IN THE UNITED STATES DISTRICT COURT
FOR THE SOUTHERN DISTRICT OF WEST VIRGINIA
CHARLESTON DIVISION
Master File No. 2:12-MD-02327

IN RE: ETHICON, INC.
PELVIC REPAIR SYSTEM,
PRODUCTS LIABILITY
LITIGATION

MDL No. 2327

This Document Relates to:

Carolyn Lewis, Et Al v. Ethicon, Inc. Case No. 2:12-CV-04301

\_\_\_\_\_

IN THE DISTRICT COURT, 95th JUDICIAL DISTRICT DALLAS COUNTY, TEXAS

Linda Batiste,

Plaintiff,

v. Cause No. John Robert McNabb, M.D., DC-12-14350 Johnson & Johnson and Ethicon, Inc., Defendants.

DEPOSITION OF HOWARD C. JORDI, Ph.D.

Wednesday, October 30th, 2013

9:05 a.m.

Held At:

Jordi Lab 200 Gilbert Street Mansfield, Massachusetts

REPORTED BY:

Maureen O'Connor Pollard, RPR, CLR, CSR #149108

Golkow Technologies, Inc. - 1.877.370.DEPS

2	FOR THE PLAINTIFF CAROLYN LEWIS:	2	
3	BY: CALLE M. MENDENHALL, ESQ.	3	HOWARD C. JORDI, Ph.D.,
4	FREESE & GOSS PLLC	4	having been first duly identified and sworn, was
5	Regions Harbert Plaza 1901	5	examined and testified as follows:
6	6th Avenue North	6	DIRECT EXAMINATION
7	Birmingham, Alabama 35203	7	BY MR. THOMAS:
8	205-871-4144	8	Q. Good morning, Dr. Jordi.
9	calle@freeseandgoss.com	9	A. Good morning.
10		10	Q. I introduced myself to you before the
11	FOR DEFENDANT DR. JOHN McNABB in the Batiste	11	deposition. My name is David Thomas, and I
12	case:	12	represent the Defendants in the case. And I'm
13	BY: PHILIPA M. REMINGTON, ESQ. (AM)	13	going to take your deposition in two matters,
14	CHARLES A. ESTEE, ESQ. (PM)	14	the Carolyn Lewis matter and the Batiste case
15	THIEBAUD, REMINGTON, THORNTON, BAILEY, LLF	15	from Texas.
16	1445 Ross Avenue, Suite 4800	16	You understand that?
17	Dallas, Texas 75202	17	A. I do.
18	214-954-2210	18	Q. We're here in your offices in
19	premington@trtblaw.com	19	Massachusetts?
20		20	A. Yes, we are.
21		21	Q. And is Massachusetts your home?
22		22	A. It is.
23		23	Q. Okay. Would you state your full name
24		24	for the record, please?
25		25	A. Howard Craig Jordi.

2 (Pages 2 to 5)

	Page 6		Page 8
1	Q. And you're a Dr. Jordi, correct?	1	final, rather than looking at each and every
	A. That's correct.	2	page, he's trying to do the best he can in the
3	Q. A Ph.D doctor?	3	interest of time.
4	A. A Ph.D doctor.	4	MR. THOMAS: It's 847 pages, and I'll
5	Q. Not a medical doctor?	5	represent to you that we copied it as best we
	A. Not a medical doctor.	6	could and produced it for him, and I'm just
7	Q. And in what area is your Ph.D?	7	trying to get him to identify it as best he can.
	A. Biochemistry.	8	MR. ANDERSON: So stipulated.
	Q. What is a biochemist?	9	MR. THOMAS: The Batiste report is
	A. A biochemist is one who studies the	10	some 240 pages, and I don't expect him to go
	actions of chemicals in the body.	11	through every page, unless he wants to. But
	Q. Okay. Dr. Jordi, I've been provided	12	I'll represent that's a copy of what was
	o reports in this case. I'm going to mark as	13	supplied to me.
	position Exhibit Number 1 what's been provided	14	MR. ANDERSON: Right.
1	me as your Rule 26 expert report of Howard	15	MR. THOMAS: I'm trying to just get it
	rdi, Ph.D in the Carolyn Lewis case.	16	identified as best we can.
	A. Okay.	17	MR. ANDERSON: Right. I'm just saying
18	(Whereupon, Jordi Exhibit Number 1,	18	he's leafing through it to do the best he can
19	Rule 26 Expert Report of Howard Jordi,	19	without taking every page and looking at it in
20	PhD in the Carolyn Lewis case, was	20	detail.
21	marked for identification.)	21	A. It appears to be complete.
22	MR. THOMAS: And I'm going to mark as	22	BY MR. THOMAS:
23 Ex	hibit Number 2 what's been provided to me as a	23	Q. Okay. Dr. Jordi, how do you charge
	cument titled Final Report for Linda Batiste.	24	for your time?
25	r	25	A. I bill hourly.
	Page 7		Page 9
1	(Whereupon, Jordi Exhibit Number 2,	1	Q. And what is your hourly rate?
2	Document titled Final Report, Linda	2	A. 350 an hour.
3	Batiste, was marked for	3	Q. Is your hourly rate the same for
4	identification.)	4	whatever work that you do?
	Y MR. THOMAS:	5	A. Yes.
	Q. Okay. And let me tell you what I did.	6	Q. Have you calculated the total amount
	ose are double-sided copies because I didn't	7	dollars that you've billed for Exhibit 1, the
	re to	8	Lewis report?
9	A. I was going to say it didn't seem	9	A. We'd have to look at the receipts, the
	ck enough.	10	billings for that.
	Q. It's half as thick as you expected it	11	Q. Do you have those with you today?
12 to 1		12	A. I believe we do.
	A. Yes.	13	MR. ANDERSON: Yes.
	Q. Because I didn't care to carry all	14	BY MR. THOMAS:
	ose papers with me. These are the documents	15	Q. And the same for the Batiste matter?
	at were provided by counsel in the case.	16	A. Same.
17	Can you review those quickly, or as	17	MR. THOMAS: Okay. Ben, we'll come
	uch time as you need, and confirm for me that	18	back to that in a few minutes.
	ose are complete copies of your expert reports	19	MR. ANDERSON: Sure.
	the case?	20	BY MR. THOMAS:
21	(Witness reviewing documents.)	21	Q. Those billing records are readily
22	MR. ANDERSON: I'd just like for the	22	available, and you can determine how much it
	cord to reflect that it's an almost 800 page		
23 rec	tord to reflect that it's an annost 800 page	23	cost you to produce Exhibit 1, the report in
	port, and he's trying to leaf through it as	24	Carolyn Lewis, and Exhibit 2, the report for

3 (Pages 6 to 9)

Page 10 Page 12 1 1 A. I don't know if this has been billed Q. All right. Do you understand that 2 2 yet, but this one should be. I think we bill there are different products that are at issue 3 3 in the Lewis case and the Batiste case? monthly, so it hasn't gone out yet. 4 4 Q. When you say "this one," you're MR. ANDERSON: Objection. 5 5 referring to Exhibit 2, which is Linda Batiste? Go ahead. 6 6 A. The samples that I received I just A. Yes. sir. 7 7 received and ran by identification numbers Q. Okay. And do you have records that 8 you'd be able to get sometime during the day so 8 without regards to -- certainly the pristine 9 9 that I can tell how much time you have into it materials were identified. 10 that hasn't been billed so I know how much cost 10 BY MR. THOMAS: Q. Okay. Do you have any knowledge --11 there was for the Linda Batiste report? 11 12 12 MR. ANDERSON: I might be able to help what I'm trying to get at, Doctor, is, I'll 13 13 you. In response to your notice of subpoena, represent to you, my understanding anyway, is 14 14 the Carolyn Lewis case involves a product known the 21 categories, we did our best to try to 15 respond to those, the ones that we thought he 15 as a TVT Classic or a TVT Retropubic, and the 16 16 could respond to, and as part of that we tried Batiste case, Exhibit Number 2, I understand, 17 to get as up to date a billing as we could for 17 involves a product known as a TVT Obturator or you, and that would include as much of Batiste 18 18 TVT-O. 19 as possible, at least up until last week. 19 Do you know that? 20 MR. THOMAS: Okay. 20 A. No. That wasn't represented to us, as 21 21 MR. ANDERSON: So that's -- we've far as I'm concerned. 22 Q. As far as you're concerned --22 tried. And I think that you'll be able to look 2.3 23 at it, and from the dates be able to tell A. It's an explant. 24 whether or not it includes anything this week or 24 Q. Okay. In the work that you did in 25 25 these matters, does it concern you at all not. Page 11 Page 13 1 MR. THOMAS: Perfect. 1 whether this is a TVT Classic or a TVT Obturator 2 BY MR. THOMAS: 2 or a TVT Retropubic or TVT-O? 3 Q. For the Carolyn Lewis case, your final 3 A. No. They're all polypropylene, and in 4 report in Exhibit Number 1, is that a complete 4 that sense, for that reason, no. 5 copy of the report of the opinions that you 5 Q. Is it fair to understand, Doctor -intend to give in the Carolyn Lewis case? 6 б just trying to do something to make this easier, 7 7 A. It is. believe it or not -- is it fair to understand, 8 8 Q. Do you have any intention of doing any Doctor, that the work that you did in analyzing 9 additional work prior to testifying in trial in 9 the mesh explants and the mesh controls that's 10 this case in connection with new opinions for 10 represented in Exhibit Number 1 and Exhibit 11 the Carolyn Lewis case? 11 Number 2 do not depend on the type of product MR. ANDERSON: I'm just going to 12 that you were analyzing? 12 13 object, because as counsel knows, we have a 13 MR. ANDERSON: Objection. 14 right to do rebuttal reports in this case, so he 14 Go ahead. 15 may not even understand that. And so with that 15 A. As a polymer chemist and having 16 caveat, that as he sits here today. 16 studied polypropylene, among others, for my A. To my knowledge, this is complete, and 17 lifetime of work, basically polypropylene is 17 18 this is what I will be using. 18 polypropylene is polypropylene, so it's going 19 to -- if it's polypropylene it's going to have 19 BY MR. THOMAS: 20 Q. Same question with respect to Linda 20 the characteristic reactions of polypropylene. 21 21 Batiste, Exhibit Number 2; does Exhibit Number 2 BY MR. THOMAS: 22 represent a complete report of the opinions that 22 Q. Did the work that you did for Exhibit 23 you're prepared to give in the Linda Batiste 23 Number 1 differ from the work that you did in 24 case? 24 Exhibit Number 2 because of the name of the 25 product that was analyzed in each case? 25 A. Yes.

4 (Pages 10 to 13)

Page 14 Page 16 A. Did not. 1 BY MR. THOMAS: 1 2 2 Q. Absolutely. I'm sorry. 3 3 A. Do I need to reference this one, MR. ANDERSON: Go ahead. That's fine. 4 BY MR. THOMAS: 4 because it's not marked? 5 Q. And what were you trying to do when 5 MR. ANDERSON: You can look at 6 6 you -- what were you asked to do in Exhibit anything. 7 7 Number 1? A. It's this. I just want to make sure I 8 A. We were asked to compare pristine mesh 8 have all of the techniques referenced here that 9 9 samples and explant samples and determine I did. 10 whether or not there were differences; and if 10 We did optical microscopy as well to 11 11 there were, what they were. see if there were any obvious differences, and 12 Q. What did you understand to be the 12 to just look at the shape of the fibers. 13 13 differences that you were looking for? GPC. I think we got them all. A. I wasn't told to look for any specific 14 14 MR. ANDERSON: Did you say GPC? 15 differences. I was told to look for 15 A. Gel permeation chromatography. GPC 16 16 differences, if there were any. for molecular weight. 17 Q. And how did you set out to determine 17 BY MR. THOMAS: 18 whether there were differences between the 18 Q. How did you determine what tests to 19 explants and the pristine samples that you'd 19 conduct on the mesh that you analyzed in Exhibit 20 received? 20 Number 1? 21 21 A. Given the knowledge that it was A. I've analyzed these kinds of materials 22 22 polypropylene, classic tests that we would since 1980. In this particular business we 23 23 typically run on any polypropylene would be built -- I founded this company, and so it's 24 molecular weight, to see if it degraded in terms 24 just years and years of experience. 25 of its molecular weight. 25 Polypropylene has to be stabilized because it's Page 17 Page 15 1 We would look for additive content. a reactive polymer. That information goes back 2 because that stabilizes polypropylene. 2 at least to the '60s. So you've got to look for 3 How am I doing speed-wise? 3 the antioxidants, the presence or lack thereof. 4 So we did additives analysis. 4 GPC is to determine the molecular weight, as I 5 We would do DSC to look for 5 said. DSC is to determine the melt point and 6 б the FLP at melt, which correlates with percent crystallinity. 7 7 We did SEM to look for cracks. crystallinity. SEM is a means of looking at the 8 8 We did SEM-EDX to look for elemental physical shape of the fibers. So these are just 9 composition. Specifically we were looking for 9 standard techniques that we used. So we chose 10 differing oxygen levels which would indicate and 10 standard techniques that I would use for any 11 correlate with oxidation, if present. 11 such type of analysis. We did FTIR analysis to look for 12 Q. Type of such analysis, what do you 12 13 presence of carbonyls. And we specifically 13 mean by that? 14 there wanted to find out whether the flaking 14 A. Well, in our company we analyze any 15 material, once we saw it from the SEM, was 15 kind of polymer. So we analyze polystyrene one 16 polypropylene or not, what was the composition, 16 day, we analyze contact lens materials another 17 chemical composition of the flakes that were day, we analyze polypropylene, some of which 17 18 coming off the polypropylene fibers. I'm trying 18 have been implanted in the human bodies, hips 19 19 to think. and so on on another day. You could really call 20 So we also ran PYMS. That's another 20 us a materials lab. 21 21 technique to look for additives, presence of Q. Okay. What I'm trying to understand 22 additives. 22 is when you got this request from Mr. Anderson 23 I need to --23 and his associates and they asked you to analyze 24 MR. ANDERSON: Do you want to 24 this polypropylene material both as an explant 25 25 reference your report? and as a pristine sample, did you go to the

5 (Pages 14 to 17)

Page 18 Page 20 shelf and pull off a list and say "I'm going to 1 1 Engineers, yes. 2 2 Q. And for what purpose do you cite do this list of tests"? 3 3 A. No, because I already knew it from Dr. Müller, is that the additives analysis? 4 4 experience. A. There would be additives analysis, 5 5 stabilization of various polymers, polypropylene Q. Okay. 6 6 A. We would do this type of work for any being one of them. 7 7 Q. Are there any other texts or client. 8 Q. So the tests that you identified for 8 authorities upon which you rely to identify the 9 9 purposes of your report in both Exhibits 1 and tests that you need to contact on the explants 10 Exhibits 2 are based upon your training, 10 and the pristine samples? 11 11 education, and experience, as opposed to any A. To identify the tests needed? 12 Q. Yes. 12 reference guide that you may have looked to to 13 13 determine what tests you may have run, is that A. Well, reading 400 pages of literature, 14 14 and part of it is just the body of knowledge fair? 15 A. Well, I have reference guides. I mean 15 that you get from reading all of the literature. 16 16 I have books. I do continue to -- reading is an Everyone in the last -- starting back -- going 17 ongoing learning technique I continue to use, 17 back to the '60s has used these techniques. 18 and always will. 18 Q. Okay. Q. Sure. 19 19 A. Some of them, of course, are more 20 A. But no, I wouldn't need to read those 20 modern today, obviously, than they were in the 21 21 books to pop up with the techniques because '60s. Today we have available FTIR microscopy, 22 22 they're standard in the industry. which we can look at a tiny sample. We didn't 23 23 Q. Is there a place where I could go have that available them. LCMS didn't exist in 24 to -- if they came to me and said "Mr. Thomas, I 24 the '70s and '60s, does now. So some of these 25 want to have these polypropylene tests run on 25 techniques have come along in terms of Page 19 Page 21 1 this pristine control and this explant, what 1 development that are available today that tests should I run?" Is there a place where you 2 2 weren't available prior times. But, again, 3 could direct me to figure out what would be the 3 today it's just -- every paper you read they 4 appropriate tests to identify the differences 4 use -- we use some of the same methods. LCMS is 5 between the explants and the controls? 5 one of the bright and shining stars today that's 6 б MR. ANDERSON: Objection as to form. come -- really come on strong in the last 7 7 20 years, 10 to 20 years. Go ahead. 8 8 Q. Real simple question, hopefully it's a A. There's probably chapters like that, 9 books on chemical analysis that would suggest 9 simple answer. 10 methodologies. 10 Can you direct me to any authority, 11 Generally you have a body of 11 textbook, article, whatever you use in your experience developed over many years, you 12 business and in your expertise, that would 12 13 just -- at this point in my life, I would know 13 identify the tests that you would do to detect 14 the differences between an explanted piece of 14 that I need to look up additives, for example, 15 but then I would go to the Dr. Müller text which 15 polypropylene mesh and a pristine control of the 16 is in our reference list to look up how 16 mesh? 17 17 additives were used in various materials, and I MR. ANDERSON: Objection. Asked and answered. 18 would look under polypropylene, and I would find 18 19 what additives are typically used for 19 Go ahead. 20 polypropylene specifically. So I'd know what to 20 A. I don't know of any such text that 21 21 look for. just has a single page where it lists -- if I want to know about thermal methods, I'd go to 22 BY MR. THOMAS: 22 23 Q. And you're referring to a text cited 23 Edith Turi that I've cited. If I want to know 24 in your report by a Dr. Müller? 24 about GPC, I'd go to Modern GPC chromatography 25 25 A. Dr. Müller, Society of Plastics text that I have. I have all these individual.

6 (Pages 18 to 21)

Page 22 Page 24 1 1 And if you go to -- Odiam, for that you analyzed? 2 2 example, would be another one that's a common A. Well, SEM would be certainly a major 3 3 text that's used in polymer chemistry training methodology. It gives you a visual observation 4 4 sessions at like University of Connecticut where of -- I'd have to add SEM to the term 5 my son got his doctorate, he took -- he used 5 degradation, but it's a visual measurement as 6 6 that text. In that text you will see a chapter opposed to a chemical measurement. 7 7 on DSC, you will see a chapter on GPC, you'll Q. Okay. 8 see a chapter on IR, you'll see all these 8 A. But it makes it very obvious if 9 9 various techniques. something is degrading or not. 10 But it might not include every one I 10 Q. Other than degradation as you have 11 11 just defined it, and the SEM visual observations used. I don't know that I can say -- I don't 12 think I can say there's any one book that has 12 that you've just described, did you look for any 13 other differences between the polypropylene in 13 every single method in it necessarily. 14 14 Q. Is it fair to understand, Doctor, that the control samples and the polypropylene in the 15 each of these tests that you ran were designed 15 explanted mesh? 16 16 to detect any differences between the control A. I'm not sure I understand how to 17 sample of the mesh and the explant sample of the 17 answer that question. We looked for differences 18 18 which included all the tests that we've mesh? 19 A. That was the entire intent of the 19 discussed; the molecular weight analysis, the 20 proceeding, as far as I understood it. It was 20 additives. 21 21 just to look for differences, if there were any. Q. Don't all -- my question is; all the 22 tests that you ran are designed to determine the 22 Q. Okay. What is degradation? 23 23 A. Well, degradation would be the loss of extent to which the polypropylene degraded, is 24 functionalness of, in this case, a polymer for 24 that fair? 25 its intended purpose. 25 A. Or could degrade. For example, if Page 23 Page 25 1 Q. Okay. 1 additives, antioxidants come out of the 2 A. That could include things like 2 polypropylene, initially it may not be degraded, 3 oxidation, or environmental stress cracking. It 3 so I can't say that's degradation in and of 4 could include mechanical degradation. For 4 itself. 5 example, when products are -- waste materials in 5 However, once the antioxidants are out б the manufacturing process are re-used, they make б of the polypropylene, it is now vulnerable to 7 7 pellets out of the re-used material and they oxidation. So it's a very valid technique in 8 8 call it regrind, and each regrind cycle tends to predicting the longevity, the functionalness of 9 degrade the polymer, so that's a type of 9 the product. 10 degradation. 10 Q. Okay. So can we define it this way; 11 Q. Other than degradation as you've just 11 that the tests that you ran, as you've just defined it, did you look for any other 12 identified them, were designed to determine the 12 13 differences in the polymer in the control sample 13 extent to which the polypropylene in the 14 14 as compared to the polymer in the explant? explanted mesh had degraded as compared to the 15 A. Can I have the question repeated, 15 control, and the extent to which it might please? degrade in the future? 16 16 17 A. I like that better. 17 Q. Sure. 18 Other than the degradation as you've 18 Yes. just defined it, did you look for any 19 19 Q. Okay. And you named three kinds, you 20 differences -- I'm going to change the question 20 named oxidation, environmental stress cracking, 21 because I'm going to use a different term. 21 and mechanical degradation, is that fair? 22 Other than degradation as you've just 22 A. That's correct. 23 defined it, did you look for any differences in 23 Q. Your paper, your report discusses a 24 the polypropylene in the control sample as 24 bunch of other types of degradation. Can we 25 25 compared to the polypropylene in the explant focus on these three as being those types of

7 (Pages 22 to 25)

	Page 26		Page 28
1	degradation at which you looked for purposes of	1	the
2	both Lewis and Batiste?	2	(Witness reviewing documents.)
3	A. Well, right. You would have you	3	A. So the control samples were received
4	could have UV light degradation, but that	4	for analysis in sealed packaging.
5	wouldn't be applicable to this case.	5	BY MR. THOMAS:
6	Q. The answer to my question, can we	6	Q. My question is pretty simple, I think.
7	limit our questions in this case to oxidation,	7	Maybe it's not. Page 12, you talk about sample
8	environmental stress cracking, mechanical	8	preparation.
9	degradation, and the SEM visual analysis of	9	A. Right.
10	these meshes?	10	Q. Where did you go to determine how to
11	MR. ANDERSON: Objection.	11	prepare your sample for preparation for your
12	Go ahead.	12	analysis? Did you consult any text, or are
13	A. Well, I want to be able to include	13	there standard methodologies that you use to
14	FTIR, for example.	14	prepare your samples for the testing that you're
15	BY MR. THOMAS:	15	going to do?
16	Q. But FTIR is designed to discuss	16	A. Well, in the case with polymers like
17	A. Show oxidation.	17	this, we have a balance area, we have a standard
18	Q. Right.	18	area with an optical microscope, and we have
19	A. I think we're in pretty good shape	19	scalpels, and we have tweezers, and disposable
20	there.	20	scalpels, and aseptic tweezers, that's just our
21	Q. Okay. All I'm trying to do is make	21	SOP.
22	this shorter instead of longer. And so I'm not	22	And so we would cut the samples, cut
23	trying to trick you at all, believe it or not.	23	off little pieces for various because
24	All right. So you received first	24	different methods require different amounts of
25	of all, who hired you in this case?	25	sample.

ANDERSON: Objection. Do you want to talk about the control or the mesh? MR. THOMAS: Both. MR. ANDERSON: Okay. MR. THOMAS: I'll do it first. BY MR. THOMAS: Q. How did you determine how to prepare your control samples for testing? A. Well, with the control samples we had more material, boxes came in, and we had	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	Q. Did you rely on your own internal standard operating procedures for your sample preparations for the tests that you conducted?  A. Yes.  Q. Are the standard operating procedures that you have for Jordi Labs to conduct this analysis in writing?  A. Most of them are, yes. As far as I don't know if we have an SOP, I have to check on that, for actual cutting of the samples.  MR. ANDERSON: He just said "preparation." So I'm not sure  THE WITNESS: That is preparation, yes.  MR. ANDERSON: Fair enough.  BY MR. THOMAS:  Q. And how would you describe the standard operating procedures for Jordi Labs, if I wanted to identify them to get them at a later time, that you did for sample preparation?  A. I don't know if we have a written for sample preparation as far as just cutting the samples. We have SOPs like for GPC, how to
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	A. Mr. Anderson. Q. And you've already described what Mr. Anderson asked you to do. And you determined on your own what battery of tests to conduct in order to evaluate the control mesh against the explanted mesh, correct? A. That's correct. Q. When you received the samples that you were to compare, I'm talking about the control samples and the mesh explant samples, how did you determine how to prepare those samples for testing? MR. ANDERSON: Objection. Do you want to talk about the control or the mesh? MR. THOMAS: Both. MR. ANDERSON: Okay. MR. THOMAS: I'll do it first. BY MR. THOMAS: Q. How did you determine how to prepare your control samples for testing? A. Well, with the control samples we had	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	Q. Did you rely on your own internal standard operating procedures for your sample preparations for the tests that you conducted?  A. Yes.  Q. Are the standard operating procedures that you have for Jordi Labs to conduct this analysis in writing?  A. Most of them are, yes. As far as I don't know if we have an SOP, I have to check on that, for actual cutting of the samples.  MR. ANDERSON: He just said "preparation." So I'm not sure  THE WITNESS: That is preparation, yes.  MR. ANDERSON: Fair enough.  BY MR. THOMAS:  Q. And how would you describe the standard operating procedures for Jordi Labs, if I wanted to identify them to get them at a later time, that you did for sample preparation?  A. I don't know if we have a written for sample preparation as far as just cutting the

8 (Pages 26 to 29)

Page 30 Page 32 1 1 the samples are passed to each specific analyst. Q. Continuing on Page 12, you discuss 2 2 But as far as -- I have a whole pile of SOPs taking a sample of each control material, about 3 3 over here for you for each of those methods. 100 milligrams, placing it in formalin, 4 4 Q. Okay. Probably what I'll do during 90 milliliters and heat it at 60 degrees 5 5 lunch. centigrade for 48 hours. "In my experience, 6 6 MR. ANDERSON: That's why the question this temperature would be expected to provide an 7 7 is a little tough. When you're saying sample accelerated rate of aging and is consistent with 8 preparation, there's all these different tests 8 other published methods for this purpose." 9 9 that were done, so the question embodies a lot What does that mean? 10 of things. I didn't want to keep objecting. 10 A. Well, the samples have been sitting in 11 11 MR. THOMAS: I appreciate that. storage at Steelgate for some time, we don't 12 BY MR. THOMAS: 12 know how long exactly, at least I don't. The --13 so if it had been in Steelgate for a month, and 13 Q. On Page 12 of your report, under "Sample Preparation," you discuss a "Control Experiment." It says "The control samples were 14 14 we put it in formalin here for a day, it 15 15 wouldn't be equivalent treatment. So to get it 16 16 also used as part of a control experiment as close to being equivalent treatment as we 17 designed to provide an indication as to the 17 could we tried to -- in effect, we tried to 18 18 effects of formalin storage." accelerate any potential aging by running it at 19 Why did you conduct a control 19 -- like doing the storage at 60 for 48 hours, so 20 experiment designed to provide indication as to 20 it would be more like the treatment that it 21 21 the effects of formalin storage? would have received for, say, a month, or 22 22 whatever the time was, from Steelgate. A. The samples received from Steelgate 23 23 came informally, they were shipped to us that Q. You cite to two references for this 24 way, and we wanted to know what effect formalin 24 process, it's the ASTM Standard D3045, and the 25 would have on pristine polypropylene, or not, as 25 Inoue paper, 1961, the Journal of Polymer Page 31 Page 33 1 the case might be, so we wanted to rule out any 1 Science on Page 13 of your report. 2 potential oxidation caused by formalin of the 2 A. Correct. 3 explants that were slipped to us, so we tried 3 Q. Do those two references support using 4 the controls the same way. 4 60 degrees centigrade for 48 hours to replicate 5 Q. What is it about formalin that caused 5 the aging process of polymer controls? 6 б you to be concerned about potential oxidation to A. Well, various methods are used. But 7 7 in general the principle -- definitely supports the mesh? 8 8 A. Nothing specifically. It's just good the principle. Various temperatures and times 9 lab practice to make sure that you treat -- if I 9 are given for various polymers, and so this was 10 want to compare a pristine mesh with an explant, 10 just trying to follow the principles. Q. What age of explants in formalin does 11 I want the pristine mesh that I'm calling a 11 12 60 degrees centigrade for 48 hours for the 12 standard to be treated identically, period, as 13 much as I possibly can control it, to the 13 controls represent? explant material. Since the explant was in 14 14 A. As to age at room temperature, 15 formalin, it's wise to put your control in 15 specifically I don't know. 16 formalin so they're treated identically. So any 16 Q. Okay. Why did you choose 60 degrees 17 differences then seen can't be attributed to the centigrade for 48 hours? 17 18 formalin treatment, if there was any. I didn't 18 A. Because that was consistent with these 19 two references that would be recommended. If it 19 know there was or not. But that is just good 20 lab practice to me. 20 doesn't show -- the point being if it doesn't 21 21 Q. As a biochemist, are you aware of any show up in this temperature in this amount of 22 chemical reaction issues associated between 22 time, it likely isn't going to react. 23 formalin and polypropylene that may affect the 23 Q. Okay. So is it fair to understand 24 chemical properties of polypropylene? 24 that the 60 degrees centigrade for 48 hours is 25 25 A. In general, no. not designed to reflect any specific time that

9 (Pages 30 to 33)

Page 34 Page 36 1 to preserve their explant samples? 1 the explants may have been in formalin, but 2 2 designed to determine if the formalin would have A. Because it's a preservative. 3 3 Q. When you say "preservative," does that any degradation on the controls at any time? 4 4 A. It was determined -- it was an attempt have a chemical meaning to you? 5 5 to determine if formalin would react with A. It has a more of a biological meaning. 6 6 The formaldehyde preserves tissue and preserves polypropylene. 7 7 anything from anything that's in it, from Q. And what did your experiment conclude? 8 A. All the tests, SEM, and all the rest 8 bacterial growth which would degrade biological 9 9 of the tests, FTIR, showed no change. materials. 10 Q. So is it your conclusion from that 10 Q. Okay. You said two things there, as I 11 analysis that formalin has no chemical impact on heard it. I'm going to do the second one first. 11 12 polypropylene? 12 You said it prevents bacterial growth. Tell me what that means, please. 13 13 A. That's correct. 14 14 A. Well, in tissue, if you have -- by Q. Have you done any research to 15 determine the extent to which formalin has any 15 itself it just will pick up bacteria from flies 16 16 impact on polypropylene? landing on it or just from the air, and then it 17 A. No, I have not. 17 will begin to degrade. Q. Okay. So it would be the influence of 18 18 Q. Formalin is --19 A. Other than the test. 19 the outside bacteria growing on the explant that 20 MR. ANDERSON: What did you say? 20 may have an impact on the chemical composition 21 21 A. Other than this test, of course. of the explant, is that fair? 22 22 BY MR. THOMAS: A. That's one piece of it. But another 23 23 Q. Formalin is a mixture of formaldehyde? piece would be if there were bacteria in the 24 A. Yes. 24 tissue -- for example, if there were an 25 Q. Did you do any research to determine 25 infection in the mesh that was taken out, that Page 37 Page 35 1 the extent to which formaldehyde had any would be bacteria, it could continue to grow as 2 chemical impact on polypropylene? 2 well. I can't sort that out. 3 A. Well, in all the published literature, 3 Q. Okay. The other thing you said, as I 4 I looked at all these articles, I read over 400 4 wrote it down, is that formaldehyde preserves 5 pages, various authors determined -- did various 5 tissue. 6 б studies of explanted materials. Everybody in How does formaldehyde preserve tissue? 7 7 the world, as far as I can see, treats their A. It makes for an aseptic environment. 8 8 samples with -- or essentially everyone uses Bacteria can't grow in it, so hence, there's no 9 formaldehyde as a preservative. If you didn't 9 degradation. 10 do that, you would allow for potential bacterial 10 Q. So it's actually consistent with your second point, and that is it arrests the 11 growth and things like that that might degrade 11 12 development of bacteria to prevent any 12 the polymer. 13 Q. My question was different. 13 degradation of the explant, is that correct? 14 Dr. Jordi, did you do any research to 14 A. That's the intent, yes. 15 determine the extent to which formaldehyde can 15 Q. Are you aware of any chemical reaction have a chemical reaction with and degrade 16 that formaldehyde has with proteins that may be 16 17 17 polypropylene? on explants? A. No. 18 18 A. Absolutely. Formaldehyde is an 19 aldehyde, and it will react with any things like 19 MR. ANDERSON: Objection. 20 BY MR. THOMAS: 20 amines. It can react with any other reactor 21 21 Q. A minute ago you said that everyone group that typical aldehydes with react with. uses formaldehyde to preserve their -- what? 22 22 Q. As a part of your analysis in this 23 A. Their explant samples. 23 case, did you study the impact of formaldehydes 24 Q. Okay. And do you have an 24 on any proteins that may be on explanted meshes? 25 25 understanding of why everyone uses formaldehyde A. No, we did not.

10 (Pages 34 to 37)

Page 38 Page 40 Q. Did you consider that issue at all in 1 1 I'll explore each of those in a little more 2 2 your analysis? detail rather than going through the report and 3 A. No. 3 finding each one. 4 4 Q. Doctor, you identified three types of Does that make sense? 5 5 degradation which you analyzed in connection MR. ANDERSON: Your question was all 6 6 the evidence of oxidation, so that made it a with your work in Exhibits 1 and 2, and one was 7 7 oxidation, the second was environmental stress little tougher. 8 cracking, and the third was mechanical 8 MR. THOMAS: I'm sorry. I'm not very 9 9 degradation, correct? smart sometimes. 10 A. Yes. 10 MR. ANDERSON: It's not about smart. Q. What evidence in your testing for 11 11 I think he wants a more general 12 Exhibit 1 for the Lewis case did you find 12 question to begin with, and then he'll go into 13 oxidation? 13 the --14 14 A. For that we're going to have to go to A. Well, SEM-EDX, for sample, showed --15 15 SEM-EDX showed increased oxygen levels in the the report. 16 16 cracked region that we just talked about. MR. ANDERSON: Anything you need to 17 reference in your report you can reference it. 17 BY MR. THOMAS: A. Well, the first thing we saw -- that 18 18 Q. Okay. 19 we looked at was SEM, and then that's coupled 19 A. And you don't want to talk about 20 with SEM-EDX, so we'll look at a couple SEM 20 figures at this point? 21 21 charts first. Q. No. 22 A. Just concepts? 22 Page 26 shows a typical explanted 2.3 23 sample. Figure 16 shows transverse cracks of Q. Exactly. Thank you. 24 surface polypropylene. 24 A. All right. I'll try to do my best, 25 BY MR. THOMAS: 25 sir. Page 39 Page 41 Q. You're doing fine. 1 Q. Let me stop you there, if I can. Are 1 2 you finished? 2 A. DSC showed a decrease in the heat 3 A. Yes. 3 effusion, and a decrease in the melt temperature versus non-cracked material. That correlates 4 Q. I don't want to interrupt you. 4 5 The surface cracking that you just 5 with environmental stress cracking, because the described on the record, this is your visual 6 б Delta H at melt correlates with the amount or 7 7 observation that you talked about before that the percentage of crystallinity, and hence the 8 8 you believe is evidence of oxidation, is that percentage of amorphous materials, which allows 9 correct? 9 things like cholesterol and cholesterol esters 10 10 A. This is visual evidence of either and fatty acids to get into the cracking. FTIR microscopy dearly showed -- by 11 oxidation or environmental stress cracking, or 11 12 using the microscopic version of FTIR, coupled, 12 both, and by itself it can't tell you the 13 difference. 13 we were able to actually take IRs of each flaked 14 14 Q. Got you. piece, and this flaked piece clearly showed 15 But it's strictly visual? 15 protein and polypropylene. And since the A. This one is visual, yes, sir. 16 polypropylene bands are weaker than carbonyl 16 Figure 22 is another good example. 17 bands, they're alkyl, absorbance bands versus 17 18 Q. What page are we on, please? 18 carbonyl, this chart that I'm looking at of this A. 29. Flaking polypropylene pieces. 19 19 particular flaked piece would be estimated to be 20 Q. Now, you can do whatever you want to, 20 about 75 percent or so polypropylene, maybe 21 21 I'm looking for -- perhaps it would be easier 25 percent protein. this way. You don't have to do all the figures Q. Okay. 22 22 23 that talk about visual observations. What I'm 23 A. Because they're both there. 24 looking for specifically is each type of 24 Q. And just generally for now, we'll go 25 specifically to those issues later. 25 oxidation that you found in your report, then

11 (Pages 38 to 41)

	Page 42		Page 44
1	A. Okay. The molecular weight averages	1	BY MR. THOMAS:
2	that were determined showed basically no	2	Q. Yes.
3	difference between cracked samples and pristine.	3	A. Generally the percentage of oxygen in
4	Q. Help me there.	4	oxidized polypropylene, at least initially, is
5	A. And formalin treated.	5	in the low percent range. So it doesn't take
6	Q. That is not evidence of oxidation, is	6	very much increase in oxygen in polypropylene to
7	it, the fact that they're the same?	7	cause embrittlement, rigidity, and those kind of
8	A. Are you asking only for evidence of	8	effects. Those are caused by presence of
9	oxidation?	9	ketones and aldehydes as the oxidation goes on,
10	Q. Correct.	10	carboxylic acids if it goes far enough.
11	A. Okay. We'll skip that.	11	Q. Doctor, my question is a little more
12	Q. Just so we're clear	12	specific than that.
13	A. Right.	13	Did you attempt to measure the extent
14	Q the molecular weight analysis you	14	of oxidation in any of the mesh implants
15	did is not consistent with oxidation?	15	quantitatively?
16	A. In and of, and by itself it is not.	16	A. It would be relative quantitation,
17	Q. Thank you.	17	comparing control versus explant.
18	A. PYMS showed generally a lack of or	18	Q. Did you express any measurement of
19	very great minimization of both Santonox R and	19	oxidation in the explants compared to the
20	lauryl thiodipropionate.	20	controls in your report?
21	Q. Okay. And those are antioxidants?	21	A. I'm sorry, can you repeat the
22	A. Those are the two antioxidants that	22	question?
23	are in the formulation, in the recipe from	23	Q. Did you set forth any opinion as to
24	Ethicon.	24	the extent of oxidation from the explants
25	Q. Is it fair to understand, though, that	25	measured quantitatively in your report?
	Page 43		Page 45
1	the PYMS analysis does not show oxidation, but	1	MR. ANDERSON: Objection.
2	is part of your earlier analysis about potential	2	Go ahead.
3	future oxidation?	3	A. Again, it was a relative thing, so I
4	A. That's correct, it is. Okay.	4	don't know that I can say. It would be
5	Q. So the PYMS analysis itself does not	5	quantitative.
6	show oxidation of the polypropylene in the	6	But, for example, pristine
7	explants?	7	polypropylene didn't show any carbonyl to 1760,
8	A. It shows vulnerability to oxidation is	8	1740 that we could see. But the explants did.
9	what it shows.	9	BY MR. THOMAS:
10	Q. It does not show any oxidation in the	10	Q. Did you attempt to measure in that
11	explants?	11	context the extent to which the carbonyl issue
12	A. In and of itself, no.	12	had any impact on the ability of the
13	Q. Thank you.	13	polypropylene to function for its intended
14	Have we covered the basics on the	14	purpose?
15	oxidation?	15	A. All oxidation is bad. It's a relative
16 17	A. I think so.	16	determination. So you would hope there wouldn't
/	Q. For those places where you found	17	be any carbonyl observed, is what you would look
		18	for if the material is good.
18	evidence of oxidation, as you've just described	1 1 1	
18 19	and as reflected in your report, were you ever	19	Your question, I'm sorry.
18 19 20	and as reflected in your report, were you ever able to measure the extent of antioxidation of	20	Q. Might have been a bad question. Let
18 19 20 21	and as reflected in your report, were you ever able to measure the extent of antioxidation of the explants that you analyzed?	20 21	Q. Might have been a bad question. Let me see if I can do it again.
18 19 20 21 22	and as reflected in your report, were you ever able to measure the extent of antioxidation of the explants that you analyzed?  MR. ANDERSON: Objection.	20 21 22	Q. Might have been a bad question. Let me see if I can do it again. In your analysis of oxidation, did you
18 19 20 21 22 23	and as reflected in your report, were you ever able to measure the extent of antioxidation of the explants that you analyzed?  MR. ANDERSON: Objection. Go ahead.	20 21 22 23	Q. Might have been a bad question. Let me see if I can do it again.  In your analysis of oxidation, did you ever measure the extent to which the
18 19 20 21 22	and as reflected in your report, were you ever able to measure the extent of antioxidation of the explants that you analyzed?  MR. ANDERSON: Objection.	20 21 22	Q. Might have been a bad question. Let me see if I can do it again. In your analysis of oxidation, did you

12 (Pages 42 to 45)

	Page 46		Page 48
1	A. In a relative quantitative way is all	1	they were handed to the appropriate technician
2	we did.	2	to do the sampling that's described in the
3	Q. And tell me what that means.	3	photograph. They're removed now you're
4	A. Well, that means if I have a peak for	4	talking about the actual
5	carbonyl, I have like if I had no peak in the	5	Q. Explants, correct.
6	pristine and I have a peak, a measurable peak in	6	A explant.
7	the explant, then I can say with certainty that	7	Received tissue bundles.
8	the explanted material is more oxidized than the	8	Q. You're on page?
9	pristine.	9	A. Now I'm on 16.
10	Q. Are we talking about oxidation to the	10	Q. Thank you.
11	extent that it compromises the ability of the	11	A. And little pieces were cut off with
12	polymer to function for its intended purpose?	12	disposable scalpel. And the picture on the
13	A. The only way I know to answer this is	13	right I'll wait for you to get there if you
14	in science we would pool multiple methods. I	14	want.
15	have to look at the SEM photographs and look at	15	Q. I'm fine. Go ahead.
16	the carbonyl levels and try to correlate the	16	A. Little pieces were cut off, and that's
17	carbonyl with the degree of damage actually	17	what was then repackaged in formalin for
18	observed physically in the SEM. So that's the	18	shipment for SEM.
19	kind of thing what I mean by "relative."	19	Q. Okay. As we look on Page 16, there
20	Q. Do you have an opinion as you sit here	20	are four photos there in Figure 2. The top left
21	today, based on your training, education,	21	photo in Figure 2 is the way that you received
22	experience, and review of the materials in this	22	the sample?
23	case, of the extent to which the polypropylene	23	A. Yes.
24	in the mesh explants oxidized in the context of	24	Q. Dumped out of container, is that fair?
25	the loss of functionalness for its intended	25	MR. ANDERSON: Objection.
	Page 47		Page 49
1	purpose?	1	A. Yes.
2	A. Yes, I do.	2	BY MR. THOMAS:
3	Q. Okay. What is that opinion?	3	Q. I'm sorry, I'm trying to be casual.
4	A. The material appears degraded, some of	4	Excuse me. That was a bad question.
5	it severely degraded. There's a range from	5	Mr. Anderson is exactly right.
6	sample to sample. And in two cases of 23	6	Dr. Jordi, is it fair to understand
7	samples that we ran, we didn't see any damage.	7	that the top left on Figure 16 reflects the
8	91 percent of the time we did.	8	samples as received before you did anything to
9	Q. Are you talking now about your visual	9	them?
10	observations through the scanning electron	10	A. That's correct.
11	microscopy?	11	Q. And how did you separate the mesh in
12	A. Yes, correlating that, of course, with	12	the lower left-hand corner in Figure 2 from the
13	the carbonyls.	13	tissue that appears on the lower right-hand
14	Q. I'm talking about the analysis that we	14	corner of Figure 2?
15	strike that. Let me come back to that.	15	A. We utilized forceps to pull the tissue
16	Doctor, let's go back to your sample	16	off of the sample. As you can see, in the left
17	preparation. That's what happens when I find	17	bottom picture there are little bits of tissue
18	rabbit holes.	18	left.
19	What steps did you take to prepare the	19	Q. Who did that? Did you do that?
			A A 1' TZ 1 ' 7D 1 1 4 1
20	explants that you received for analysis?	20	A. Adi Kulcarni. Took about an hour a
21	explants that you received for analysis?  MR. ANDERSON: Objection.	21	sample.
21 22	explants that you received for analysis?  MR. ANDERSON: Objection.  Go ahead.	21 22	sample. Q. And did you use forceps in each hand,
21 22 23	explants that you received for analysis?  MR. ANDERSON: Objection.  Go ahead.  A. Well, the samples were received at our	21 22 23	sample. Q. And did you use forceps in each hand, is that how you do that? Or how do you do that?
21 22	explants that you received for analysis?  MR. ANDERSON: Objection.  Go ahead.	21 22	sample. Q. And did you use forceps in each hand,

13 (Pages 46 to 49)

	Page 50		Page 52
1	Q. Hold it in his hand?	1	Dr. Kulcarni about the methodology to separate
2	A. No. With forceps.	2	the tissue from the mesh?
3	Q. So you've got the forceps?	3	A. No. It appeared very gentle, as good
4	A. Two, yes.	4	as we could possibly do.
5	Q. Two forceps.	5	Q. Okay. Other than separating the
6	Is there a Jordi standard operating	6	tissue from the mesh, as you've just described
7	procedure about how to remove tissue from mesh?	7	in Figure 2 on Page 16 of your report, which is
8	A. No.	8	Exhibit Number 1, were there any efforts made to
9	Q. How was it determined how to remove	9	otherwise treat the mesh prior to testing?
10	the tissue from the mesh?	10	A. No.
11	A. Well, the technique was to remove the	11	Q. For the tissue sample that appears in
12	tissue touching the as little as possible the	12	the upper left of Figure 2 on Page 16, was there
13	mesh itself so that you wouldn't cause any	13	any discussion about trying to clean that
14	damage to it.	14	sample?
15	Q. Did you instruct this technician is	15	A. Well, that's what we've just been
16	that the right word?	16	discussing. This was how it was cleaned, it was
17	A. No. He's a Ph.D.	17	done with forceps.
18	Q. Did you instruct what's his name	18	Q. Okay. At any time was there a
19	again? I'm sorry.	19	discussion with Dr. Kulcarni about cleaning the
20	A. Adi Kulcarni.	20	mesh that was removed from the tissue to remove
21	Q. Did you instruct Dr. Kulcarni on the	21	proteinaceous material from the mesh?
22	method to separate the mesh from this tissue?	22	A. No.
23	A. No, I did not.	23	Q. Is it fair to understand, Dr. Jordi,
24	Q. Do you know what procedure he followed	24	that the mesh that appears on Page 16 in the
25	or what strike that.	25	lower left-hand corner is mesh that has been
	Page 51		Page 53
1	Do you know what methodology he	1	separated from the tissue without further
2	followed in order to protect the integrity of	2	cleaning?
3	the mesh and the tissue as he separated the two?	3	A. That's correct.
4	A. Well, it was set out, I believe, on a	4	Q. Did you ever consider cleaning the
5	piece of tissue so it wouldn't be contaminated	5	mesh that was separated from the tissue in order
6	with anything in the area. It was a clean work	6	to strike that.
7	area to begin with, and used aseptic forceps.	7	Did you ever consider cleaning the
8	Q. Is there a standard methodology, of	8	mesh that was separated from the tissue prior to
9	which you're aware, that tells Dr. Kulcarni how	9	conducting your tests that you did in Exhibit 1?
10	to properly separate the mesh from the tissue?	10	A. At the time this work was done, no.
11	A. I don't think so. I don't think one	11	Q. Before you did your work in Exhibits 1
12	exists. I've never seen one.	12	and 2, did you do any research into analysis by
13	Q. Did you discuss with Dr. Kulcarni how	13	other scientists in the methodology for testing
14	to appropriately separate the mesh and tissue?	14	explanted meshes?
15	A. Did I discuss with him how to do it?	15	A. I did.
16	Q. Yes.	16	Q. And what research did you do?
17	A. We discussed yes, we had	17	A. I read a number of articles, Clavé and
18	discussions. But, you know, he is a very, very	18	others.
19	careful worker.	19	Q. You read Costello?
20	Q. What was the purpose of your	20	A. Costello.
21	discussions with Dr. Kulcarni about how to	21	Q. Did you read de Tayrac?
22	separate the tissue from the mesh?	22	A. Yes.
23	A. I wanted to see the samples for	23	Q. Before you did your testing in this
24	myself. That's all.	24	case?
25	Q. Did you have any discussions with	25	A. No. It's recent.

14 (Pages 50 to 53)

	Page 54		Page 56
1	(Whereupon, Jordi Exhibit Number 3,	1	in the lower left-hand corner you have the mesh
2	de Tayrac and Letouzey article titled	2	separated from the tissue, correct?
3	"Basic science and clinical aspects of	3	A. Correct.
4	mesh infection in pelvic floor	4	Q. And you understand when the mesh is in
5	reconstructive surgery, was marked for	5	the body was in the body it was surrounded by
6	identification.)	6	materials in the body?
7	A. Are you going to de Tayrac?	7	A. That's right.
8	BY MR. THOMAS:	8	Q. Including proteins?
9	Q. Yes.	9	A. And those materials are shown in the
10	Let me show you what I marked as	10	bottom right picture. That is the material
11	deposition Exhibit Number 3. You have Exhibit	11	removed.
12	Number 3 in the materials that you brought with	12	Q. Okay. Is it your opinion that after
13	you today?	13	the mesh is separated from the tissue that
14	A. Yes, I do. I'm looking for it. Here	14	there's no longer any protein material on the
15	it is right here, de Tayrac.	15	mesh?
16	Q. When did you obtain your copy of	16	A. No, I believe there still is some
17	Exhibit Number 3, which is an article published	17	protein on the mesh. We can see it, we can see
18	in the by Renaud de Tayrac and Vincent	18	tissue, bits and pieces.
19	Letouzey, it appears in International	19	Q. All right. Are you familiar with the
20	Urogynecology Journal in 2011? When did you	20	term known as biofilm?
21	first receive that?	21	A. Yes.
22	A. I don't recall exactly, because I	22	Q. What do you understand a biofilm to
23	receive so many articles. I remember reading it	23	be?
24	fairly recently, within the last two weeks.	24	A. Well, biofilm would be a covering
25	Q. Did you have a chance to review	25	material that coats things in the body. As far
	Page 55		Page 57
			rage 37
1	Exhibit 3 prior to the time that you conducted	1	as its chemical composition, I've never seen it
1 2	Exhibit 3 prior to the time that you conducted your work in Exhibits 1 and 2?	1 2	as its chemical composition, I've never seen it described in these papers that I've read any

16 (Pages 58 to 61)

Page 62 Page 64 1 1 bomb on the polypropylene fiber, so it's going Q. My question is; have you ever done 2 2 to shake off anything that's loose, which it did that? 3 very beautifully, we know that's what it does, 3 A. No, not to this point. 4 4 and it did a beautiful job. Q. And is there any reason other than the 5 5 Unfortunately, the stuff that came off FTIR analysis that you've just described on 6 6 wasn't biofilm, are at least it wasn't totally Page 71 and other places in your report --7 7 A. Correct. biofilm, it wasn't even 50 percent, the majority 8 of it was polypropylene. At least in my case. 8 Q. -- that supports your opinion that 9 9 I can't speak to their -- without actually doing de Tayrac is wrong? 10 the IR of the flaked materials in theirs, I 10 MR. ANDERSON: Objection to form. 11 11 can't tell you a percentage, or even an Go ahead. 12 12 estimate. A. I think the infrared speaks for 13 13 If they had run an IR, which they itself. It's -- in my view as a chemist, a 14 14 didn't do -- I'd like to know why they didn't polymer chemist, it's pretty locked tight. You 15 run an IR to see what it was, they just state 15 can't get polypropylene infrared bands if 16 16 that it's biofilm with no proof. polypropylene isn't there. 17 Q. Have you attempted to clean a mesh 17 BY MR. THOMAS: 18 18 explant and run the same tests that you ran in Q. Is that the -- my question is simple. 19 Exhibit 1 and Exhibit 2 to determine if your 19 Is that the only information that you have, 20 findings are consistent with cleaned explanted 20 based on your analysis and work on this case, 21 21 mesh? that confirms for you that de Tayrac is wrong? 22 22 A. Cleaned how? MR. ANDERSON: Objection. 23 23 A. That de Tayrac is wrong. I think I Q. Let me ask it this way. 24 Is there a way in your training, 24 would say yes. I mean we do have other evidence 25 education, and experience to clean the mesh and 25 like DSC perhaps, but we have to -- that wasn't Page 63 Page 65 1 remove biofilms and proteins to allow for the 1 run here either, so I have no data from the 2 analysis of the explanted mesh as cleaned? 2 paper with which to judge the question. 3 A. Yes, there is. I've become aware of 3 BY MR. THOMAS: 4 this since this original work was done. It's 4 Q. You rely on the FTIR analysis in your 5 sodium hypochlorite. 5 report in Exhibit Number 1 and Exhibit Number 2 Q. And tell me how you use sodium 6 б in support of your belief that de Tayrac's 7 7 hypochlorite to clean proteins or mesh before conclusion that what is seen in the SEM is 8 8 you do the analysis? biofilm to be incorrect, is that fair? 9 A. You just soak the sample, the fiber 9 A. That's fair. 10 mesh in this case, in the typically 13 percent 10 Q. Back to oxidation. 11 chlorine solution of sodium hypochlorite. 11 Do you have an opinion about what Q. Have you done that? 12 caused the oxidation that you've identified in 12 13 13 A. We did not do that in this work. your report? Q. Have you done that at any other time? 14 14 A. I believe there was two major reasons. 15 A. No. Not at this point we haven't. 15 One was lack of antioxidant, making Q. Have you ever gone -- strike that. 16 the polypropylene vulnerable to attack by 16 Have you ever tried to replicate --17 hydrogen peroxide and other things, from 17 18 start over one more time. 18 macrophages and so on in the body. Dr. Jordi, have you ever tried to take 19 19 And the other was environmental stress 20 an explanted mesh, remove biofilm or other 20 cracking, which DSC suggests because of the 21 21 protein material, and test it to see the extent decrease in the Delta H at melt, and the 22 to which it had degraded? 22 increase in amorphous content of certain of the 23 A. I really didn't need to do that in 23 polymers, and what seems to happen is some 24 this case because the SEM photographs were so 24 samples seem to have a mix of both, and some 25 25 would be a preponderance of environmental stress

17 (Pages 62 to 65)

Page 66 Page 68 1 1 cracking and other damage, and another would be Doctor, do you have an opinion as to 2 2 caused by classical oxidation mechanism. And what substances in the human body cause the 3 3 the majority of samples in this case seemed to Ethicon polypropylene mesh to lose the 4 4 have both. But it's possible to have just one antioxidants that you've identified in your 5 5 or the other as well. report? 6 6 Q. Do you have an opinion as to whether MR. ANDERSON: Objection. Asked and 7 7 answered. the polypropylene in the Ethicon mesh -- strike 8 that. 8 Go ahead. 9 9 What is it about the human body, the A. It just bleeds, it bleeds out because 10 biochemistry of the human body, that causes the 10 of the nature of the -- we call it blooming in antioxidants to be depleted from the mesh? 11 the industry. Materials leach out of the 11 12 12 MR. ANDERSON: Objection. polymers that they're in, even in air to some 13 13 Go ahead. degree, and then they come on the surface and 14 14 get wiped away. So this would be a slow A. I don't know if that's the right 15 question. If I can explain? 15 process, which is why I believe the papers BY MR. THOMAS: 16 16 typically show no initial oxidation. It has to Q. Please. 17 17 be in the body for a while before you see the 18 18 A. If I were to put polypropylene mesh in major amounts of these effects. 19 a solvent like methylene chloride or ethanol or 19 BY MR. THOMAS: 20 propanol or methanol, or any organic solvent, 20 Q. How long? 21 21 the antioxidants would bleed out at a certain A. Some of the papers say three months. 22 22 rate. And the problem here is the mesh is fine, Q. Do you have an opinion about how long 23 23 so it's a relatively small-ish diameter so a mesh has to be in the body before the 24 there's not a lot of distance from the internal 24 antioxidants are depleted to the point where the 25 part of the fiber to the surface. So if I put 25 mesh can degrade? Page 67 Page 69 1 it in solvent, it's going to bleed out. If I 1 A. No, we would have to do a study, a 2 put it in the body which is full of lipids, 2 time study to answer that question, where we 3 cholesterol, phospholipids, cholesterol, 3 actually measured -- right now we've just 4 cholesterol esters, fatty acids, it's going to 4 measured levels of antioxidant in the samples 5 5 be bleeding out there. But it would bleed out received, the explants and the controls. We 6 б in either place. It's not really a phenomenon I would have to do a time study to answer that 7 7 see that's unique to the human body, it would question where we'd do three months, six months, 8 8 happen either place, and so it just bleeds out nine months, a year, five years, however long we 9 because of the high -- relative high surface 9 wanted to do the study, and measure the amount 10 area and small diameter. 10 of the two antioxidants present as a function of 11 Q. Do you have an opinion of what 11 time. specifically it is about the human body that 12 12 Q. Is the sole basis for your opinion 13 causes the Ethicon polypropylene mesh to leak, 13 that the Ethicon polypropylene mesh at issue in 14 14 leach its antioxidants? this litigation leaches its antioxidants the testing that's reflected in Exhibits 1 and 2? 15 A. I don't think -- as I say, I don't 15 think that is the right question. It's going to 16 A. Yes. 16 17 leach wherever it is in any solvent. 17 Q. A moment ago I asked you about the 18 It wouldn't leach in water, obviously, 18 causes, I think, of degradation, and you said 19 oxidation in combination with, in some 19 because it's not soluble, or not wetted by 20 water. But anything that will wet it, whether 20 instances, environmental stress cracking? 21 it's a fatty acid or whether it's a solvent, 21 A. Correct. 22 fatty acid in the body or a solvent, is going to 22 Q. We also talked earlier about 23 cause it to remove, I guess, the fatty -- the 23 mechanical degradation. Is there any evidence 24 antioxidants that are bleeding to the surface. 24 of mechanical degradation in your work in either 25 Exhibits 1 and 2? 25 Q. Let me ask it this way.

18 (Pages 66 to 69)

1 2	Page 70		Page 72
	A. No. That's a minor player here. If	1	BY MR. THOMAS:

19 (Pages 70 to 73)

Page 76 Page 74 1 their free form. But the Fenton reaction is 1 in Japan, 100,000 seat stadium. The seats in 2 2 one year from installation turned to dust and 3 3 blew away. So they had sent me some retains, Q. You call it the Fenton reaction? 4 4 and I had to analyze it, and the polypropylene A. Fenton reaction, yes. 5 was not stabilized. And so that's part of my 5 Q. Okay. If hydrogen peroxide was the 6 6 lifetime of experience. cause of the degradation of the polypropylene 7 7 mesh, would there be a change in the molecular Another case, the client was suing a 8 motorcycle manufacturer because -- for a 8 structure of polypropylene? 9 9 defective gas tank. But he'd hit a brick wall A. Repeat the question, please? I'm 10 at a very high rate of speed, I don't remember 10 sorry. 11 the exact, 75, 80 miles an hour, and the gas 11 Q. If the hydrogen peroxide that you 12 tank ruptured and exploded. And so they were 12 described was the cause of the degradation in 13 13 blaming the manufacturer. So I had to analyze a the polypropylene mesh, would there be a change 14 bit of that. In that case the stabilizers were 14 in the chemical structure of the polypropylene 15 present. And the point was no gas tank is going 15 mesh? 16 16 to survive hitting a brick wall at 75, 80 miles A. That's right, there would be. 17 17 an hour, so -- even though the stabilizer was Q. If there was a free radical that 18 there. So it wasn't degraded, molecular 18 degraded the polypropylene mesh, would there be 19 weight-wise, it wasn't degraded, the 19 a change in the chemical construction of the 20 antioxidants were there. 20 polypropylene mesh? 21 21 And in the other case, it turned to A. Yes. You would be inserting oxygen 22 22 dust and blew away, and the antioxidants were into the chain in the form of either ketone. 23 2.3 aldehyde, hydroxide. not present. 24 So when I see a lack of antioxidant in 24 Q. And the free ferrous ion which you 25 essentially basically all these samples, by both 25 referred to as the Fenton? Page 75 Page 77 1 PYMS and LCMS, it tells me the polymer is 1 A. It's not just a free -- if you would 2 exceedingly susceptible to oxidation by hydrogen 2 like I'll give you the reaction. Do you want 3 peroxide, which it would be partially protected 3 that? 4 from if antioxidants were still there, but 4 Q. Yes. 5 5 they're not there. A. Fe2+ plus hydrogen peroxide goes to, 6 б Q. Okay. Is it your opinion that an arrow, Fe3+ +HO- -- that's hydroxide, that's 7 7 hydrogen peroxide is the material that attacked harmless, but here's the problem -- +HO., which 8 8 the mesh that caused it to degrade as is is the radical, hydroxy radical, that is many 9 reflected in Exhibits 1 and 2? 9 more times damaging to polypropylene than the 10 A. Well, in the body there are things 10 initial hydrogen peroxide. Q. Okay. 11 like ferrous ion, for example, and if -- I can't 11 12 A. Now, I can't sort out which one is --12 answer the question with a simple answer 13 because, again, there's multiple causes. 13 Q. That's fine. You're consulting a 14 If there's any free ferrous ion around 14 paper there. What's the paper you're 15 you'll get what's called a Fenton reaction, 15 consulting? which converts hydrogen peroxide to hydroxyl 16 A. "Mechanisms of polymer degradation in 16 17 implantable devices" by Williams. radicals, which are more damaging than the 17 18 hydrogen peroxide to begin with in causing 18 Q. That's David Williams? 19 degradation of the polypropylene. It's a free 19 A. David Williams. 20 radical initiator step. 20 Q. That's the one cited in your --21 A. Yes, sir. 21 So if there is, you know, bleeding 22 perhaps, that can be a source of iron, and if 22 Q. Okay. The last reaction you described 23 there's some ferrous ion around -- of course it 23 is called the Fenton reaction, is that right? 24 has to be free ferrous ion, the body needs 24 A. Right. 25 25 protein to bind iron, because it's dangerous in Q. Does the Fenton reaction causing

20 (Pages 74 to 77)

1 2	Page 78		Page 80
	degradation of polypropylene alter the chemical	1	A. Those are described in actual tests in
	structure of the polypropylene?	2	the Dr. Müller book, timed experiments.
3	A. Does the hydroxide or the Fenton	3	Q. Do you know?
4	reaction cause, is that what you're asking.	4	A. Well, it depends on the temperature.
5	Q. Yes.	5	And it varies with the environment, the oxygen
6	A. Sure it does, because that's the	6	environment and the temperature actually used.
7	production of the hydroxy radicals which causes	7	Some are run at 200 degrees, some are run at
8	the actual change.	8	100 degrees.
9	Q. Any other potential sources of	9	Q. Do you know the temperature at which
10	oxidation to the polypropylene mesh given the	10	the polypropylene that's used in the Ethicon
11	leaching of antioxidants that you've described?	11	mesh will degrade?
12	MR. ANDERSON: Objection as to form.	12	A. I know in general terms that the
13	Go ahead.	13	higher the temperature, the faster it will
14	A. You could also have what's called a	14	degrade. That's what I know. Which is
15	more general version of the Fenton reaction,	15	uniformly true.
16	would be the Haber-Weiss, H-A-B-E-R - W-E-I-S-S,	16	Q. Do you have an opinion as you sit here
17	reaction.	17	today of the temperature at which the Ethicon
18	BY MR. THOMAS:	18	mesh used in the TVT device will degrade?
19	Q. Are you consulting the Williams	19	A. Without testing, no. And it would
20	article again?	20	depend on whether the antioxidants are there or
21	A. Yes. That would be include cuprous	21	not, that will affect the temperature.
22	ion as well as ferrous ion, could include	22	Q. Is it possible to measure the amount
23	titanium is another one, titanium 3 or vanadium	23	of hydrogen peroxide that is in a person around
24	4 is another possibility. Those are not	24	the mesh implant?
25	commonly found, we're not going to worry about	25	A. We have techniques that will allow us
	Page 79		Page 81
1	those in the body.	1	to measure hydrogen peroxide. We have hydrogen
2	Q. Titanium and vanadium aren't going to	2	peroxide test strips, for example, but you can't
3	be found in the body, are they?	3	stick those into an implant very well. So I
4	A. No. It's cuprous and ferrous.	4	don't know, I've never seen it talked about or

A. Well, no, I don't think so, not as received.  Q. You don't know, or you don't think you

21 (Pages 78 to 81)

Page 82 Page 84 cannot? 1 1 of metals that would be the catalyst for the 2 2 A. Cannot. Haber-Weiss reaction or the Fenton reaction. 3 Q. Thank you. 3 Q. If you had that information, how would 4 4 A. Because it's not there, it's been you use that to determine the extent to which 5 treated with formaldehyde when we get it, so 5 those chemicals caused or contributed to the 6 6 it's not the way it was in the body -degradation of the mesh? 7 7 Q. Okay. A. Well, the greater the concentration of 8 A. -- at the time of excision. 8 the iron and copper, copper 2 and iron -- copper 9 9 Q. So is it fair to understand that it's 1 and iron 2, the greater the damage would be. 10 your opinion that you're not able to test these 10 Q. Okay. 11 A. It should correlate. But it's mesh explants for materials that may have been 11 12 in the body that you believe caused or 12 complicated, because if those metals were tied 13 13 contributed to the degradation of the mesh? up by the typical proteins in the body that are MR. ANDERSON: Objection to form. 14 14 supposed to tie up copper and iron so they are 15 Materials in the body, or chemicals in 15 not -- they don't kill us, you have to figure 16 16 out a way to -- and as I sit here, this is just the body? 17 17 research, I'm unable to answer the question MR. THOMAS: Thank you, Ben. MR. ANDERSON: Just to be clear. 18 completely, I would have to be sure that the 18 19 BY MR. THOMAS: 19 iron we determined was free ferrous ion in the 20 Q. Doctor, is it fair to understand it's 20 body and free cuprous, or it wouldn't be 21 21 your opinion that because of the placement of damaging even if present. 22 22 the explants in formaldehyde, that one is unable Sorry, that's my answer. 23 23 to test for chemicals in the body that may have Q. Okay. Let me see if I can finish 24 caused or contributed to the degradation of the 24 this. 25 mesh? 25 Is it fair to understand, Doctor, as Page 83 Page 85 1 1 A. That question would require a lot of you sit here today you don't know of a test that 2 research. But it's possible, for example, that 2 would enable you to determine which chemicals in 3 we could -- certainly we could look for iron in 3 the body caused or contributed to any 4 the tissue, or we could look for copper in the 4 degradation of the mesh explant samples? 5 tissue, which would be consistent with the 5 A. No. We just know that macrophages б Haber-Weiss reaction, which would have produced б have been shown to -- in superoxide and hydrogen 7 the hydrogen peroxide in the first place. So we 7 peroxide. 8 8 could see telltale signs. In that sense, we Q. Okay. You said "no" to my question. 9 might be able to see something. 9 A. I'm sorry. Correct. 10 10 Q. Doctor, as you sit here today, is Q. Is it true, is it fair to say that, as 11 there a test that you know of that could be 11 you sit here today, that you don't know of any performed on these explanted meshes to determine 12 tests that would allow you to determine which 12 13 which chemical substance in the body caused or 13 chemicals in the body may have caused or 14 14 contributed to any degradation of this mesh? contributed to any degradation of the mesh 15 A. If it's hydrogen peroxide produced in 15 explant samples? the macrophages, we can't test for it because 16 A. Again, from my reading the literature 16 17 and seeing the production of hydrogen peroxide 17 it's not there. 18 Q. Okay. Anything else? 18 and superoxide, that has to be one of the A. If it's caused by the Fenton reaction 19 mechanisms, and the other ones could be. I 19 20 or the Haber-Weiss, yes, we could take that 20 don't know how to answer the question. tissue, and we could dissolve it, and then run 21 21 Q. But the question is; it's fair to 22 ion chromatography and determine parts per 22 understand, as you sit here today, that you do 23 billion levels of iron and the copper. 23 not know of any test that you could perform to 24 Q. What would that tell you? 24 determine which chemicals in the body may have 25 25 A. It would tell us the potential levels caused or contributed to any degradation of the

22 (Pages 82 to 85)

Page 86 Page 88 polypropylene mesh in these explants? You don't 1 1 amount of crystallinity goes down. Delta H of 2 2 know of one? melt goes down, the percent crystallinity goes 3 3 down, the percent amorphous goes up, which then A. Seeing the oxidation, I couldn't tell 4 4 you whether it was caused by the Fenton that material, the amorphous material, is what 5 reaction, the Haber-Weiss reaction, or hydrogen 5 is susceptible to environmental stress cracking. 6 6 peroxide, that's true, if that's what you want. BY MR. THOMAS: 7 7 Q. Thank you. Q. Doctor, do you have an opinion in this 8 Or any other substance, there's not a 8 case as to whether the mesh explants that you 9 9 test that you can do to tell us what caused it? analyzed show environmental stress cracking? 10 A. No. All I can say is I'm looking at 10 A. I think as one of the components I 11 11 the fact of the degradation. It had to happen, have an opinion, because we saw a drop in the 12 so I'd be looking for -- as to what specifically 12 Delta H at melt, of the explants. 13 caused it, I have to agree. 13 Q. Is it your opinion that the drop in 14 the Delta H in the DSC testing is proof of 14 Q. Thank you. 15 A. I can't answer. 15 environmental stress cracking? MR. THOMAS: We can take a quick break 16 16 A. It's just like the lack of 17 17 antioxidants. It's consistent with, it's not by if you don't mind. (Whereupon, a recess was taken from 18 itself proof of. But it's proof of the 18 19 11:06 a.m. to 11:15 a.m.) 19 susceptibility of the polymer to environmental 20 BY MR. THOMAS: 20 stress cracking. 21 21 Q. Doctor, what is environmental stress Then I have to go back still, 22 22 ultimately back to the SEMs, because the fact is cracking? 23 23 A. Environmental stress cracking is the not in question. It's occurring, we can see it. 24 degradation of a polymer from imbibing, or the 24 The question is why, and that way we have to --25 absorption of materials, in this case like 25 now we have to look at a series of data to make Page 87 Page 89 1 cholesterol, cholesterol esters, fatty acids, 1 our best judgment. I think in many cases the 2 into the interstitial space between the polymer 2 damage is caused by both. 3 chains which causes it to swell, creating 3 Q. So just so I'm clear, your opinion 4 stress, which eventually ruptures some of the 4 that the mesh that you've analyzed in the 5 5 polymer chains, causing degradation. explants has undergone environmental stress 6 6 Q. Is it your opinion in this case that cracking is due to your visual observation on 7 7 the mesh explants that you analyzed exhibit the SEM images and the DSC data, correct? 8 8 environmental stress cracking? A. Right. 9 A. Sorry. Repeat the question, please? 9 Q. Is there any other information that 10 Q. Is it your opinion in this case that 10 you determined from your report, or your work in 11 the mesh explants that you analyzed show 11 this case, that you rely upon for your opinion 12 that the explanted mesh underwent environmental 12 environmental stress cracking? 13 MR. ANDERSON: Objection. Asked and 13 stress cracking? 14 answered. 14 A. Any other data from my report, that 15 15 was the question? Go ahead. 16 A. When I look at SEM photographs and see 16 Q. Yes. 17 A. No. the cracking, I can't tell just from looking at 17 18 the cracking whether it was oxidative damage or 18 Q. All right. Do you agree that pelvic environmental stress cracking that caused that 19 organ prolapse is well-known for its high 19 20 damage, or a combination of both. 20 resistance to environmental stress cracking? 21 21 DSC is one of the best techniques to A. Yes. But the fact of the matter is 22 suggest that, because we can measure the melt 22 the Delta H is going down, so something is 23 point, and we can measure the Delta H at melt 23 causing that amorphous region to increase. 24 which correlates to the amount of crystallinity. 24 Q. And the Delta H you're talking about 25 25 So as the Delta H of melting goes down, the is the melting point as measured by the DSC

23 (Pages 86 to 89)

1 measurements, correct? 2 A. The melting point goes down, and the 3 Delta H at melt goes down. And again, there's 4 variability from sample to sample. So some 1 fatty acids and the like, then the process we 2 be more rapid than they would if there were 3 as much cholesterol, cholesterol esters in a 4 given patient. That depends on the patient's	ould

24 25	it's flaking, I'm looking at the oxidation, it's oxidized. I don't know how else to answer the	24 25	A. It makes it more rigid. It makes it more brittle eventually. It causes it to flake.

25 (Pages 94 to 97)

	Page 98		Page 100
1	BY MR. THOMAS:	1	to the extrusion lines, or the grain of the
2	Q. How much oxidation is required for the	2	mesh?
3	mesh to be more rigid?	3	A. Correct.
4	A. I can't answer that question sitting	4	Q. Have you analyzed the extent to which
5	here, but it's not very much from reading the	5	perpendicular cracking is consistent with the
6	literature. 1 percent increased oxygen would	6	chemical structure of the mesh?
7	probably do it.	7	A. Repeat the question, please?
8	Q. How much oxidation is required to make	8	Q. Have you analyzed the extent to which
9	the polypropylene more brittle?	9	perpendicular cracking is consistent with the
10	A. It's a process. It's not a single	10	chemical structure of the mesh?
11	point. So I felt this material in my fingers, I	11	MR. ANDERSON: Objection as to form.
12	could feel the rigidity in it compared to the	12	Go ahead.
13	straight.	13	A. When you put a material through the
14	Q. Very simple question. How much	14	dye, you'll be aligning the polymer chains along
15	oxidation is required, Doctor?	15	the line of the fiber so that only you
16	A. I don't know.	16	basically only have London-London forces of the
17	Q. How many oxidation is required to	17	CH2 groups and CH3 groups in the polymer
18	cause the polypropylene to flake?	18	backbone holding the polymer together, so it
19	A. Anywhere from none to a lot, because	19	will be more easily cracked if you bend it
20	it depends if it was environmental stress	20	it's going to tend to crack vertically to the
21	cracking you wouldn't necessarily to have	21	direction of the fiber.
22	oxidation for environmental stress cracking, or	22	BY MR. THOMAS:
23	it could be totally related to oxidation, or it	23	Q. Okay. Is that something you studied
24	could be a mix.	24	before I asked you the question, or you just
25	Q. Dr. Jordi, you report in Exhibit 1 and	25	answered that question based upon your
	Page 99		Page 101
1	2 the observation of cracking perpendicular to	1	knowledge?
2	the extrusion lines in the mesh?	2	A. Based on my knowledge.
3	A. Yes.	3	Q. Okay. Did you study, as a part of
4	Q. And what are extrusion lines?	4	your analysis of this case, the extent to which
5	A. Well, you just can see them in the	5	cracking would be expected along the grain or
6	I think they're little probably caused by	6	extrusion lines of the mesh as compared to the
7	miniature, if you want to call it, defects in	7	perpendicular angle that's called out in your
8	the dye.	8	report?
9	Page 25 is a typical example. You can	9	MR. ANDERSON: Objection as to form.
10	see the lines moving along the line of	10	A. Again, I have to have it repeated.
11	extrusion.	11	Sorry.
12	Q. Extrusion is a process by which the	12	BY MR. THOMAS:
13	fibers are formed?	13	Q. Did you study, as a part of your
14	A. I believe so, yes.	14	analysis of this case, the extent to which
15	Q. Are you familiar with the extrusion	15	cracking would be expected along the grain or
16	process?	16	extrusion lines of the mesh as compared to the
17	A. Not a lot.	17	perpendicular angle that's called out in your
18	Q. Okay.	18	report?
19	A. I'm more an analyst.	19	A. Well, what's called out in my report
20	Q. Are you comfortable with calling the	20	was what we observed.
21	extrusion lines the grain of the fiber?	21	Did I study differences? It's not a
22	A. Sure.	22	perfect thing. You can see cracks in other
23	Q. Okay. And when we talk about the	23	directions, too, sometimes, it's just a majority
24	perpendicular cracks, we're talking about the	24	seems to be in the vertical.
25	cracking that you observed being perpendicular	25	Q. Okay.

26 (Pages 98 to 101)

Page 102 Page 104 1 1 A. And furthermore, you can see these -come apart in the amorphous region. They don't 2 2 the grain, as you call it, is running right have as much force holding them together. You 3 3 through these cracks, so that's further have to literally rupture chemical bonds. 4 4 information to suggest that these -- this I don't see what you're saying, I'm 5 5 cracked region is not biofilm, it's sorry. 6 6 polypropylene, because it's got the same grain Q. So is it your testimony that to have 7 7 in it the original polypropylene did in the the oxidation or environmental stress cracking 8 cracked pieces. If it was biofilm, those marks 8 necessary to cause the cracking on Page 40 in 9 9 should go away. They don't, they're there. Figure 44 of your report, Exhibit 1, requires a 10 Q. Have you analyzed the issue of 10 rupture of the chemical bond? 11 11 environmental stress cracking to determine A. I would think that would be true on 12 whether environmental stress cracks would run 12 the surface, yes. 13 13 with the extrusion lines or the grain as opposed Q. Okay. 14 14 A. Has to be. to the perpendicular manner in which you call 15 out in your report? 15 Q. And every place that you see this 16 16 A. Have I analyzed that? No. cracking in the scanning electron microscopy, 17 Q. The crazing that you've talked about 17 the images that you've talked about, in order to 18 18 are the areas in the mesh that are furthest away get the cracking that you describe shown in the 19 from the crystals in the mesh, is that fair, in 19 SEM images requires a breaking of the chemical 20 the amorphous regions? 20 bond; fair? 21 21 A. In the amorphous regions, yes. A. I think so. 22 22 Q. And the crazing that you've talked Q. Let's go to your report, Exhibit 23 about is the small cracks that form in this 23 Number 1. Let's go to the PYMS data. 24 amorphous region, correct? 24 MR. ANDERSON: Page 80 you're showing? 25 A. Yes. 25 MR. THOMAS: Page 80. Page 103 Page 105 1 Q. Knowing what you do about 1 A. Okay. 2 polypropylene, and the chemical structure of it, 2 BY MR. THOMAS: 3 and the crazing that you've just described, 3 Q. Tell me what the PYMS technique is. 4 wouldn't it be more likely that any 4 A. Stands for pyrolysis mass 5 environmental stress cracking would occur with 5 spectroscopy. The sample is heated, and until 6 б the grain or along the extrusion lines of that it fractures the bonds in the polymer releasing 7 7 mesh as opposed to perpendicular to the mesh? everything, small molecules and so on, and then 8 8 A. The -- if you -- well, first of all, those fragments are put through a GC column, 9 the fact of the matter is it's vertical to it. 9 then they're monitored by a mass spectrometer. 10 I mean that's just a fact for the vast majority 10 We tend to do a two step method as 11 of them. 11 well where we heat the sample to 300C, which 12 12 Q. I'm asking you based upon your tends not to fragment the polymer, and that 13 knowledge as a biochemist, your knowledge of 13 releases additives so we can see additives 14 polypropylene, and your knowledge of the 14 without being overwhelmed by polymer fragments. 15 chemical structure, and the way that you've 15 One of the disadvantages of a PYMS by described the environmental stress cracking as 16 itself is that when you burn the polymer, in 16 17 we've been through it, isn't it more logical to this case polypropylene, you get a massive 17 18 conclude that environmental stress cracking 18 amount of polypropylene fragment ions which 19 19 would occur along the grain or the extrusion tends to overwhelm the ability of a detector to 20 lines as opposed to perpendicular to those 20 sense sometimes certain ions, like the 21 21 antioxidants, like Santonox, at least at the lines? 22 A. If you wanted -- if you picture long 22 levels that we want to detect it at. 23 chains going this way of polymer, and then you 23 Q. As I understand your report and your 24 bent it this way, then it's going to tend to 24 earlier discussion, you used the PYMS analytical 25 25 crack here because those chains are going to technique to determine the extent to which

27 (Pages 102 to 105)

	Page 106		Page 108
1	additives in the Ethicon polypropylene mesh are	1	Q. Why not?
2	present?	2	A. We didn't think it would have any
3	A. That's right. I mean that's one of	3	effect on the results.
4	two. We use the LCMS as well.	4	Q. Why?
5	Q. Start with this one. Tell me how you	5	A. It's not an extracting solvent. It's
6	do that.	6	going to dissolve polypropylene, so it's not
7	A. How you determine	7	going to have any rapid effect on an extraction.
8	Q. Right.	8	Q. Why do you say that?
9	A. You well, you would first, if	9	A. Well, the polypropylene is solid. It
10	you're looking for Santonox R, you would shoot a	10	doesn't leach out additives quickly unless you
11	standard of Santonox R, and then you would look	11	put it in proper solvent extraction methods. Or
12	for the ions that you get. Santonox R gives	12	this case it was simply there, we didn't do an
13	ions at 358 and 343 atomic mass units, so you	13	extraction method, that's the LCMS, we just
14	would plot those ions and look at them as shown	14	simply put it in the sample holder and shoot it.
15	on figure well, the ions aren't shown in	15	Q. Have you analyzed the extent to which
16	Figure 82, but the chromatogram is.	16	formaldehyde is an oxidant?
17	Q. Let's back up a minute.	17	A. No.
18	When you're doing this test, do you	18	Q. And to the extent formaldehyde is an
19	test both the explants and the controls?	19	oxidant, you'd expect formalin to be an oxidant,
20	A. Absolutely.	20	wouldn't you?
21	Q. And why do you do that?	21	A. Right.
22	A. Because you want to look for	22	Q. To the extent that formalin is an
23	differences again. First of all, we want to be	23	oxidant, it would be appropriate to test the
24	sure that the pristine has it in it, and it did.	24	polypropylene pristine samples in formalin as a
25	And then we want to see whether or not the	25	part of your PYMS analysis, wouldn't it?
	Page 107		Page 109
1	explants have it in it.	1	A. It certainly could be done, but we
2	Q. Okay. Did you test the formalin	2	didn't do it.
3	controls as a part of the PYMS test?	3	Q. Because if you found that the
4	(Witness reviewing document.)	4	antioxidants were substantially reduced in the
5	A. It's not shown here. I'm going to	5	formalin control sample, that would impact your
6	have to go in the original data. A lot of the	6	opinions, wouldn't it?
7	stuff that was in the original data is not in	7	A. Yes.
8	this part.	8	Q. Why?
9	MR. ANDERSON: Go to the original	9	A. Well, then we would imply that the
10	data.	10	formalin extracted the polypropylene additives
11	MR. THOMAS: Is that all data that's	11	out.
12	been produced to us already?	12	Q. Have you analyzed at all in connection
13	A. It's all here, except you've got it on	13	with your work in this case the extent to which
14	dual sided. It's all here. So I have twice as	14	formalin will extract the antioxidants from the
15	much paper.	15	polypropylene mesh used in the TVT device?
16	BY MR. THOMAS:	16	A. We didn't do any work with formalin,
17	Q. While you look for that, I'm going to	17	so no.
18	go to the restroom.	18	Q. So what your findings in the PYMS
19	(Pause.)	19	section of the report show is only the pristine
20	A. Repeat the question. I'm sorry. I	20	mesh compared to the explanted mesh treated in
21	think I've got pretty close.	21	formalin?
22	BY MR. THOMAS:	22	A. That's correct.
23	Q. Did you test the formalin control as a	23	Q. Now, the next step you take in the
24	part of the PYMS test?	24	antioxidant analysis is your LCMS work, correct?
25	A. I didn't see it, no.	25	A. Correct.

28 (Pages 106 to 109)

	Page 110		Page 112
1	Q. That's on Page 84 of your report.	1	A. A lot of that's overlay of peaks of
2	A. Got it.	2	Santonox R for where Santonox R loops at 11.6
3	Q. And in this work, you did testing on	3	minutes about.
4	the control samples, didn't you?	4	And extracted ion simply means we know
5	A. Yes.	5	we have the 357 ion that shows up, so we tune
6	Q. And you did test work on the formalin	6	the instrument to see, or to record only the 357
7	control samples, didn't you?	7	ion, which is specific to Santonox R, ignoring
8	A. Yes.	8	all the other impurities, anything else that
9	Q. Turn to Page 96, please, of your	9	might also be co-eluting. So it makes the
10	report. Table 19.	10	method specific.
11	A. 19 starts on Page 95, just so you	11	Q. So how does the LCMS work?
12	know.	12	A. The liquid is put in from a column
13	Q. Thank you. Take your time and look at	13	into the detector and made into a mist, and a
14	both of them if you want to, both pages.	14	voltage is applied, and you get ions. The ions
15	A. Okay.	15	are put through quadripoles, which bends them.
16	Q. Let's just talk about it.	16	Then it goes through a big tube called a time of
17	Page 95 begins at Table 19, and it's	17	flight. When it starts going up the tube, a
18	called "Santonox R Relative Quantification," and	18	clock starts, hits the top, starts coming down,
19	on the left you show sample, on the right you	19	and when it reaches the detector at the bottom,
20	show peak area.	20	it hits the other clock, measures literally the
21	What are you trying to show in this	21	time between the start and the impact on the
22	table?	22	detector. And then that time is related to the
23	A. The relative amounts of Santonox R in	23	mass. It gives you a very accurate mass, which
24	the various fibers.	24	is the point of CUTO, giving you very accurate
25	Q. And Santonox R is one of the	25	mass.
	Page 111		D 112

1 2	antioxidants in the mesh?	1 2	Q. What does peak area mean that's
2	antioxidants in the mesh? A. That's correct.	2	Q. What does peak area mean that's reported in Table 19?
2 3	antioxidants in the mesh? A. That's correct. Q. And the Santonox R is put in the mesh	2 3	<ul><li>Q. What does peak area mean that's reported in Table 19?</li><li>A. Just integrate the area under the</li></ul>
2 3 4	antioxidants in the mesh? A. That's correct. Q. And the Santonox R is put in the mesh to protect against the oxidation that you're	2 3 4	Q. What does peak area mean that's reported in Table 19? A. Just integrate the area under the curve that's observed.
2 3 4 5	antioxidants in the mesh? A. That's correct. Q. And the Santonox R is put in the mesh to protect against the oxidation that you're critical of in this mesh?	2 3 4 5	Q. What does peak area mean that's reported in Table 19? A. Just integrate the area under the curve that's observed. Q. Then you compare the peak area that
2 3 4 5 6	antioxidants in the mesh?  A. That's correct.  Q. And the Santonox R is put in the mesh to protect against the oxidation that you're critical of in this mesh?  A. Yes.	2 3 4 5 6	Q. What does peak area mean that's reported in Table 19? A. Just integrate the area under the curve that's observed. Q. Then you compare the peak area that you found for the explant samples against the
2 3 4 5 6 7	antioxidants in the mesh?  A. That's correct.  Q. And the Santonox R is put in the mesh to protect against the oxidation that you're critical of in this mesh?  A. Yes.  Q. And it's your opinion that the	2 3 4 5 6 7	Q. What does peak area mean that's reported in Table 19? A. Just integrate the area under the curve that's observed. Q. Then you compare the peak area that you found for the explant samples against the control samples to determine the extent to which
2 3 4 5 6 7 8	antioxidants in the mesh?  A. That's correct.  Q. And the Santonox R is put in the mesh to protect against the oxidation that you're critical of in this mesh?  A. Yes.  Q. And it's your opinion that the Santonox R leaches out of the mesh, making it	2 3 4 5 6 7 8	Q. What does peak area mean that's reported in Table 19?  A. Just integrate the area under the curve that's observed.  Q. Then you compare the peak area that you found for the explant samples against the control samples to determine the extent to which the Santonox R has been reduced, is that
2 3 4 5 6 7 8 9	antioxidants in the mesh?  A. That's correct.  Q. And the Santonox R is put in the mesh to protect against the oxidation that you're critical of in this mesh?  A. Yes.  Q. And it's your opinion that the Santonox R leaches out of the mesh, making it more vulnerable to oxidation and environmental	2 3 4 5 6 7 8 9	Q. What does peak area mean that's reported in Table 19?  A. Just integrate the area under the curve that's observed.  Q. Then you compare the peak area that you found for the explant samples against the control samples to determine the extent to which the Santonox R has been reduced, is that correct?
2 3 4 5 6 7 8 9	antioxidants in the mesh?  A. That's correct.  Q. And the Santonox R is put in the mesh to protect against the oxidation that you're critical of in this mesh?  A. Yes.  Q. And it's your opinion that the Santonox R leaches out of the mesh, making it more vulnerable to oxidation and environmental stress cracking, correct?	2 3 4 5 6 7 8 9	Q. What does peak area mean that's reported in Table 19?  A. Just integrate the area under the curve that's observed.  Q. Then you compare the peak area that you found for the explant samples against the control samples to determine the extent to which the Santonox R has been reduced, is that correct?  A. That's correct.
2 3 4 5 6 7 8 9 10	antioxidants in the mesh?  A. That's correct.  Q. And the Santonox R is put in the mesh to protect against the oxidation that you're critical of in this mesh?  A. Yes.  Q. And it's your opinion that the Santonox R leaches out of the mesh, making it more vulnerable to oxidation and environmental stress cracking, correct?  A. Making it, yeah, more susceptible to	2 3 4 5 6 7 8 9 10	Q. What does peak area mean that's reported in Table 19?  A. Just integrate the area under the curve that's observed.  Q. Then you compare the peak area that you found for the explant samples against the control samples to determine the extent to which the Santonox R has been reduced, is that correct?  A. That's correct.  Q. So, for example, in 13674, the peak
2 3 4 5 6 7 8 9 10 11 12	antioxidants in the mesh?  A. That's correct.  Q. And the Santonox R is put in the mesh to protect against the oxidation that you're critical of in this mesh?  A. Yes.  Q. And it's your opinion that the Santonox R leaches out of the mesh, making it more vulnerable to oxidation and environmental stress cracking, correct?  A. Making it, yeah, more susceptible to oxidation.	2 3 4 5 6 7 8 9 10 11 12	Q. What does peak area mean that's reported in Table 19?  A. Just integrate the area under the curve that's observed.  Q. Then you compare the peak area that you found for the explant samples against the control samples to determine the extent to which the Santonox R has been reduced, is that correct?  A. That's correct.  Q. So, for example, in 13674, the peak area is 315,246?
2 3 4 5 6 7 8 9 10 11 12 13	antioxidants in the mesh?  A. That's correct.  Q. And the Santonox R is put in the mesh to protect against the oxidation that you're critical of in this mesh?  A. Yes.  Q. And it's your opinion that the Santonox R leaches out of the mesh, making it more vulnerable to oxidation and environmental stress cracking, correct?  A. Making it, yeah, more susceptible to oxidation.  Q. All right. So on the left you have	2 3 4 5 6 7 8 9 10 11 12 13	Q. What does peak area mean that's reported in Table 19?  A. Just integrate the area under the curve that's observed.  Q. Then you compare the peak area that you found for the explant samples against the control samples to determine the extent to which the Santonox R has been reduced, is that correct?  A. That's correct.  Q. So, for example, in 13674, the peak area is 315,246?  A. Correct.
2 3 4 5 6 7 8 9 10 11 12 13	antioxidants in the mesh?  A. That's correct.  Q. And the Santonox R is put in the mesh to protect against the oxidation that you're critical of in this mesh?  A. Yes.  Q. And it's your opinion that the Santonox R leaches out of the mesh, making it more vulnerable to oxidation and environmental stress cracking, correct?  A. Making it, yeah, more susceptible to oxidation.  Q. All right. So on the left you have the numbers of your samples, correct?	2 3 4 5 6 7 8 9 10 11 12 13 14	Q. What does peak area mean that's reported in Table 19?  A. Just integrate the area under the curve that's observed.  Q. Then you compare the peak area that you found for the explant samples against the control samples to determine the extent to which the Santonox R has been reduced, is that correct?  A. That's correct.  Q. So, for example, in 13674, the peak area is 315,246?  A. Correct.  Q. And you compare that to your control
2 3 4 5 6 7 8 9 10 11 12 13 14 15	antioxidants in the mesh?  A. That's correct.  Q. And the Santonox R is put in the mesh to protect against the oxidation that you're critical of in this mesh?  A. Yes.  Q. And it's your opinion that the Santonox R leaches out of the mesh, making it more vulnerable to oxidation and environmental stress cracking, correct?  A. Making it, yeah, more susceptible to oxidation.  Q. All right. So on the left you have the numbers of your samples, correct?  A. Yes.	2 3 4 5 6 7 8 9 10 11 12 13 14 15	Q. What does peak area mean that's reported in Table 19?  A. Just integrate the area under the curve that's observed.  Q. Then you compare the peak area that you found for the explant samples against the control samples to determine the extent to which the Santonox R has been reduced, is that correct?  A. That's correct.  Q. So, for example, in 13674, the peak area is 315,246?  A. Correct.  Q. And you compare that to your control sample, 3398135, of 2,324,899, that's your
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	antioxidants in the mesh?  A. That's correct.  Q. And the Santonox R is put in the mesh to protect against the oxidation that you're critical of in this mesh?  A. Yes.  Q. And it's your opinion that the Santonox R leaches out of the mesh, making it more vulnerable to oxidation and environmental stress cracking, correct?  A. Making it, yeah, more susceptible to oxidation.  Q. All right. So on the left you have the numbers of your samples, correct?  A. Yes.  Q. And on the right you have the peak	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	Q. What does peak area mean that's reported in Table 19?  A. Just integrate the area under the curve that's observed.  Q. Then you compare the peak area that you found for the explant samples against the control samples to determine the extent to which the Santonox R has been reduced, is that correct?  A. That's correct.  Q. So, for example, in 13674, the peak area is 315,246?  A. Correct.  Q. And you compare that to your control sample, 3398135, of 2,324,899, that's your pristine control sample?
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	antioxidants in the mesh?  A. That's correct.  Q. And the Santonox R is put in the mesh to protect against the oxidation that you're critical of in this mesh?  A. Yes.  Q. And it's your opinion that the Santonox R leaches out of the mesh, making it more vulnerable to oxidation and environmental stress cracking, correct?  A. Making it, yeah, more susceptible to oxidation.  Q. All right. So on the left you have the numbers of your samples, correct?  A. Yes.  Q. And on the right you have the peak area of Santonox R. What does the peak area	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	Q. What does peak area mean that's reported in Table 19?  A. Just integrate the area under the curve that's observed.  Q. Then you compare the peak area that you found for the explant samples against the control samples to determine the extent to which the Santonox R has been reduced, is that correct?  A. That's correct.  Q. So, for example, in 13674, the peak area is 315,246?  A. Correct.  Q. And you compare that to your control sample, 3398135, of 2,324,899, that's your pristine control sample?  A. That's pristine control. There's some
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	antioxidants in the mesh?  A. That's correct.  Q. And the Santonox R is put in the mesh to protect against the oxidation that you're critical of in this mesh?  A. Yes.  Q. And it's your opinion that the Santonox R leaches out of the mesh, making it more vulnerable to oxidation and environmental stress cracking, correct?  A. Making it, yeah, more susceptible to oxidation.  Q. All right. So on the left you have the numbers of your samples, correct?  A. Yes.  Q. And on the right you have the peak area of Santonox R. What does the peak area mean?	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	Q. What does peak area mean that's reported in Table 19?  A. Just integrate the area under the curve that's observed.  Q. Then you compare the peak area that you found for the explant samples against the control samples to determine the extent to which the Santonox R has been reduced, is that correct?  A. That's correct.  Q. So, for example, in 13674, the peak area is 315,246?  A. Correct.  Q. And you compare that to your control sample, 3398135, of 2,324,899, that's your pristine control sample?  A. That's pristine control. There's some variability there.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	antioxidants in the mesh?  A. That's correct.  Q. And the Santonox R is put in the mesh to protect against the oxidation that you're critical of in this mesh?  A. Yes.  Q. And it's your opinion that the Santonox R leaches out of the mesh, making it more vulnerable to oxidation and environmental stress cracking, correct?  A. Making it, yeah, more susceptible to oxidation.  Q. All right. So on the left you have the numbers of your samples, correct?  A. Yes.  Q. And on the right you have the peak area of Santonox R. What does the peak area mean?  A. It's just we're plotting you can	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	Q. What does peak area mean that's reported in Table 19?  A. Then you compare the peak area that you found for the explant samples against the control samples to determine the extent to which the Santonox R has been reduced, is that correct?  A. That's correct.  Q. So, for example, in 13674, the peak area is 315,246?  A. Correct.  Q. And you compare that to your control sample, 3398135, of 2,324,899, that's your pristine control sample?  A. That's pristine control. There's some variability there.  Q. And you'd conclude from that that the
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	antioxidants in the mesh?  A. That's correct.  Q. And the Santonox R is put in the mesh to protect against the oxidation that you're critical of in this mesh?  A. Yes.  Q. And it's your opinion that the Santonox R leaches out of the mesh, making it more vulnerable to oxidation and environmental stress cracking, correct?  A. Making it, yeah, more susceptible to oxidation.  Q. All right. So on the left you have the numbers of your samples, correct?  A. Yes.  Q. And on the right you have the peak area of Santonox R. What does the peak area mean?  A. It's just we're plotting you can see the photograph here of the peaks for	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	Q. What does peak area mean that's reported in Table 19?  A. Just integrate the area under the curve that's observed.  Q. Then you compare the peak area that you found for the explant samples against the control samples to determine the extent to which the Santonox R has been reduced, is that correct?  A. That's correct.  Q. So, for example, in 13674, the peak area is 315,246?  A. Correct.  Q. And you compare that to your control sample, 3398135, of 2,324,899, that's your pristine control sample?  A. That's pristine control. There's some variability there.  Q. And you'd conclude from that that the explant sample has a substantially diminished
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	antioxidants in the mesh?  A. That's correct.  Q. And the Santonox R is put in the mesh to protect against the oxidation that you're critical of in this mesh?  A. Yes.  Q. And it's your opinion that the Santonox R leaches out of the mesh, making it more vulnerable to oxidation and environmental stress cracking, correct?  A. Making it, yeah, more susceptible to oxidation.  Q. All right. So on the left you have the numbers of your samples, correct?  A. Yes.  Q. And on the right you have the peak area of Santonox R. What does the peak area mean?  A. It's just we're plotting you can see the photograph here of the peaks for Santonox R right above it, retention time.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	Q. What does peak area mean that's reported in Table 19?  A. Just integrate the area under the curve that's observed.  Q. Then you compare the peak area that you found for the explant samples against the control samples to determine the extent to which the Santonox R has been reduced, is that correct?  A. That's correct.  Q. So, for example, in 13674, the peak area is 315,246?  A. Correct.  Q. And you compare that to your control sample, 3398135, of 2,324,899, that's your pristine control sample?  A. That's pristine control. There's some variability there.  Q. And you'd conclude from that that the explant sample has a substantially diminished amount of Santonox R, correct?
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	antioxidants in the mesh?  A. That's correct.  Q. 1	MR. ANDERSON: Objection. Million.	1	A. That's the only explanation I can
2	MR. THOMAS: Thank you.	2	think of.
3	A. Millions, yes. But you're right.	3	Q. But you didn't study the extent to
4	BY MR. THOMAS:	4	which formalin impacts the antioxidants in the
5	Q. If you look at the formalin treated	5	mesh as a part of your analysis in this case,
6	control samples on Page 96 at Table 19, the	6	correct?
7	formalin treated control samples have less	7	MR. ANDERSON: Objection as to form.
8	Santonox R than the regular control samples,	8	Go ahead.
9	don't they?	9	A. No.
10	A. They do.	10	BY MR. THOMAS:
11	Q. Did you make any analysis to determine	11	Q. It's correct that you did not?
12	why?	12	A. I did not.
13	A. I would assume that that you have	13	Q. Thank you.
14	to assume by the data that that means that	14	Now, if you look at the same table,
15	the because it was the same 3405405 was	15	Table 19, you look at lot 3422128.
16	analyzed before and after the formalin	16	A. Where are we now?
17	treatment, so formalin treatment extracted some	17	Q. Under "Control Samples," same table,
18	of the antioxidant.	18	Table 19 on Page 96.
19	Q. Let's look at that, because the	19	A. Okay.
20	formalin treated control sample is 3405405, and	20	Q. You see that there's a control sample
21	it says 2,216,989.	21	which is lot number 3422128. Do you see that?
22	A. Right.	22	And a value of 4,550,748. Do you see that?
23	Q. If you go up to the control sample	23	A. I see it.
24	with the same lot number, that means it's the	24	Q. And then there is another a
25	same material, just with no formalin, correct?	25	duplicate of that same control sample also
	Page 115		Page 117
1	A. That's right.	1	tested. Do you see that?
2	Q. And the peak area there is 4,012,675,		
		2	A. Yes.
3	correct?	2 3	Q. And for that duplicate, that's the
4			Q. And for that duplicate, that's the same piece of mesh, isn't it?
4 5	correct? A. Yes. Q. Can't you conclude from that that the	3 4 5	Q. And for that duplicate, that's the same piece of mesh, isn't it? A. It's a different sample, but it would
4 5 6	correct? A. Yes. Q. Can't you conclude from that that the formalin is extracting the Santonox R from this	3 4 5 6	Q. And for that duplicate, that's the same piece of mesh, isn't it?  A. It's a different sample, but it would be the same piece of mesh, yes.
4 5 6 7	correct? A. Yes. Q. Can't you conclude from that that the formalin is extracting the Santonox R from this mesh sample?	3 4 5 6 7	Q. And for that duplicate, that's the same piece of mesh, isn't it? A. It's a different sample, but it would be the same piece of mesh, yes. Q. And that's a duplicate of the same
4 5 6 7 8	correct? A. Yes. Q. Can't you conclude from that that the formalin is extracting the Santonox R from this mesh sample? A. You can. Not completely, but it is.	3 4 5 6 7 8	Q. And for that duplicate, that's the same piece of mesh, isn't it?  A. It's a different sample, but it would be the same piece of mesh, yes.  Q. And that's a duplicate of the same test with the 4,550,748 test, right?
4 5 6 7 8 9	correct?  A. Yes. Q. Can't you conclude from that that the formalin is extracting the Santonox R from this mesh sample?  A. You can. Not completely, but it is. Q. Okay. Is there any other explanation	3 4 5 6 7 8 9	Q. And for that duplicate, that's the same piece of mesh, isn't it?  A. It's a different sample, but it would be the same piece of mesh, yes.  Q. And that's a duplicate of the same test with the 4,550,748 test, right?  A. Right.
4 5 6 7 8 9	correct?  A. Yes. Q. Can't you conclude from that that the formalin is extracting the Santonox R from this mesh sample?  A. You can. Not completely, but it is. Q. Okay. Is there any other explanation for what's going on there?	3 4 5 6 7 8 9	Q. And for that duplicate, that's the same piece of mesh, isn't it?  A. It's a different sample, but it would be the same piece of mesh, yes.  Q. And that's a duplicate of the same test with the 4,550,748 test, right?  A. Right.  Q. And the value that you get for the
4 5 6 7 8 9 10	correct?  A. Yes.  Q. Can't you conclude from that that the formalin is extracting the Santonox R from this mesh sample?  A. You can. Not completely, but it is.  Q. Okay. Is there any other explanation for what's going on there?  A. I don't think so.	3 4 5 6 7 8 9 10	Q. And for that duplicate, that's the same piece of mesh, isn't it?  A. It's a different sample, but it would be the same piece of mesh, yes.  Q. And that's a duplicate of the same test with the 4,550,748 test, right?  A. Right.  Q. And the value that you get for the duplicate sample is 5,418,177, correct?
4 5 6 7 8 9 10 11	correct? A. Yes. Q. Can't you conclude from that that the formalin is extracting the Santonox R from this mesh sample? A. You can. Not completely, but it is. Q. Okay. Is there any other explanation for what's going on there? A. I don't think so. Q. Now, if you look at the other formalin	3 4 5 6 7 8 9 10 11 12	Q. And for that duplicate, that's the same piece of mesh, isn't it?  A. It's a different sample, but it would be the same piece of mesh, yes.  Q. And that's a duplicate of the same test with the 4,550,748 test, right?  A. Right.  Q. And the value that you get for the duplicate sample is 5,418,177, correct?  A. Correct.
4 5 6 7 8 9 10 11 12 13	correct? A. Yes. Q. Can't you conclude from that that the formalin is extracting the Santonox R from this mesh sample? A. You can. Not completely, but it is. Q. Okay. Is there any other explanation for what's going on there? A. I don't think so. Q. Now, if you look at the other formalin control sample, lot number 3422128, it shows a	3 4 5 6 7 8 9 10 11 12 13	Q. And for that duplicate, that's the same piece of mesh, isn't it?  A. It's a different sample, but it would be the same piece of mesh, yes.  Q. And that's a duplicate of the same test with the 4,550,748 test, right?  A. Right.  Q. And the value that you get for the duplicate sample is 5,418,177, correct?  A. Correct.  Q. Do you have any explanation for the
4 5 6 7 8 9 10 11 12 13 14	correct? A. Yes. Q. Can't you conclude from that that the formalin is extracting the Santonox R from this mesh sample? A. You can. Not completely, but it is. Q. Okay. Is there any other explanation for what's going on there? A. I don't think so. Q. Now, if you look at the other formalin control sample, lot number 3422128, it shows a peak area of 1,019,604. And if you compare that	3 4 5 6 7 8 9 10 11 12 13	Q. And for that duplicate, that's the same piece of mesh, isn't it?  A. It's a different sample, but it would be the same piece of mesh, yes.  Q. And that's a duplicate of the same test with the 4,550,748 test, right?  A. Right.  Q. And the value that you get for the duplicate sample is 5,418,177, correct?  A. Correct.  Q. Do you have any explanation for the difference in peak areas between these two, what
4 5 6 7 8 9 10 11 12 13 14 15	correct?  A. Yes.  Q. Can't you conclude from that that the formalin is extracting the Santonox R from this mesh sample?  A. You can. Not completely, but it is.  Q. Okay. Is there any other explanation for what's going on there?  A. I don't think so.  Q. Now, if you look at the other formalin control sample, lot number 3422128, it shows a peak area of 1,019,604. And if you compare that to the same control sample without formalin, the	3 4 5 6 7 8 9 10 11 12 13 14 15	Q. And for that duplicate, that's the same piece of mesh, isn't it?  A. It's a different sample, but it would be the same piece of mesh, yes.  Q. And that's a duplicate of the same test with the 4,550,748 test, right?  A. Right.  Q. And the value that you get for the duplicate sample is 5,418,177, correct?  A. Correct.  Q. Do you have any explanation for the difference in peak areas between these two, what should be duplicate samples?
4 5 6 7 8 9 10 11 12 13 14 15 16	correct?  A. Yes.  Q. Can't you conclude from that that the formalin is extracting the Santonox R from this mesh sample?  A. You can. Not completely, but it is.  Q. Okay. Is there any other explanation for what's going on there?  A. I don't think so.  Q. Now, if you look at the other formalin control sample, lot number 3422128, it shows a peak area of 1,019,604. And if you compare that to the same control sample without formalin, the number is 4,550,748, correct?	3 4 5 6 7 8 9 10 11 12 13 14 15 16	Q. And for that duplicate, that's the same piece of mesh, isn't it?  A. It's a different sample, but it would be the same piece of mesh, yes.  Q. And that's a duplicate of the same test with the 4,550,748 test, right?  A. Right.  Q. And the value that you get for the duplicate sample is 5,418,177, correct?  A. Correct.  Q. Do you have any explanation for the difference in peak areas between these two, what should be duplicate samples?  A. It should be duplicate samples, but
4 5 6 7 8 9 10 11 12 13 14 15 16 17	correct?  A. Yes.  Q. Can't you conclude from that that the formalin is extracting the Santonox R from this mesh sample?  A. You can. Not completely, but it is.  Q. Okay. Is there any other explanation for what's going on there?  A. I don't think so.  Q. Now, if you look at the other formalin control sample, lot number 3422128, it shows a peak area of 1,019,604. And if you compare that to the same control sample without formalin, the number is 4,550,748, correct?  A. Yes, you're right.	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	Q. And for that duplicate, that's the same piece of mesh, isn't it?  A. It's a different sample, but it would be the same piece of mesh, yes.  Q. And that's a duplicate of the same test with the 4,550,748 test, right?  A. Right.  Q. And the value that you get for the duplicate sample is 5,418,177, correct?  A. Correct.  Q. Do you have any explanation for the difference in peak areas between these two, what should be duplicate samples?  A. It should be duplicate samples, but it's a different it's actually a different
4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	correct?  A. Yes.  Q. Can't you conclude from that that the formalin is extracting the Santonox R from this mesh sample?  A. You can. Not completely, but it is. Q. Okay. Is there any other explanation for what's going on there?  A. I don't think so. Q. Now, if you look at the other formalin control sample, lot number 3422128, it shows a peak area of 1,019,604. And if you compare that to the same control sample without formalin, the number is 4,550,748, correct?  A. Yes, you're right. Q. And it's more than four times the	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	Q. And for that duplicate, that's the same piece of mesh, isn't it?  A. It's a different sample, but it would be the same piece of mesh, yes.  Q. And that's a duplicate of the same test with the 4,550,748 test, right?  A. Right.  Q. And the value that you get for the duplicate sample is 5,418,177, correct?  A. Correct.  Q. Do you have any explanation for the difference in peak areas between these two, what should be duplicate samples?  A. It should be duplicate samples, but it's a different it's actually a different region in the mesh. So it could be due to the
4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	correct?  A. Yes.  Q. Can't you conclude from that that the formalin is extracting the Santonox R from this mesh sample?  A. You can. Not completely, but it is.  Q. Okay. Is there any other explanation for what's going on there?  A. I don't think so.  Q. Now, if you look at the other formalin control sample, lot number 3422128, it shows a peak area of 1,019,604. And if you compare that to the same control sample without formalin, the number is 4,550,748, correct?  A. Yes, you're right.  Q. And it's more than four times the amount of Santonox in the pristine sample than	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	Q. And for that duplicate, that's the same piece of mesh, isn't it?  A. It's a different sample, but it would be the same piece of mesh, yes.  Q. And that's a duplicate of the same test with the 4,550,748 test, right?  A. Right.  Q. And the value that you get for the duplicate sample is 5,418,177, correct?  A. Correct.  Q. Do you have any explanation for the difference in peak areas between these two, what should be duplicate samples?  A. It should be duplicate samples, but it's a different it's actually a different region in the mesh. So it could be due to the fact that the antioxidant is not completely
4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	correct?  A. Yes.  Q. Can't you conclude from that that the formalin is extracting the Santonox R from this mesh sample?  A. You can. Not completely, but it is.  Q. Okay. Is there any other explanation for what's going on there?  A. I don't think so.  Q. Now, if you look at the other formalin control sample, lot number 3422128, it shows a peak area of 1,019,604. And if you compare that to the same control sample without formalin, the number is 4,550,748, correct?  A. Yes, you're right.  Q. And it's more than four times the amount of Santonox in the pristine sample than there is in the formalin sample, correct?	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	Q. And for that duplicate, that's the same piece of mesh, isn't it?  A. It's a different sample, but it would be the same piece of mesh, yes.  Q. And that's a duplicate of the same test with the 4,550,748 test, right?  A. Right.  Q. And the value that you get for the duplicate sample is 5,418,177, correct?  A. Correct.  Q. Do you have any explanation for the difference in peak areas between these two, what should be duplicate samples?  A. It should be duplicate samples, but it's a different it's actually a different region in the mesh. So it could be due to the fact that the antioxidant is not completely evenly distributed in the mesh, so there's
4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	correct?  A. Yes.  Q. Can't you conclude from that that the formalin is extracting the Santonox R from this mesh sample?  A. You can. Not completely, but it is.  Q. Okay. Is there any other explanation for what's going on there?  A. I don't think so.  Q. Now, if you look at the other formalin control sample, lot number 3422128, it shows a peak area of 1,019,604. And if you compare that to the same control sample without formalin, the number is 4,550,748, correct?  A. Yes, you're right.  Q. And it's more than four times the amount of Santonox in the pristine sample than there is in the formalin sample, correct?  A. Correct.	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	Q. And for that duplicate, that's the same piece of mesh, isn't it?  A. It's a different sample, but it would be the same piece of mesh, yes.  Q. And that's a duplicate of the same test with the 4,550,748 test, right?  A. Right.  Q. And the value that you get for the duplicate sample is 5,418,177, correct?  A. Correct.  Q. Do you have any explanation for the difference in peak areas between these two, what should be duplicate samples?  A. It should be duplicate samples, but it's a different it's actually a different region in the mesh. So it could be due to the fact that the antioxidant is not completely evenly distributed in the mesh, so there's regions of higher and lower concentration.
4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	correct?  A. Yes.  Q. Can't you conclude from that that the formalin is extracting the Santonox R from this mesh sample?  A. You can. Not completely, but it is.  Q. Okay. Is there any other explanation for what's going on there?  A. I don't think so.  Q. Now, if you look at the other formalin control sample, lot number 3422128, it shows a peak area of 1,019,604. And if you compare that to the same control sample without formalin, the number is 4,550,748, correct?  A. Yes, you're right.  Q. And it's more than four times the amount of Santonox in the pristine sample than there is in the formalin sample, correct?  A. Correct.  Q. And you have to conclude that the	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	Q. And for that duplicate, that's the same piece of mesh, isn't it?  A. It's a different sample, but it would be the same piece of mesh, yes.  Q. And that's a duplicate of the same test with the 4,550,748 test, right?  A. Right.  Q. And the value that you get for the duplicate sample is 5,418,177, correct?  A. Correct.  Q. Do you have any explanation for the difference in peak areas between these two, what should be duplicate samples?  A. It should be duplicate samples, but it's a different it's actually a different region in the mesh. So it could be due to the fact that the antioxidant is not completely evenly distributed in the mesh, so there's regions of higher and lower concentration.  Q. Do you know?
4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	correct?  A. Yes.  Q. Can't you conclude from that that the formalin is extracting the Santonox R from this mesh sample?  A. You can. Not completely, but it is. Q. Okay. Is there any other explanation for what's going on there?  A. I don't think so. Q. Now, if you look at the other formalin control sample, lot number 3422128, it shows a peak area of 1,019,604. And if you compare that to the same control sample without formalin, the number is 4,550,748, correct?  A. Yes, you're right. Q. And it's more than four times the amount of Santonox in the pristine sample than there is in the formalin sample, correct?  A. Correct. Q. And you have to conclude that the reason why there's less in the formalin treated	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	Q. And for that duplicate, that's the same piece of mesh, isn't it?  A. It's a different sample, but it would be the same piece of mesh, yes.  Q. And that's a duplicate of the same test with the 4,550,748 test, right?  A. Right.  Q. And the value that you get for the duplicate sample is 5,418,177, correct?  A. Correct.  Q. So it could be due to the fact that the antioxidant is not completely evenly distributed in the mesh, so there's regions of higher and lower concentration.  Q. Do you know?

30 (Pages 114 to 117)

	Page 118		Page 120
1	and the duplicate control sample of the pristine	1	Q. You had samples in the formalin
2	mesh tested almost a million DAs apart, does	2	control for how long? 48 hours at 60 degrees
3	that cause you any concern at all?	3	centigrade?
4	A. Well, if it's different it's	4	A. Yes.
5	different. I can't control that.	5	Q. Did you make any effort to correlate
6	Q. Okay. Does the fact that the control	6	the aging by that amount to the samples that are
7	sample lot 3422128, the duplicate, shows a peak	7	contained in Table 19 to determine whether
8	area of 5,418,177, and the formalin treated	8	they're equivalent?
9	control sample for the same piece of mesh is	9	A. No.
10	less than 20 percent of that value, does that	10	Q. It would be appropriate in any
11	have any concern cause you any concern about	11	scientific analysis to make sure that when
12	the opinions you have in the case?	12	you're comparing formalin exposure, you want
13	A. Where are we here? Sorry.	13	them to be equal to make sure that they reflect
14	Q. Okay. We're at Table 19, Page 96.	14	accurate values?
15	You have	15	A. Well, the only way to do that, it
16	A. Duplicate.	16	would be rather impossible in this case, it
17	Q. You have your duplicate lot for	17	would have had to have been implanted in tissue,
18	3422128, the value is 5,418,177. And the same	18	and had to have been implanted and stored in the
19	piece of mesh treated with formalin is less than	19	formaldehyde for you know, like we'd have to
20	20 percent the concentration of Santonox R as	20	take controls. I don't know how we'd put
21	you found in your pristine sample.	21	controls in tissue. There's all kinds of
22	A. Yes. It looks like formalin is	22	possible requirements to do that technically.
23	extracting it, as we said before.	23	Q. Is it fair to conclude based on the
24	Q. Why didn't you note that in your	24	data in your report, at least with respect to
25	report?	25	lot number 3422128, the duplicate sample, and
	Page 119		Page 121
1	MR. ANDERSON: Objection.	1	the formalin control sample, that the formalin
2	A. I did. It's in the table.	2	is responsible for extracting over 80 percent of
3	BY MR. THOMAS:	3	the Santonox R?
4	Q. Why didn't you discuss it in your	4	A. Given the spread on the data, it's
5	report?	5	certainly it is suggestive of that. But
6	A. Well, there's normally experimental	6	again, it could be 40 percent or 60 percent or
7	error, I can't it's possible that this	7	50 percent because it could be a different
8	million is there because instead of 2 million	8	region of the fiber itself. We have normal
9	because, again, we hit a region of lower	9	spread if we run a duplicate like above.
10	concentration of the Santonox R, that could be	10	Q. Let's go above. It's even if you
11	part of the reason. Because we see spread in	11	go to the duplicate above
12	the other control values as well.	12	A. That's what that's not 80 percent
13	Q. Doctor, isn't the best evidence based	13	difference from the duplicate, it's 20 percent.
14	upon the work that you did in this case that the	14	Q. It's almost 50 percent, isn't it?
15	formalin is extracting the antioxidants from the	15	A. No. 4,550,000 versus 5,400,000.
16	mesh?	16	Q. But those are not formalin treated?
17	MR. ANDERSON: Objection as to form.	17	A. No, but that shows the natural
18	Go ahead.	18	variability of the mesh.
19	A. Well, it is extracting some of the	19	Q. But you only okay.
20	Santonox R. However, even at the lowest level	20	The only data that you have on your
21		21	tests under the LCMS of these explanted meshes
	for the majority of these samples, like 13416,		
22	13418, 13421, there's 67,000 counts to 100,000	22	are contained in this report, correct?
23	13418, 13421, there's 67,000 counts to 100,000 counts, which is 10 to 15 times less than even	22 23	are contained in this report, correct?  A. That's correct.
	13418, 13421, there's 67,000 counts to 100,000	22	are contained in this report, correct?

31 (Pages 118 to 121)

	Page 122		Page 124
1	A. That's correct.	1	A. It did not remove at all. It didn't
2	Q. And you could have tested other	2	remove it to the same levels as seen in the
3	regions in the mesh to determine the extent to	3	explants.
4	which the antioxidants varied across the mesh,	4	BY MR. THOMAS:
5	correct?	5	Q. But it's true to a reasonable degree
6	A. Theoretically. We did a huge amount	6	of scientific certainty as reflected by your
7	of work to begin with, so it's all a relative	7	data that the formalin removed more than
8		8	80 percent of the antioxidants as expressed in
9	what you're capable of doing in the required	9	that data?
10	time and all the rest of it, so it's just a	10	
	judgment call.		MR. ANDERSON: Objection.
11	Q. The reason why you did testing was to	11	A. I have to look at the numbers.
12	have the data points upon which you could	12	(Witness reviewing document.)
13	predicate your opinions?	13	A. The samples that's true. And in
14	A. That's right.	14	the samples as received, we had like 1, 2 or
15	Q. And these are the only data points	15	3 percent left, not 80 percent. We only had
16	that you have upon which to predicate your	16	so it had 97, 98, 99 percent removed in the
17	opinions?	17	explants we received. Still greater.
18	A. That's right.	18	BY MR. THOMAS:
19	MR. ANDERSON: Well, objection to	19	Q. But you don't know how long those
20	form.	20	explants were exposed to formalin, do you?
21	A. Not the only, but it's one of.	21	A. No, I do not.
22	BY MR. THOMAS:	22	Q. And the length of time those explants
23	Q. For this issue, for the LCMS data?	23	may have been exposed to formalin would impact
24	A. For Santonox R for the LCMS data, for	24	the extent to which the formalin extracted the
25	the lauryl thiodipropionate, for example.	25	antioxidants, correct?
	Page 123		Page 125
1	Q. As a scientist who works in	1	A. Presumably.
2	biochemistry and uses this type equipment, does	2	Q. Well, absent any testing showing you
3	the variability in the data in Table 19 on	3	otherwise, that would be the logical conclusion
4	Page 96 suggest to you the need to do additional	4	from this data, wouldn't it?
5	testing to confirm the extent to which formalin	5	A. Yes.
6	was involved in the extraction of the	6	MR. THOMAS: Let's eat.
7	antioxidants?	7	(Whereupon, a luncheon recess was
8	A. That would be a good idea, sure.	8	taken at 12:15 p.m.)
9	Q. Because the data as expressed here is	9	taken at 12.15 p.m.)
10	not reliable, is it?	10	
11			
	A. Well, that's a relative term. I think	11	
12	we certainly got nowhere near the levels seen in	12	
13	the explants.	13	
14	Q. Is it still your opinion that to a	14	
15	reasonable degree of scientific certainty that	15	
16	formalin has no impact on the Santonox R in the	16	
17	mesh as implanted in a person?	17	
18	A. As implanted in a person, I don't	18	
19	Q. Bad question.	19	
20	Is it still your opinion to a	20	
21	reasonable degree of scientific certainty that	21	
22	the formalin had no impact on the measurement of	22	
23	antioxidants in the meshes analyzed by you, the	23	
24	explants?	24	
25	MR. ANDERSON: Objection.	25	

32 (Pages 122 to 125)

1	Page 126		Page 128
_	AFTERNOON SESSION	1	case has been done since the testing work
2	1:12 O'CLOCK P.M.	2	itself has been done since September. Does that
3		3	seem about right?
4	BY MR. THOMAS:	4	A. Yes.
5	Q. Let's spend a little time with your	5	Q. Okay. In Table 2 on Page 15 there's
6	report, Dr. Jordi.	6	identification of the sample, weight, fibers.
7	A. Okay.	7	Is that molecular what is the weight for
8	Q. The report in the Lewis case. Let's	8	that? What does that mean?
9	go back to Page 16 again.	9	A. That was the amount of fibers that
10	Table 2 on Page 16, it begins on Table	10	were able to be extracted. So when you look at
11	on Page 15, I guess, to be fair.	11	the picture of the on Page 16 at the bottom
12	A. Yes.	12	left, those fibers after they were removed from
13	Q. Table 2 represents what?	13	tissue were weighed.
14	A. Table 2 represents a grid of the tests	14	Q. Okay. Is there any weight of a tissue
15	that were run.	15	that you have?
16	Q. There is a number of sample	16	A. No. We had no plans for analysis of
17	identification numbers beginning with 13400 that	17	the tissue.
18	run to 13421. I assume you did all of those	18	Q. Did you retain the mesh fibers that
19	tests at once, or about the same time?	19	are in Figure 2?
20	A. About the same time. We received the	20	A. Well, we would have if there were any
21	Lewis case a little bit later, so it was run a	21	to maintain. There may be tidbits of a couple
22	little bit later.	22	of them. But with all the testing that was
23	Q. Is it your practice to number the	23	done, we were extremely sample constrained.
24	testing that you do in your labs sequentially?	24	Q. How about the tissue samples, did you
25	A. Yes.	25	retain any of the tissue samples?
	Page 127		Page 129
1	Q. Is there any significance to the	1	A. No. We had no further use for the
2	numbers, other than the time that you do it?	2	tissue.
3	A. I don't believe so. It's just the	3	Q. Under the 13674, you understand that
4	standard SOP numbering.	4	to be the Carolyn Lewis sample?
5	Q. Okay. When did you do the testing for	5	A. Yes, I do.
6	13400 to 13421, over what period of time. I	6	Q. There's no weight taken there. Do you
	don't think you'll find it in your report. I've	7	
7		l .	know why?
8	got the bills here if that helps.	8	A. It was an oversight. It's

Looks like about the start was 9/9.  MR. ANDERSON: Look at your lab notebooks instead of saying "about."  THE WITNESS: I did look at the lab notebook there.  These were all these samples that are in that grid, so 9/11, 9/13.  BY MR. THOMAS:	8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	A. It was an oversight. It's 7.62 milligrams. It's in the book. Q. Okay. So it's in your lab notebook, but never made it to your report? A. That was a glitch. It should have made it to the report. It didn't make it to the report. Q. What's the significance of A. It's 7.62 if you want to write it in so you've got the exact number. Q. What is the significance of that number to your analysis? A. The milligrams? Q. Yes, the weight of the fibers that you receive. A. It's just a fact of what we got.
8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	MR. ANDERSON: Lab notebooks would help, too.  A. Lab notebooks would probably be better.  BY MR. THOMAS: Q. Okay. (Witness reviewing documents.) A. Looks like about the start was 9/9. MR. ANDERSON: Look at your lab notebooks instead of saying "about." THE WITNESS: I did look at the lab notebook there. These were all these samples that are in that grid, so 9/11, 9/13.	8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	A. It was an oversight. It's 7.62 milligrams. It's in the book. Q. Okay. So it's in your lab notebook, but never made it to your report? A. That was a glitch. It should have made it to the report. It didn't make it to the report. Q. What's the significance of A. It's 7.62 if you want to write it in so you've got the exact number. Q. What is the significance of that number to your analysis? A. The milligrams? Q. Yes, the weight of the fibers that you receive.

33 (Pages 126 to 129)

Page 130 Page 132 1 1 sample analysis chart, it lists the tests done background in polymer science, this level of 2 2 on each sample, correct? degradation will have a strong impact on fiber 3 A. Correct. 3 mechanical properties, including stiffness, 4 4 Q. You didn't do all of the tests on all elasticity, and resistance to break." 5 5 What level of degradation are you the samples? 6 6 A. Correct. describing in that sentence? 7 7 Q. Why? A. We're describing the very obvious A. Some cases there just wasn't enough 8 8 cracking seen in the SEM photographs. 9 sample to do them all. And other cases we --9 Q. Okay. So the level that you're 10 like we ran SEM and optical microscopy on all 10 describing there relates solely to what you the samples. SEM-EDX, once we've seen increased 11 observed in the SEM photographs, images? 11 12 oxygen six times, we didn't feel it was 12 A. At this point, yes. necessary to run them all. It's already a huge 13 13 Q. All right. "Will have a strong impact 14 on fiber mechanical properties." What does that 14 report. The volume of work was so great that we 15 made choices when we had acquired what we 15 term mean to you? How much is strong? 16 16 considered a significant level of work. Once I A. Well, we weren't able to run physical 17 prove something six times, I don't need to prove 17 testing that we normally would run, because we 18 18 didn't have enough material, but we could feel, it seven, eight, nine, ten times. Part of it 19 was lack of sample, part of it was we'd run 19 one way is to feel it. The material explanted 20 enough to be consistent to show the point of the 20 material had a much more rigid feeling to it, I 21 21 various analyses. guess the best word is rigid, rigid feeling to 22 22 Q. Did the expense of the test have it than the controls. 23 23 anything to do with it, the expense of each of Q. Okay. 24 the tests? 24 A. It was very obvious. 25 A. I'm sure that wasn't the overriding --25 Q. Is that the only information that you Page 131 Page 133 1 that wasn't the overriding thing. 1 have that the level of degradation that you 2 Q. Did you determine which fibers to test 2 observed would have a strong impact on fiber 3 with which test, or were you directed in that 3 mechanical properties? 4 regard? 4 A. No. If I looked at the actual flaking 5 A. No. We discussed that, and we just 5 and the cracking and so on and so forth, that's б made a choice of statistical significance. б got to have a massive effect. It's a large --Q. Who made that decision? 7 7 it covers the entire region of some of the 8 8 A. Well, my son Mark and I. fibers. 9 Q. Okay. What considerations did you 9 Q. Okay. You call it strong, you said have in determining, for example, to do all of 10 massive. What does that mean? 10 the OM and SEMs, but only some of the SEM-EDX? 11 A. Well, the best way I can show it is 11 12 12 MR. ANDERSON: Objection. Asked and with a picture. answered. Q. Okay. 13 13 A. Do you want to see one? 14 Go ahead. 14 Q. You've showed them to me, and I've 15 A. We just didn't feel it was -- we had 15 showed the point, and we just thought we had seen them. 16 16 done enough work. And we had a huge work 17 17 In terms of quantifying, placing a 18 product to begin with. 18 number on the impact on the mechanical BY MR. THOMAS: 19 19 properties, you're not able to do that, is that 20 Q. Okay. Is there a reason -- strike 20 fair? 21 21 A. I think you could certainly say it was that. 22 Let's go to Page 19. Page 19 in the 22 great -- very greatly cracked or moderately 23 middle of the page, it reads this. "It is my 23 cracked, something like that in general. 24 opinion to a reasonable degree of scientific 24 Putting a number score on it would be difficult, 25 25 certainty based upon my experience and my yes. But it certainly is not hard to look at a

34 (Pages 130 to 133)

Page 134 Page 136 1 fiber mesh." 1 sample that's grossly cracked and see that it's 2 2 grossly cracked. There's nothing in there that I saw 3 Q. You say that it's "going to have a 3 that suggested that you compared the formalin 4 4 strong impact on fiber mechanical properties, control samples. Do you recall testing the 5 5 including stiffness." formalin control samples in the same way that 6 6 What impact will this degradation have you tested the control samples and the explants? 7 7 A. It's not specifically mentioned, but on stiffness? 8 8 A. Cracking, the cracking to me is we felt them. 9 9 indicative of some -- is a form of degradation, Q. Okay. And it's your recollection and 10 at least it's a result of the chemical 10 testimony that the explanted samples felt 11 11 degradation, results in a physical splintering stiffer than the control samples? 12 that we see. So that when it's largely cracked, 12 A. Most definitely. 13 Q. And did you arrive at any conclusions 13 that also implies that the material underneath 14 about what caused that stiffness? 14 it is probably cracking, too. And I prove that 15 by showing the SEM-EDX and showing the increased 15 A. At the time it was done, we hadn't 16 16 oxygen levels in the level underneath the done the other testing, so I had no reason or 17 cracks, that's the next layer that will crack. 17 cause. After all the work that's done and 18 18 Q. Thank you, Doctor. reported here in this report, the infrared 19 My question is; what level of --19 showed oxidation, the SEM-EDX shows oxidation, 20 20 the lack of antioxidants would suggest strike that. 21 21 What amount of stiffness is impacted susceptibility to oxidation, and so on. 22 22 Q. Okay. The sentence also references by the level of degradation that you observed in 23 23 the SEM images? What's the -- how can you elasticity. Was the elasticity also something 24 quantify the level of stiffness? 24 that you observed in the handling of the mesh? 25 A. I can just feel it. I'm sorry, I 25 A. Right. If you bent the original --Page 135 Page 137 1 can't give you a number. 1 the pristine mesh it would come -- pop right 2 Q. And just so it's clear, the only thing 2 back to shape. And the other, you had to apply 3 that you have to go on about the stiffness is 3 more force to get it bent, and it would come 4 holding the explant in your hands? 4 back and sometimes would stay partially bent, or 5 5 A. In the gloved hands. sometimes would crack. 6 б Q. Okay. Q. Is it the handling of the mesh the A. And -- yes. 7 7 only basis for your opinion that the explanted 8 8 Q. Comparing it to -mesh was less elastic than the control? 9 A. To the control. 9 A. As a comment here, yes, because that's Q. -- the control. 10 a point where we were running SEM. 10 11 Did you compare that to the formalin 11 Q. And likewise, with the resistance to control, or just the control? 12 12 break, did you observe that in your handling as 13 A. I think we felt them all. 13 well? A. That's right. 14 Q. I didn't see any reference in your 14 report to the formalin control. 15 15 Q. And is it fair to understand that it's Do you have a -- is it your practice 16 your handling of the explanted mesh as compared 16 when you test the formalin controls to reference 17 to the control mesh that's the basis for your 17 18 that in your report? 18 opinion that the explanted mesh had less A. Reference what in the report? 19 resistance to break than the control mesh? 19 20 Q. The fact that you did it. 20 A. Yes. The control mesh never broke. If you go on Page 17, it's where you 21 21 Q. Did you ever investigate any talk about handling it. Page 17 says "It was 22 22 alternative potential causes to more stiffness, 23 noted during sample preparation that a readily 23 less elasticity, or more resistance to break? 24 apparent difference in fiber stiffness existed 24 A. No. We were going after chemical 25 25 between the control samples and the explanted analysis of the polypropylene and the

35 (Pages 134 to 137)

Page 138 Page 140 1 1 differences, if any. Q. How do you know that's the way it was 2 2 Q. Did you ever consider any other inside the body? 3 chemical contributions to increased stiffness --3 A. Well, it was in the tissue when it 4 4 strike that. came, and we didn't take it out of the tissue 5 5 when we sent it -- when we ran the SEM, so we Did you ever consider whether formalin 6 6 could contribute to increased stiffness, less didn't do anything different than it was in the 7 7 elasticity, or less resistance to break? body environmentally. We did that on purpose. 8 A. We felt it. The same, it felt the 8 Q. You didn't do anything differently, 9 9 same. but the doctors did something differently when 10 10 they removed the mesh, didn't they? Q. Did you consider that at the time? 11 11 A. If it had been different it would have A. Well, they took it out of the body, 12 12 been reported. The fact that it was a formalin yes. 13 13 treated control would be part of the control Q. What else did they do? 14 A. Put it in formalin. 14 package. 15 Q. Well, the formalin treated control 15 Q. Okay. Do you know what impact the 16 16 observations weren't even called out in your formalin has on the proteins and other -- strike 17 report, right? 17 A. That's right, they weren't. 18 18 Do you have any knowledge or 19 Q. Okay. Did you ever consider the 19 information about what formalin does to the 20 extent to which formalin and a chemical reaction 20 materials in the body that surround the mesh? with the proteins on the mesh could lead to an 21 MR. ANDERSON: Objection to form. 21 22 22 increased stiffness, a reduced elasticity, or a A. It will react with the tissue, but it 23 23 reduced resistance to break? will not react -- we ran controls in formalin 24 A. No. 24 here, and we showed it didn't change the SEM. 25 Q. Down in the middle of that paragraph 25 BY MR. THOMAS: Page 139 Page 141 you say "Sharp or protruding surfaces could 1 1 Q. But the ones you ran in formalin 2 result." 2 didn't have any tissue on them. 3 Do you have an opinion to a reasonable 3 MR. ANDERSON: Wait a minute, Dave, in 4 degree of scientific certainty that any sharp or 4 fairness let him finish his answer. 5 protruding surfaces resulted from any of these 5 MR. THOMAS: You're right. pieces of mesh? 6 б A. We ran formalin treated controls here 7 7 A. Where are we reading here? to see if it would do anything obvious to the Q. Right in the middle of that paragraph. 8 8 pristine. It did not. 9 MR. ANDERSON: Page 19. 9 BY MR. THOMAS: A. Oh, 17. All right. Which paragraph? 10 Q. But the formalin controls that you ran 10 MR. ANDERSON: You're on 18. He 11 11 didn't have any tissue on them. wanted 19. He's going to keep going through 12 A. That's correct. So what? 12 13 this paragraph, so here's where he is right now. 13 Q. And my question is whether you know 14 A. "Sharp protruding..." 14 whether formalin will react with the tissue on 15 (Witness reviewing document.) 15 the mesh so as to impact the appearance in the A. Okay. Question again, please? 16 SEM images. Do you know that? 16 17 BY MR. THOMAS: A. Absolutely not. It will react with 17 18 Q. Do you have an opinion to a reasonable 18 the tissue, absolutely. It's irrelevant. It's degree of scientific certainty that any sharp or 19 not going to react with the mesh. It will 19 20 protruding surfaces resulted on any of the mesh 20 react -- not react with the mesh in the tissue, 21 21 explants that you reviewed in vivo? it will react with the tissue which we removed, 22 MR. ANDERSON: Objection to form. 22 so it's no longer there when we did the testing. 23 A. We saw the sharp edges in the SEM 23 Q. Is it your testimony there was no --24 A. There was tissue on when the SEMs were 24 photos. BY MR. THOMAS: 25 25 run. We didn't want that removed because didn't

36 (Pages 138 to 141)

Page 142 Page 144 1 1 want to in any way disturb the mesh in any way A. That was well understood in that we 2 2 had very little response. Because in that case, that we could possibly avoid, so we tried our 3 3 very best not to cause anything, any changes. unlike this case, we had a polymer in polylactic 4 4 So we ran the SEMs in the tissue, which we could and polyglycolic acid which degraded to lactic 5 5 acid and glycolic acid, both of which are normal 6 6 body chemicals that don't cause a tissue Q. What is your area of expertise that 7 7 allows you to give the opinion that "Prolene response of any consequence. 8 mesh in the TVT products degrades, cracks, and 8 Q. Was it your job to determine the 9 9 releases polypropylene particulates into the extent to which the jaw implant would integrate 10 surrounding tissue after implantation, causing 10 into the tissue? 11 an increased inflammatory response"? Are you 11 A. To observe it. 12 12 trained to give that opinion? Q. Was it your job to determine the 13 13 A. I certainly am. I'm a polymer adequacy of the design of the jaw implant to be 14 14 chemist, a biochemist, and we actually saw the accepted by the tissue? 15 shards, we saw how easily the shards came off, 15 A. Well, we worked as a team. There was 16 16 and then we actually took an infrared of it to a number of us. 17 show that they were polypropylene. So we 17 Q. But there were other people whose 18 18 actually did it and we saw it. primarily responsibility was to determine the 19 Q. That's not -- that's a good answer. I 19 extent to which the implant was compatible with 20 should have asked a better question. 20 existing tissue, wasn't it? 21 21 What's your training, education, and A. That work had been done prior, it had experience that allows you to give the opinion 22 22 been shown to be compatible. 23 that those pieces that you claim break off 23 Q. But that was not your job? 24 caused an increased inflammatory response? 24 A. No. 25 A. What's my basis? 25 Q. Somebody else did that work? Another Page 143 Page 145 1 Q. Yes. What's your training? expertise was required to make that finding, 2 A. I'm a biochemist. 2 correct? 3 Q. As a part -- have you analyzed the 3 A. Right. 4 effect of polymer degradation in humans prior to 4 Q. And so --5 this litigation? 5 A. But it's not unreasonable to observe 6 б A. I worked on bio-implantable polymers polypropylene shards coming off, which are 7 7 when I was in the Army at Walter Reed Army little knives. They're going to cut the tissue 8 8 Medical Center, polylactic acid, polyglycolic when they come off in it. You can see it under 9 acid copolymers. 9 microscope, and that's going to cause bleeding Q. Was your work there --10 and an inflammatory response. 10 11 MR. ANDERSON: He's not finished. 11 Q. How big are these shards you're 12 12 talking about? 13 A. We were replacing parts of jaws in 13 A. Well, let's go look at a picture. 14 animals with a goal of being able to replace a 14 We've got a scale on it. They vary. 15 blown off jaw on a soldier, put a piece of 15 Q. How big is that one? What page are implantable material in the jaw, and then we you on? 16 16 wanted the tissue to grow into it, so we put 17 17 A. 69. 18 things in the PLA-PG polymer so tissue would 18 Q. How big is it? 19 MR. ANDERSON: Which piece? There's 19 tend to grow in, and ultimately the jaw would be 20 replaced with new jaw, and it worked fairly 20 pieces all over the place. 21 21 MR. THOMAS: The piece he has well. 22 BY MR. THOMAS: 22 highlighted right there. 23 Q. Was it your job to determine the 23 MR. ANDERSON: Okay. 24 extent to which the implant would be accepted by 24 A. Well, the mesh itself is, what, 70, 25 25 existing tissue? 80 microns, so it's got to be -- this is a good

37 (Pages 142 to 145)

	Page 146		Page 148
1	size piece, so it's probably 20 microns,	1	you draw a circle around what you've described
2	10 microns, 20 microns, depends on the piece.	2	as the polypropylene.
3	BY MR. THOMAS:	3	MR. ANDERSON: On his copy? Do you
4	Q. And it's your opinion that that cuts	4	want to put it on let's put it on the record
5	tissue?	5	copy.
6	A. Absolutely. If it's got sharp edges	6	MR. THOMAS: That's what I thought he
7	like this and you're moving around and	7	was looking at. I'm sorry.
8	exercising, it's got to drive it into	8	A. It would be the same page.
9	whatever	9	BY MR. THOMAS:
10	Q. What have you done to study the extent	10	Q. So we're on Page 42 of Exhibit 1.
11	to which a shard as depicted on the Page 69 is	11	A. Yes.
12	going to have any impact at all in terms of	12	MR. ANDERSON: You're going to write
13	inflammatory response in a human?	13	on this.
14	A. I leave that to the doctors, the	14	BY MR. THOMAS:
15	surgeons, and so on, and the doctors. I'm not	15	Q. So why don't you draw a circle around,
16	a I'm a biochemist and a polymer chemist.	16	if you don't mind, those areas
17	Q. Right. So the extent to which any of	17	A. Circle?
18	these edges that you've described, cracks that	18	MR. ANDERSON: Listen to him.
19	you've described, or platelets or shards that	19	BY MR. THOMAS:
20	you've described are going to have any health	20	Q. Outline the area that you believe is
21	impact on any patient is for somebody else to	21	polypropylene.
22	comment on, is that fair?	22	A. (Witness complies).
23	A. The doctors have to do that, yes.	23	I'm having a hard time writing
24	Q. Thank you.	24	exactly, but you give my drift.
25	Let's go to Page 42 of your report,	25	BY MR. THOMAS:
	Page 147		Page 149
1	please.	1	Q. Doesn't have to be exact.
2	A. Got it.	2	A. Looks like a crack there.
3	Q. I'm interested in the figure that's on	3	Q. Okay.
4	the lower half of the page. I guess it's Figure	4	A. Something on that order.
5	48.	5	Q. And so thank you for doing that.
6	Based on your work in this case, what	6	You've drawn in red the area inside of
7	does Figure 48 show?	7	which is the polypropylene. Does the area
8	A. It shows a large this is atypical.	8	outside of that represent tissue or protein?
9	It shows a large longitudinal crack in the	9	A. I believe so.
10	underlying polypropylene coated by what appears	10	Q. Okay.
11	to be tissue.	11	A. It doesn't match you can see when
12	Q. Okay. Which parts I look at that	12	polypropylene cracks it gives these sharp sides
13	and I think of bark on a tree. And there's	13	and jagged edges, whereas this is more tissue
14	areas on either side, and then an interior that	14	is more nebulous.
15	I would think of as exposed wood on a tree and	15	Q. What is it about the polypropylene
16	the rest would be the bark, and I'm trying to	16	structure that causes it to crack in the manner
17	use it as kind of a descriptive thing.	17	you just described?
18	Is the area surrounding the interior	18	MR. ANDERSON: Objection to form.
19	portion that's not going to make any sense at	19	Go ahead.
20	all on the record, I understand that. Are we	20	A. It's developed brittleness from lack
21	talking about the same thing? Is that the	21	of antioxidants and oxidation and/or stress
22	tissue that's surrounding it?	22	cracking. The two work together in any given
23	A. Yes. This would be the polypropylene	23	sample.
	in home (indicating)	24	BY MR. THOMAS:
24 25	in here (indicating). Q. Let me give you a red pen. Why don't	25	Q. Will degradation alter the melting

38 (Pages 146 to 149)

	Page 150		Page 152
1	point of polypropylene?	1	BY MR. THOMAS:
2	A. Yes.	2	Q. We've got too many papers working
3	Q. Will degradation always alter the	3	here. I apologize.
4	melting point of polypropylene?	4	What is a plasticizer?
5	A. I think it depends on the severity of	5	A. It's generally a low molecular weight
6	the oxidation, the degradation.	6	material that's put inside of a plastic to make
7	Q. How much degradation or oxidation is	7	it more flexible.
8	required to alter the melting point of	8	Q. Do you agree that fat and body tissue
9	polypropylene?	9	will be a plasticizer on polypropylene?
10	A. Well, a lot of things affect the	10	A. Yes, not on, though, in. Only in. It
11	melting point of polypropylene. I'll show you.	11	has to get in.
12	This is again from one of the books in my	12	Q. What does that mean when the fat and
13	Turi, on thermal methods. Here's a chart, it	13	body tissue soften the polypropylene?
14	details polypropylene, and I've got melt points	14	A. It just becomes softer, because
15	all the way from 106 to 114 degrees to	15	that's connected with the environmental stress
16	•	16	
17	176 degrees, depending on the percent	17	cracking, that's going to get into the polymer
	crystallinity. Percent crystallinity affects		and start swelling the chains.
18	the melt point.	18	Q. Are you familiar with the concept
19	Q. Did you determine the melt point of	19	known as toughness?
20	the mesh that you analyzed in this project?	20	A. Yeah.
21	A. Yes.	21	Q. What is toughness?
22	Q. What did you determine the melt point	22	A. It's resistance to wear.
23	to be, do you remember?	23	Q. Is implanted mesh tougher than
24	A. I'd have to go to the table. There	24	pristine mesh?
25	were different values.	25	A. Not seen the measurements, so I don't
	Page 151		Page 153
1	Q. We'll get to that.	1	know.
2	You use a reference point in your	2	Q. Have you ever analyzed the question of
3	report of 175.	3	whether implanted mesh is tougher than pristine
4	A. That's for a typically crystalline	4	mesh?
5	polypropylene material.	5	A. No.
6	Q. The actual melting point of the	6	Q. What does it mean if implanted mesh is
7	polypropylene you analyzed was lower than that?	7	tougher than pristine mesh?
8	A. It was all lower, which tells me it	8	A. Well, it just means it might be
9	was after the manufacturing process it was	9	tougher in the sense of, I would use the term
10	like 165, I think, roughly, and then it went	10	I'm more like using the term rigid in this case,
11	down from there.	11	that would probably also be considered as part
12	Q. Okay.	12	of this tougher thing. But it also would make
13	A. It varies as a function of molecular	13	it if it's more rigid, it's going to make it
14	weight, it varies as a function of	14	more difficult to move in the body, and the
15	crystallinity.	15	patient will have more difficulty doing exercise
16	Do you want to keep this together? Do	16	and the like with that type of thing.
17	you know where the start is for this? This is	17	Q. If it's tougher
18	mine.	18	A. It's tougher
19	MR. ANDERSON: I think he flipped it	19	Q it's less resistant to be brittle
20	over, so we'll just have to figure it out.	20	and break, isn't it?
21		21	
22	THE WITNESS: I don't want to get us	22	A. Well, we also yes, but we also have
	all mixed up.		to consider based on our again, back to our
23	MR. ANDERSON: There we go.	23	SEM photographs, we also have to consider there
24 25	A. We've got it ready if we need it for something else.	24 25	appears to be two distinctive layers here, there's a surface layer which is cracking and

39 (Pages 150 to 153)

	Page 154		Page 156
1	there's an underlying layer which is has not	1	suggest that the stress cracking phenomenon is
2	yet cracked. So the bulk material could be	2	oriented along the extrusion lines?
3	tougher, while the surface layer is more	3	A. No. It doesn't say one way or the
4	brittle, at the same time.	4	other. It just says "stress cracking phenomenon
5	Q. Okay.	5	in oriented." She's just discussing oriented
6	A. So I don't know what to make of your	6	polypropylene. She doesn't say where the cracks
7	term because you're lumping it in the bulk, you	7	are.
8	know, as the entire fiber. And I'm looking at	8	Q. Okay. I understand. Go ahead.
9	two fibers, the surface region and then the	9	A. "Has been explained by their
10	underlying region, which is not cracked yet.	10	pronounced skin to core structure. This
11	Q. Just to be clear, they are both parts	11	bi-component structure is created by the
12	of the same fiber, aren't they?	12	differential cooling rates between the external
13	A. They almost look like two separate	13	and internal layers of the monofilaments." When
14	fibers.	14	it comes out of the dye, the surface cools
15	Q. Okay.	15	faster than the inner core. The faster cooling
16	A. And there's publications which	16	outer surface is going to be less crystalline
17	indicate the same.	17	than the inner core which stays warm longer, has
18	Q. Did you cite those papers in your	18	more time to form crystals as it's cooling. So
19	report?	19	you wind up with two structure types in the
20	A. Yes.	20	filament when you're done.
21	Q. Which papers are we talking about now?	21	Q. Are you suggesting by this testimony,
22	A. Well, let's see if I can find it for	22	Doctor, that it's only the outside of the
23	you quick. You'll have to bear were me while I	23	polypropylene mesh that's degrading, and the
24	find it.	24	inside is fine?
25	(Witness reviewing document.)	25	MR. ANDERSON: Objection.
	Page 155		Page 157
1	A. I've got it, I think. This is paper	1	Go ahead.
2	ASIO journal, 1998, Page 199, Mary Celine,	2	A. I'm not suggesting any such thing.
3	"Comparison of in vivo behavior of	3	I'm suggesting that the outer core is

5	sutures used in vascular surgery."	5	stress cracking susceptible, than the inner
6	She's discussing stress cracking at	6	part. The inner part would still be susceptible
7	this point. She says "The reason for stress	7	over time depending on the degree of
8	cracking phenomenon in oriented polypropylene	8	implantation in the body to oxidation.
9	monofilaments has been explained by their	9	We have two different things going on
10	pronounced skin/core structure." Those are two	10	at the same time, two layers. There are
11	phases I'm talking about.	11	actually two different kinds of polypropylene,
12	Q. Let me stop you there.	12	although that wasn't the intent in the
13	What is oriented polypropylene	13	manufacture I'm sure, but that's what you wind
14	monofilaments? What does that mean?	14	up with.
15	A. It means it's gone through the dye and	15	BY MR. THOMAS:
16	it's oriented longitudinally. We can see those	16	Q. Each of which will require a breakdown
17	lines where it's been pulled through the dye, or	17	in the polymer to degrade as described?
18	pushed.	18	A. Each of which
19	Q. Does that suggest a stress cracking	19	Q. Sorry.
20	phenomenon occurs through the extrusion lines?	20	Each of which would require a
21	A. Well, her purpose here is not to talk	21	breakdown in the polypropylene in order to
22	about that at the moment. It's talking about	22	degrade as described?
23	the bi-component structure.	23	A. Right. And the surface layer being
$\sim 4$	Q. I understand that.	24	less crystalline would also bleed out its
24 25	But as you read that, does that	25	antioxidants faster, it's more amorphous, and so

40 (Pages 154 to 157)

Page 158 Page 160 1 1 it's going to tend to degrade first. And that's temperature was raised in a heat cycle which is 2 2 what we invariably see in the SEMs, we see a listed in Table 4, heating conditions. First 3 3 heat we went from minus 90C to 200C at 10 surface cracking and removal. degrees C per minute. Then we cooled from 200 4 4 Q. In your analysis of these explanted 5 5 meshes, did you ever see a crack all the way back to minus 90 at 10 degrees C per minute. 6 6 through the mesh? And then we reheated a second heat from minus 90 7 7 to 210 degrees C per minute. A. I don't think we did. But I've read 8 about them in the literature, I just never saw 8 The first heating cycle looks at the 9 9 one in the 23 samples we ran, 24 with Batiste. form of the material as received. And then the 10 Q. Do you have any recollection -- strike 10 second heating cycle looks at the innate 11 11 material itself, heat history of the material 12 12 erased, so all the samples then go to what's Do you know the greatest crack that 13 13 you observed in any of the meshes that you called a common heat history. They may not all 14 14 reviewed? have a common heat history in the first heat 15 A. Do I --15 cycle, but, of course, that's the way they 16 16 actually are in the body so that's the most Q. Are you able to point to me the 17 biggest crack on any of the meshes and quantify 17 important one to look at is the Delta H and the 18 18 for me how much that crack is compared to the melting point, the first melting point in the 19 rest of the mesh? I don't want -- if you don't 19 first Delta H. 20 know it, I don't want you to go look. 20 Q. In Table 5, did you provide data for 21 21 A. There is a range, certainly. all of your explant samples? 22 22 A. Let's see. No, there's 15 samples, we Q. Can you quantify in measurement? 23 23 A. Standing here without looking at the had 23. So there were seven that weren't run. 24 pictures, no. 24 Q. Is there a reason why you didn't test 25 Q. Is there anything about the pictures 25 them all? Page 159 Page 161 1 that allows you -- strike that. 1 MR. ANDERSON: Objection. Asked and 2 Did you measure the cracks as a part 2 answered. 3 of your work in this case? 3 Go ahead. 4 A. No. Actually the entire surface was 4 A. I remember we didn't need to run all 5 cracked in many cases, so the entire surface 5 the samples to show the trends, number one. 6 б And number two, some of these cases would simply come off. 7 7 Q. Let's go to Page 60 of your report, there simply wasn't enough material to run. 8 8 BY MR. THOMAS: please. 9 This is the differential scanning 9 Q. Let's go to Page 66, please, the FTIR 10 calorimetry? microscopy. Let's talk about what FTIR 10 11 A. Calorimetry. 11 microscopy is. Tell me what that is, please. Q. Calorimetry. Thank you. We've talked 12 12 A. An FTIR microscope, FTIR instrument, 13 around this a lot today. 13 you radiate the sample with infrared radiation. 14 14 Would you tell me exactly what this is Each type of chemical bond in a molecule will 15 and what it measures? 15 absorb infrared radiation at a different wave A. DSC is a technique that -- where you 16 length. So when you run across a range of wave 16 17 put energy into a pan, against a standard pan in lengths, typically from 4,000 reciprocal 17 18 the other side, and you measure the rate of heat 18 centimeters to 5 or 600 reciprocal centimeters absorption or dissipation of a sample as the 19 19 you get a picture, a literal picture, to a 20 temperature rises or drops. You can both heat 20 chemist anyway, a picture of the bonds in the 21 21 and cool it. molecule that you're looking at. 22 Q. Okay. And tell me how you set out to 22 Q. Now, when you do FTIR analysis, do you 23 measure those things with the DSC methodology? 23 generally have a reference against which to 24 A. Well, a portion of the sample was put 24 measure what you find to match up? 25 25 into the tube, into the sample pan, and then the A. That's always run with references. We

41 (Pages 158 to 161)

Page 162 Page 164 1 1 always run -- to make sure the instrument is don't match I know I've got a problem, and I 2 2 stop and fix it, we don't continue. running fine, usually a polystyrene standard is 3 run to make sure all the bands come out where 3 Q. Believe it or not, I think we're 4 4 they should come out. And then CO2 is removed saying the same thing. 5 with a nitrogen purge so you don't have an 5 A. Hopefully so. 6 6 artificial CO2 peak. That's SOP. That's all in Q. I don't use the same words you do. 7 7 A. If you'd like to see the standard, the SOP. 8 Q. Okay. Do you then have a 8 I've got in my book over there. I'll be glad to 9 9 polypropylene reference point against which to show it to you. 10 compare your findings that you shoot here to see 10 Q. Which standard did you use, the 11 11 how they match up? Sadtler? 12 A. Well, we have polystyrene --12 A. The Sadtler. 13 13 polypropylene reference spectra, so -- and we Q. I don't need to see it. 14 run the standard polypropylene mesh, which is, 14 Do you call that a standard? What's 15 in fact, pure polypropylene. So we compare 15 the technical term for that? 16 16 A. No, I call it a check. It is a type 17 Number one, the polystyrene shows the 17 of -- it's part of our SOP. But the standard is instrument is behaving good, up to standard, and 18 18 the polystyrene, it's always run. 19 then the polypropylene is run, it's compared to 19 Q. The Sadtler reference that you talked 20 a known polypropylene spectrum. So if we were 20 about --21 21 to run the mesh and the peaks looked funny we A. Is polypropylene. 22 22 would have caught that. Although that's never Q. And it would be the same sort of 23 happened, because if the polystyrene standard 23 spectrum that appears on Page 67 of your report? 24 comes out right, it's telling you the machine is 24 A. Exactly. 25 working normally. 25 Q. And you would measure the Sadtler Page 165 Page 163 standard for polypropylene against what you find 1 But even if it did for some crazy 1 2 reason, between the time we ran the standard and 2 to see if it matches what you find? 3 the time we ran the polypropylene, we'd 3 A. That's right. In other words, for 4 immediately flag it because we have 4 isotactic polypropylene, which is what Prolene 5 polypropylene standard spectra around. 5 is, we have 841, 973, 997, and 1166 bands, those 6 6 Q. Is the goal of running the FTIR to are the isotactic bands. It's a fingerprint, we 7 7 determine the extent to which what you're call it, of polypropylene, and particularly of 8 8 testing matches up against what you're looking isotactic polypropylene. 9 for; that is, particularly here that you're 9 Q. Do you know of any polypropylene 10 testing the explanted mesh to determine the 10 standards that have a spectra for oxidized 11 extent to which it's consistent with the 11 polypropylene? 12 MR. ANDERSON: Objection. 12 polypropylene that's supposed to be in the mesh? 13 A. Yes. 13 Go ahead. 14 Q. And there are standards against which 14 A. I've seen them. 15 you measure what your findings are? 15 BY MR. THOMAS: A. Correct. 16 Q. Did you attempt to -- where did you 16 17 17 Q. And there will be a standard -- there see them? 18 are a number of different companies that make 18 A. The Sadtler Library. There's a 19 chapter on polypropylenes, and some of them are 19 standard polypropylene spectra against which you 20 could measure your findings? 20 oxidized and some aren't. 21 21 A. Yes. But we don't need that because Q. Okay. Have you read about FTIR 22 we use the spectra, or the known spectra from 22 spectra for oxidized polypropylene? 23 like Sadtler Library of spectra, I will simply 23 A. I've just seen them in the Sadtler 24 look up what I'm getting versus a known 24 Library. 25 25 standard, and those two have to match. If they Q. Did you consider utilizing spectra for

42 (Pages 162 to 165)

	Page 166		Page 168
1	oxidized polypropylene when you conducted your	1	correct?
2	FTIR analysis in Lewis and Batiste?	2	MR. ANDERSON: Objection. Form.
3	A. No. I used more of the literature,	3	Go ahead.
4	the Clavés, the Ostergards, and Wood, the	4	A. I certainly could have used those. I
5	current Wood paper and others. They all run	5	don't see it makes any difference. I'm using
6	infrared of polypropylene.	6	published literature, recent published
7	Q. Why didn't you use the standards which	7	literature here, so I feel very safe. I mean I
8	have oxidized polypropylene against which to	8	could have used the Sadtler Library, sure.
9	measure your findings?	9	BY MR. THOMAS:
10	A. Well, those were those were bulk	10	Q. Well, if the Sadtler Library gave you
11	polypropylenes, this is fiber. So I didn't	11	a different result, you'd be concerned, wouldn't
12	really have any fiber standard spectra to use	12	you?
13	anyway. So I guess I could have used them,	13	•
14	wouldn't have hurt, wouldn't have made any	14	A. But it's not going to. I'm confident sitting here it's not going to give me a
15	difference, I don't think.	15	different result. I'll go get the spectra and
16		16	9 9 1
17	Q. Why not?	17	show you, glad to.
18	A. Because I already had them from the other literature.	18	Q. The range of absorption regions identified by you as being indicative of
19		19	
20	Q. But you are measuring something	20	oxidation are 1730 to 1680, is that correct?
21	different with oxidized polypropylene than you	21	A. Right. That would include acids
22	are with regular polypropylene by your own	22	around 1700, ketones around 16 1710, 15, and
23	definition, correct?	23	then aldehydes around 1730, esters around 1740.
24	A. Right. As shown in the literature I	24	Q. Do you have anything did you find
25	already have.	25	anything in your FTIR analysis of evidence of
25	Q. The literature you're talking about is	23	oxidation in the range of 1730 to 1680?
	Page 167		Page 169
1	Clavé?	1	A. It was covered up by the protein that
2	A. Yeah, Clavé and there's others. Wood	2	was in the coating, or part of I guess you
3	is another one, that's 2013.	3	could say coating the fiber pieces.
4	Q. Is that contained in your report?	4	Q. So is the answer no?
5	MR. ANDERSON: Yes.	5	A. The answer is no.
6	A. I think so.	6	Q. Now, when you run these FTIR samples,
7	BY MR. THOMAS:	7	you set the machine, the machine reads it, and
8	Q. May I see that, please?	l 8	
а	- 1	_	then the machine is what identifies those areas

Yes, that's part of the paper.	9 10 11 12 13 14 15 16 17 18 19 20 21 22	that are significant and calls them out with numbers, is that right?  A. The frequencies of each band, yes, the machine calls out, yes.  Q. The frequencies of each band?  A. Yes.  Q. So the numbers that appear, for example, on Page 69, along with the spectra there, those numbers are placed there by the machine based upon your calibration of the machine about what's significant. Is that fair?  A. Well, it's simply identifying the machine identifies the peaks and labels the numbers. I have to interpret what it means.

43 (Pages 166 to 169)

Page 170 Page 172 Q. Okay. On Page 69, you've identified 1 1 liquid or gas, in the case of polypropylene, and 2 2 this area at 1757 as being significant, is that then as they monitor units, fuse together, the 3 3 right? chains become longer and longer, and then you 4 4 A. Right. There's also another region have eventually a polymer -- generally the start 5 5 I'd like to mention, it's a little bit subtle, of what we call a polymers around, it's a bit of 6 6 is that shoulder that's at the base of the 1656 a range, but we generally consider anything 7 7 peak, towards the left side of it, that would be above 2000-ish molecular weight of daltons to be 8 the 1740. The machine didn't pull it out 8 a polymer, albeit a very low molecular weight 9 9 because there's not a baseline, not a valley in polymer. Most commercial polymers are hundreds 10 there for it to see. The machine requires a 10 of thousands to millions. 11 Q. Of what significance to molecular 11 valley to see. But the human eye can see it. 12 12 Q. I see. weight is a breakdown of the polypropylene 13 polymer, a change in the polypropylene polymer, 13 So that shoulder is something --14 14 A. That's the 1740. will it change the molecular weight? 15 Q. -- that the machine didn't find, but 15 MR. ANDERSON: Objection to form. 16 16 you find? Go ahead. 17 17 A. I'm sorry, can I rehear it again? A. Right. The human brain can still be a 18 18 machine occasionally. BY MR. THOMAS: 19 Q. I see. 19 Q. The polypropylene polymer is broken, 20 A. And if I had taken this sample and 20 the chain is broken. 21 21 treated it with sodium hypochlorite, for A. Okay. 22 22 example, then we would have gotten rid of the Q. Will that change the molecular weight? 2.3 23 1656 and the 1541 bands, which are the protein A. It will lower it. 24 bands, because we have destroyed the protein or 24 Q. Page 80. After doing your analysis, 25 the biofilm that was part of the particle or 25 you conclude in your scientific opinion that Page 171 Page 173 1 1 coating the particle, the bulk of which was "The control and explant samples do not show a 2 polypropylene. And then I would have seen only 2 significant difference in molecular weight." 3 polypropylene, what's left. 3 Correct? 4 This figure that's shown here 4 A. That's correct. 5 5 represents -- keep in mind the carbonyl bands Q. Doesn't that mean that there's no б are much stronger than alkyl bands. So the fact б evidence in your molecular weight analysis that 7 7 that they're roughly the same size suggests to polypropylene is degrading? 8 8 me that this material, as I'm looking at it A. It might seem so at first 9 here, is about 75 percent polypropylene and 9 consideration. But remember, the only part of 10 25 percent protein, thereabouts, plus or minus a 10 the polymer that seems to be degrading based on 11 little. And it's oxidized, because I have the 11 the SEM photos is the surface. 1740 and the 1757. And there may be a 1730 and 12 So GPC is a bulk technique, I had to 12 13 a 1715 that I can't see because it's buried 13 dissolve the inside undamaged region as well as 14 14 under the 1656 band, which I could see if in the the broken pieces, but I get one sample. The 15 future we choose to do any more -- like sodium 15 total mixture dissolved. 16 So number one, the effect of the 16 hypochlorite. 17 Q. Page 72. "Molecular weight is often a damaged surface -- my point here is I think if 17 18 crucial factor in determining material 18 we could measure the surface we would see a loss 19 19 properties." in molecular weight, but I had no way to get 20 Did I read that correctly? 20 enough pieces to measure the molecular weight of 21 21 A. Yes, you do. only the surface pieces like I did for the 22 Q. What is molecular weight? 22 infrared spectra. 23 A. It's really a measure of the number of 23 Q. Aren't you speculating what you find? 24 repeat units in a given polymer molecule. 24 A. I am. 25 25 Monomer is the starting material, usually a Q. Until you have the opportunity to test

44 (Pages 170 to 173)

	Page 174		Page 176
1	as you've described, the fact that your	1	he knows it is an inappropriate form of a
	molecular weight testing does not show a	2	question.
	significant difference in molecular weight	3	MR. THOMAS: Okay.
	suggests that there's no degradation of the	4	MR. ANDERSON: If you think somebody
	polypropylene. That's the best scientific	5	from Jordi Labs testified there, then I think
	conclusion you can reach in this data, isn't	6	that would differ from reality.
	that true?	7	MR. THOMAS: I wasn't talking about
8	A. It's one of the conclusions, yes.	8	Jordi Labs testifying.
9	Q. It's	9	MR. ANDERSON: That's what it says.
10	A. It's not the only one.	10	MR. THOMAS: Got you.
11	Q. It's fair to say okay.	11	BY MR. THOMAS:
12	Now, has Jordi Labs analyzed	12	Q. Dr. Jordi, are you aware that Jordi
	polypropylene mesh for other manufacturers?	13	Labs conducted analysis on Bard mesh for use by
14	A. I don't run the day-to-day operations	14	the Plaintiffs in the Bard mesh litigation?
	anymore, so I would have no way to answer that	15	MR. ANDERSON: Objection. Asked and
	question. I don't know what has come in.	16	answered.
17	Q. Do you know?	17	A. I am not.
18	A. I do not know.	18	BY MR. THOMAS:
19	Q. Do you know whether Jordi Labs	19	Q. If Jordi Labs had analyzed
	analyzed Bard mesh that was at issue in the West	20	polypropylene mesh used for pelvic floor
	Virginia litigation?	21	implants and found a loss of molecular weight in
22	A. I don't know.	22	that mesh, would that be relevant to your
23	Q. Do you know whether Bard mesh has	23	opinions in this case?
	antioxidants in it?	24	MR. ANDERSON: Objection.
25	A. I haven't been requested to analyze,	25	Go ahead.
	Page 175		Page 177
1	so I don't know.	1	A. I don't have enough information from
2	Q. Do you know whether Bard mesh loses	2	just that question to answer it. I'd have to
	its molecular weight upon testing?	3	know what the antioxidants were, what the levels
4	A. I haven't seen the Bard mesh, so no.	4	were, and so on.
5	Q. You've not seen the work that Jordi	5	BY MR. THOMAS:
	Labs did for Plaintiffs in the Bard litigation	6	Q. Okay. Are you suggesting by your
	where they where Jordi Labs, your company,	7	testimony in this case that the polypropylene in
	testified the Bard mesh without antioxidants had	8	the Ethicon mesh depolymerizes?
	showed a loss in molecular weight, is that true?	9	A. In the Ethicon mesh?
10	MR. ANDERSON: Objection to form.	10	Q. Yes.
	Assumes facts not in evidence.	11	A. It obviously hasn't depolymerized if
12	A. Say again?	12	the molecular weight is the same.
	BY MR. THOMAS:	13	Q. So you're not testifying that it's
14	Q. You've not seen the work that Jordi	14	depolymerized?
	Labs did for Plaintiffs in the Bard litigation	15	MR. ANDERSON: Objection.
	where they, where Jordi Labs, your company,	16	A. No. What I think is going on is two
16			· · · · · · · · · · · · · · · · ·
		17	effects. I think we have an oxidative
17	testified the Bard mesh without antioxidants	17 18	effects. I think we have an oxidative phenomenon, which I can show you in my report
17 18	testified the Bard mesh without antioxidants showed a loss in molecular weight?	18	phenomenon, which I can show you in my report
17 18 19	testified the Bard mesh without antioxidants showed a loss in molecular weight?  MR. ANDERSON: Same objections.	18 19	phenomenon, which I can show you in my report I have the report in here somewhere. I can find

45 (Pages 174 to 177)

	Page 178		Page 180
1	molecular weight initially. It's degradation,	1	7846, amount of \$5,000.
2	but it's actually going to increase the	2	Invoice number 7881 on September 11,
3	molecular weight. At the same time we've got	3	2013, in the amount of \$100,418.74.
4	beta scission going on, which is decreasing	4	Invoice number 7882 dated
5	molecular weight. And initially the two effects	5	September 11, 2013, in the amount of \$13,980.42.
6	can more or less cancel out, and you don't see a	6	Invoice 7883, dated September 11,
7	net change.	7	2013, in the amount of \$203,470.
8	Eventually yes, it will depolymerize,	8	Invoice number 7918 dated
9	but apparently this material hasn't gone that	9	September 23rd, 2013, in the amount of \$45,375.
10	far.	10	Invoice number 7882 dated
11	BY MR. THOMAS:	11	September 11, 2013, in the amount of \$13,980.42.
12	Q. It's the same across every sample that	12	Invoice number 7884 dated
13	you tested?	13	September 11, 2013, in the amount of \$6,122.94.
14	A. Yes, in this case, in this particular	14	Invoice number 7984 dated October
15	set of samples it was.	15	the 10th, 2013, in the amount of \$28,130.
16	Q. And it's the same with the Burkley	16	And invoice number 8035 dated
17	seven year dog study?	17	October 28, 2013, in the amount of \$28,876.05.
18	A. Yes. That's what Dan Burkley said,	18	To the best of your knowledge, is that
19	yes.	19	the total of the billing that you've made in
20	Q. Every time you've tested the molecular	20	connection with your work in this case?
21	weight of Ethicon's mesh or gone back and	21	A. To this point, yes. There's no other
22	retested the molecular weight of Ethicon's mesh,	22	bills. I'm sure there will be another one
23	the molecular weight hasn't changed in a	23	coming.
24	significant manner?	24	Q. Obviously in your work in this case
25	A. No, we don't see it it's true, we	25	you've analyzed a number of different explant
	Page 179		Page 181
1	do not see a	1	samples?
2	Q. As a matter of fact, there's never	2	A. Correct. 23; 24 with Batiste.
3	been a time where you've analyzed Ethicon mesh	3	Q. Are you able to tell from these
4	used in these TVT products that shows a change	4	invoices the extent to which your work has
	in molecular weight?	5	focused on the Carolyn Lewis case, or is all of
6	MR. ANDERSON: Objection. Asked and	6	this for the Carolyn Lewis case?
7	answered.	7	MR. ANDERSON: I'm not sure I
8	But answer it again.	8	understand the question. It could be more legal
9	A. That's true. That's correct.	9	in nature, so due to that I will object.
10	BY MR. THOMAS:	10	BY MR. THOMAS:
11	Q. Dr. Jordi, during lunch I was provided	11	Q. Are you able to look at these bills
12	with invoices from your office to Mr. Anderson.	12	and tell me the extent to which you worked on
13	I'll read these into the record, if you don't	13	the Lewis specific matter, for example, perhaps
14	mind.	14	the time when you received the Lewis explant
15	A. That's fine.	15	separate and apart from the others that you
16	Q. Do you want me to do it so you can see	16	analyzed, and determine the cost that you
17	so I do it right?	17	incurred in analyzing the Lewis explant? I
18	MR. ANDERSON: What are you trying to	18	don't know if you can or not.
	point out, just amounts?	19	MR. ANDERSON: I'm just going to
20	MR. THOMAS: Just the dates and	20	object to the form, because I think you've mixed
21	amounts.	21	two different things. One is you're asking how
	BY MR. THOMAS:	22	much of the work was case specific, and he's a
23	Q. On August the 12th, 2013, invoice	23	general expert as well as looking at the
24 25	7783, for \$11,250. August the 28th, 2013, invoice number	24 25	specific explant of Ms. Lewis.  So if you want us to look at the bill

46 (Pages 178 to 181)

	Page 182		Page 184
1	and see just how much the cost was of the	1	there next to it. That would be the 1740.
2	testing and the analysis for just Lewis, we will	2	Q. Let's go one at a time.
3	try to do that. But to mix that up and to say	3	The first one you said a minute ago,
4	how much of the cost related to just Ms. Lewis,	4	the carbonyl band where?
5	as you know at the trial he's going to be	5	A. Around 1759. Some of these, there's
6	talking about all of these things.	6	no valley there, so the machine didn't actually
7	So I just want to make sure we're on	7	label it. If you go to the next page, 72, it's
8	the same page and that's clear, because your	8	very similar, you'll see there it does have a
9	question was not.	9	slight valley, so the machine calls it 1761. I
10	MR. THOMAS: Thank you. I thought my	10	think we showed another one that was 1757. It's
11	question was clear, but that's good.	11	in that region, all of them.
12	BY MR. THOMAS:	12	Q. Is there any discussion in your report
13	Q. Can you tell me the extent to which	13	anywhere, specifically text, about your findings
14	MR. ANDERSON: We agree to disagree.	14	with respect to Carolyn Lewis?
15	MR. THOMAS: I understand. I'm going	15	MR. ANDERSON: You mean in one place?
16	to try to ask the question better now.	16	MR. THOMAS: Anywhere.
17	BY MR. THOMAS:	17	BY MR. THOMAS:
18	Q. Can you look at these invoices,	18	Q. About "this is what I find wrong with
19	Dr. Jordi, and tell me about the Lewis specific	19	Carolyn Lewis based on this analysis."
20	analysis that you did, and the cost of that?	20	MR. ANDERSON: He's pointing to one
21	MR. ANDERSON: We'd have to get more	21	right now. I don't understand.
22	material to be able to do that. We tried to	22	MR. THOMAS: I understand that, Ben.
23	bring everything in here to be able to do that,	23	BY MR. THOMAS:
24	we've got lab notebooks to when those days would	24	Q. Do you explain anywhere
25	be as opposed to the billing. The problem is	25	A. I explain the principles in the
	Page 183		Page 185
1	the billing is through a time period, so we'd	1	conclusions. It applies to all the explanted
2	have to try to look and match up the time period	2	samples, including Carolyn Lewis, but not
3	in the lab notebook to when it was received with	3	specifically Carolyn Lewis.
4	the time period on the invoice. We're happy to	4	Q. Okay. So there are no specific
5	take the time to try to do that.	5	opinions in your report that relate to Carolyn
6	MR. THOMAS: I'd like to use my time	6	Lewis, is that fair?
7	better than that.	7	MR. ANDERSON: Objection to form.
8	I'm going to mark these invoices	8	THE WITNESS: Answer?
9	collectively as Exhibit Number 5.	9	MR. ANDERSON: You can answer.
10	MR. ANDERSON: Sure.	10	A. Not that I no.
11	(Whereupon, Jordi Exhibit Number 5,	11	BY MR. THOMAS:
12	Group of invoices from Jordi Labs, was	12	Q. Okay. So it's correct that there are
13	marked for identification.)	13	no specific opinions to Carolyn Lewis in your
14	BY MR. THOMAS:	14	report, correct?
15	Q. Dr. Jordi, what are your opinions with	15	MR. ANDERSON: Objection.
16	respect to the mesh explant of Carolyn Lewis?	16	A. Well, there are.
17	If you're going to your report, tell me where	17	MR. ANDERSON: That's unfair.
18	you're going, please.	18	Go ahead.
1 1 0	A. As soon as I get there and find	19	A. There are, because it's the photos.
19			
20	something, I will.	20	You want it text, but it's in the presence of
20 21	something, I will.  Page 71. So that's the infrared, one	21	the printed results.
20 21 22	something, I will.  Page 71. So that's the infrared, one of the shards from Carolyn Lewis. Sample 13674	21 22	the printed results. BY MR. THOMAS:
20 21 22 23	something, I will.  Page 71. So that's the infrared, one of the shards from Carolyn Lewis. Sample 13674 showing carbonyl band highlighted there in	21 22 23	the printed results. BY MR. THOMAS: Q. Okay. But you don't describe anywhere
20 21 22	something, I will.  Page 71. So that's the infrared, one of the shards from Carolyn Lewis. Sample 13674	21 22	the printed results. BY MR. THOMAS:

47 (Pages 182 to 185)

	Page 186		Page 188
1	A. I describe in general what all these	1	Carolyn Lewis mesh?
2	figures like this mean. So if it's a carbonyl	2	A. The cracking.
3	for Carolyn Lewis, or it's a carbonyl for any of	3	Q. That's the perpendicular cracking?
4	the other explants, it's the same meaning.	4	A. The perpendicular cracking. And then
5	Q. I see.	5	we also have a parallel flaking which you can
6	So when you point out this shoulder on	6	see at the top, at the bend where it goes
7	Page 71 in Figure 81 that's not marked in any	7	particles getting ready to come off. And
8	way, that's something that you see on the	8	there's also tissue on top of that.
9	drawing, that you're the one who identifies that	9	Q. Now, is this the portion of the mesh
10	and can only testify to that because you can see	10	that you tested with FTIR analysis?
11		11	A. It is not.
12	it; fair?	12	Q. Okay.
13	MR. ANDERSON: Objection to the form	13	= •
14	of the question.	14	A. Remember, we didn't want to cause any
15	Go ahead.		stress or strain on these meshes, so we simply
	A. Well, due to my experience reading	15	sent it imbedded in tissue. For the IR you must
16	FTIRs, yes, I can see it. Anyone else with	16	remove the tissue in order to get the spectrum.
17	equivalent experience would see it, too.	17	Q. Okay. What else do you have for
18	BY MR. THOMAS:	18	Carolyn Lewis?
19	Q. Well, I'm lawyer and a history major,	19	A. Okay. SEM-EDX, let's find that chart.
20	would you expect me to be able to figure that	20	58, Page 58.
21	out?	21	Q. On Figure 71, you have is that a
22	MR. ANDERSON: No comment.	22	different image still than the one that was on
23	A. No comment.	23	48?
24	BY MR. THOMAS:	24	A. Yeah. It is, yes.
25	Q. Okay. Certainly not apparent to	25	Q. All right. And the J8041 means what?
	Page 187		Page 189

And so you'll see you have a peak, a fairly large peak for oxygen, a huge peak for carbon, sodium, aluminum which is just a sample pan that doesn't mean anything, phosphorus and sulfur are at fairly large peaks on this region of the spectrum. Now, that's the cracked region, and has a large amount of oxygen. But we also

48 (Pages 186 to 189)

	Page 190		Page 192
1	_	1	or sulphur. That is the increased oxygen that I
1 2	sulfur levels. So that could mean phosphate and sulfate which also contain oxygen, so the	1   2	call oxidation.
3	increased oxygen in that region could have been	3	Q. Okay. Again, so Spectrum 3 is meant
4	from buffers as well as just literally the	4	to be testing the oxidized polypropylene,
5	oxidation type oxygen.	5	correct?
6	So you want to go to region of the	6	A. Right. That's why we ran it there
7	polymer that wasn't cracked, there's Spectrum 4.	7	first.
8	And that is the red one. It's hard to read in	8	Q. Spectrum 4 is designed to testify
9	the picture but it's the red is Spectrum 4.	9	excuse me.
10	Now you see you still see an oxygen peak,	10	Spectrum 4 is designed to test what
11	although it's lower in the Spectrum 3, but now	11	you believe to be clean polypropylene?
12	the sodium is almost totally gone, and the	12	A. Let's phrase it this way.
13	phosphorus and sulfur are basically gone	13	Not yet degraded. Not yet cracked.
14	completely.	14	But I didn't know whether if it has increased
15	So what this is telling me is even in	15	oxygen in it, that means it's on its way to
16	the non-cracked region, I have a higher than	16	cracking.
17	baseline level of oxygen. If you want to see	17	What I believe is happening is layer
18	that in another	18	after layer after layer of this stuff is going
19	Q. Before you do that, may I ask you	19	to crack depending on the implantation time.
20	another question?	20	The first layer is going to go quickest because
21	A. Sure.	21	it's remember the outer layer is less
22	Q. I don't want to interrupt you.	22	crystalline, remember the paper I showed you
23	A. Go ahead.	23	earlier, and so it's going to go first. And
24	Q. Spectrum 4 shown in red, are you	24	when it peels off, as some of it's flaked off
25	suggesting that what you're testing in Spectrum	25	here, then we expose more underlying fresh
	Page 191		Page 193
1	4 is pure polypropylene?	1	surface, which then begins to itself oxidize as
2	A. Yes.	2	reflected in the increased oxygen even in that
3	Q. Okay. Without any kind of	3	region, which is the red peak for oxygen.
4	contamination at all?	4	Q. What is Spectrum 2?
5	A. We got away from the you can see	5	A. We just didn't show it.
6	this white material here, which would be the	6	Q. Did you run the data?
7	polypropylene which would be tissue.	7	A. Yeah, I could show it. I could get
8	Q. Okay.	8	it. I don't have it with me.
9	A. Which you might call biofilm. We'll	9	Q. It's not in your report?
10	have to agree to disagree or agree to agree and	10	A. It might be. Do you want to see if I
11	use both terms interchangeably. So I wanted to	11	can find it?
12	get away from that as much as possible, so we	12	Q. Just curious, yes.
13	ran a cleaner spectra cleaner region that	13	A. Glad to try. If we don't have it, we
14	didn't have cracks in it.	14	certainly can get it.
15	Now, when I look at this, I see this	15	Q. It won't be in the controls, will it?
16	cracked material in many places is flaked off.	16	A. That doesn't mean anything, because
17	You can see the edge over here on the right	17	I've got this is LCMS. It's not in exact.
18	where the piece has actually come off and it's	18	Here we go. Now I've got
19	gone. You can see the edge where it was. And	19	(Witness reviewing document.)
20	the same is true on the other side. But on this	20	MR. ANDERSON: We'll go off the record
21	left side of it, it's clean. And then left of	21	while we're looking. Is that okay with you,
22	it up there's really nothing but straight	22	Dave?
23	pretty much straight clean-ish polypropylene.	23	MR. THOMAS: Yes.
24	So we ran a spectrum of that, and we still saw increased oxygen. But no increased phosphorus	24 25	(Off the record discussion.) (Whereupon, a recess was taken from
25			

49 (Pages 190 to 193)

	Page 194		Page 196	;
1	2:47 p.m. to 2:53 p.m.)	1	bottom of Table 5 for sample ID number 13674.	ı
2	A. He's got a box on the Spectrum 2 so	2	A. Correct. So and now we compare	
3	I'm almost sure it's run, so we'll just have	3	that with the first heat effusion for the	
4	if you want that spectrum, I don't see it in	4	control samples, you can see that they range	
5	the number one, the reason it's not there is	5	from 93, 79, 82, 86. Table 7 probably says it	
6	because it's also on a cracked region just like	6	best. We do for the samples, we had a couple	
7	Spectrum 3 is, so what it's going to look like	7	samples that didn't show any cracking on the	
8	is the higher the one in yellow, it's just a	8	average of FLP for those samples was 86.6	
9	duplicate of the one in yellow.	9	kilograms per gram or joules per gram, sorry.	
10	BŶ MR. THOMAS:	10	And moderate cracking at 81.2, and highly	
11	Q. I understand, Doctor. So for reasons	11	cracked at 75.1. And here we're at 69.77, so	
12	I'm sure you understand, I'd like to have a copy	12	we're in that highly cracked region in terms of	
13	of it.	13	this measurement.	
14	MR. ANDERSON: Yes.	14	Q. Does this DSC testing that you did,	
15	BY MR. THOMAS:	15	which you used to suggest that this is evidence	
16	Q. Just so the record is clear, you've	16	of oxidation, does this also capture the extent	
17	searched your files that you brought with you	17	to which there are any impurities in the sample?	
18	A. I can't find it.	18	A. I would say, number one, it doesn't	
19	Q and you're unable to find the	19	necessarily correlate with oxidation, although	
20	Spectrum 2 data that appears on Page 58 of	20	it could. But it also correlates with possible	
21	Exhibit 1?	21	stress cracking.	
22	MR. ANDERSON: Is that correct?	22	Q. Okay.	
23	A. That's correct.	23	A. Because there's less crystallinity.	
24	BY MR. THOMAS:	24	Q. Let me ask this question again.	
25	Q. Thank you.	25	You are using this DSC data to suggest	
	Page 195			
	rage 193		Page 197	,
1	Okay. We were talking about evidence	1	that the lower melting point reflects either	,
2	Okay. We were talking about evidence that you had specific to Carolyn Lewis.	2	that the lower melting point reflects either oxidation or stress environmental stress	,
	Okay. We were talking about evidence that you had specific to Carolyn Lewis.  A. So the net result here is that we have		that the lower melting point reflects either oxidation or stress environmental stress cracking. Does it also capture any impurities	,
2 3 4	Okay. We were talking about evidence that you had specific to Carolyn Lewis.  A. So the net result here is that we have oxygen in the clean looking, undegraded looking	2 3 4	that the lower melting point reflects either oxidation or stress environmental stress cracking. Does it also capture any impurities that may have been in the sample?	7
2 3 4 5	Okay. We were talking about evidence that you had specific to Carolyn Lewis.  A. So the net result here is that we have oxygen in the clean looking, undegraded looking region of the fiber that's under the cracked	2 3 4 5	that the lower melting point reflects either oxidation or stress environmental stress cracking. Does it also capture any impurities that may have been in the sample?  A. If there were impurities in the	,
2 3 4 5 6	Okay. We were talking about evidence that you had specific to Carolyn Lewis.  A. So the net result here is that we have oxygen in the clean looking, undegraded looking region of the fiber that's under the cracked region suggesting that it's beginning to oxidize	2 3 4 5 6	that the lower melting point reflects either oxidation or stress environmental stress cracking. Does it also capture any impurities that may have been in the sample?  A. If there were impurities in the sample, they would also tend to lower the melt	7
2 3 4 5 6 7	Okay. We were talking about evidence that you had specific to Carolyn Lewis.  A. So the net result here is that we have oxygen in the clean looking, undegraded looking region of the fiber that's under the cracked region suggesting that it's beginning to oxidize as well, but it's not enough yet that it's	2 3 4 5 6 7	that the lower melting point reflects either oxidation or stress environmental stress cracking. Does it also capture any impurities that may have been in the sample?  A. If there were impurities in the sample, they would also tend to lower the melt point.	7
2 3 4 5 6 7 8	Okay. We were talking about evidence that you had specific to Carolyn Lewis.  A. So the net result here is that we have oxygen in the clean looking, undegraded looking region of the fiber that's under the cracked region suggesting that it's beginning to oxidize as well, but it's not enough yet that it's actually cracked.	2 3 4 5 6 7 8	that the lower melting point reflects either oxidation or stress environmental stress cracking. Does it also capture any impurities that may have been in the sample?  A. If there were impurities in the sample, they would also tend to lower the melt point.  Q. Okay. Are you able to tell from this	7
2 3 4 5 6 7 8 9	Okay. We were talking about evidence that you had specific to Carolyn Lewis.  A. So the net result here is that we have oxygen in the clean looking, undegraded looking region of the fiber that's under the cracked region suggesting that it's beginning to oxidize as well, but it's not enough yet that it's actually cracked.  Q. Okay.	2 3 4 5 6 7 8 9	that the lower melting point reflects either oxidation or stress environmental stress cracking. Does it also capture any impurities that may have been in the sample?  A. If there were impurities in the sample, they would also tend to lower the melt point.  Q. Okay. Are you able to tell from this DSC testing the extent to which the values	7
2 3 4 5 6 7 8 9	Okay. We were talking about evidence that you had specific to Carolyn Lewis.  A. So the net result here is that we have oxygen in the clean looking, undegraded looking region of the fiber that's under the cracked region suggesting that it's beginning to oxidize as well, but it's not enough yet that it's actually cracked.  Q. Okay.  A. So we'll go to DSC.	2 3 4 5 6 7 8 9	that the lower melting point reflects either oxidation or stress environmental stress cracking. Does it also capture any impurities that may have been in the sample?  A. If there were impurities in the sample, they would also tend to lower the melt point.  Q. Okay. Are you able to tell from this DSC testing the extent to which the values reflect oxidation, environmental stress	7
2 3 4 5 6 7 8 9 10	Okay. We were talking about evidence that you had specific to Carolyn Lewis.  A. So the net result here is that we have oxygen in the clean looking, undegraded looking region of the fiber that's under the cracked region suggesting that it's beginning to oxidize as well, but it's not enough yet that it's actually cracked.  Q. Okay.  A. So we'll go to DSC.  Okay. So the first thing you do is	2 3 4 5 6 7 8 9 10	that the lower melting point reflects either oxidation or stress environmental stress cracking. Does it also capture any impurities that may have been in the sample?  A. If there were impurities in the sample, they would also tend to lower the melt point.  Q. Okay. Are you able to tell from this DSC testing the extent to which the values reflect oxidation, environmental stress cracking, as opposed to impurities?	7
2 3 4 5 6 7 8 9 10 11 12	Okay. We were talking about evidence that you had specific to Carolyn Lewis.  A. So the net result here is that we have oxygen in the clean looking, undegraded looking region of the fiber that's under the cracked region suggesting that it's beginning to oxidize as well, but it's not enough yet that it's actually cracked.  Q. Okay.  A. So we'll go to DSC.  Okay. So the first thing you do is look at Table 5, then look at the heat effusion.	2 3 4 5 6 7 8 9 10 11 12	that the lower melting point reflects either oxidation or stress environmental stress cracking. Does it also capture any impurities that may have been in the sample?  A. If there were impurities in the sample, they would also tend to lower the melt point.  Q. Okay. Are you able to tell from this DSC testing the extent to which the values reflect oxidation, environmental stress cracking, as opposed to impurities?  A. No.	7
2 3 4 5 6 7 8 9 10 11 12 13	Okay. We were talking about evidence that you had specific to Carolyn Lewis.  A. So the net result here is that we have oxygen in the clean looking, undegraded looking region of the fiber that's under the cracked region suggesting that it's beginning to oxidize as well, but it's not enough yet that it's actually cracked.  Q. Okay.  A. So we'll go to DSC.  Okay. So the first thing you do is look at Table 5, then look at the heat effusion.  First heat is 69.77 joules per gram.	2 3 4 5 6 7 8 9 10 11 12 13	that the lower melting point reflects either oxidation or stress environmental stress cracking. Does it also capture any impurities that may have been in the sample?  A. If there were impurities in the sample, they would also tend to lower the melt point.  Q. Okay. Are you able to tell from this DSC testing the extent to which the values reflect oxidation, environmental stress cracking, as opposed to impurities?  A. No.  Q. All right. Now, what is it about	7
2 3 4 5 6 7 8 9 10 11 12 13	Okay. We were talking about evidence that you had specific to Carolyn Lewis.  A. So the net result here is that we have oxygen in the clean looking, undegraded looking region of the fiber that's under the cracked region suggesting that it's beginning to oxidize as well, but it's not enough yet that it's actually cracked.  Q. Okay.  A. So we'll go to DSC.  Okay. So the first thing you do is look at Table 5, then look at the heat effusion.  First heat is 69.77 joules per gram.  Do you see that?	2 3 4 5 6 7 8 9 10 11 12 13 14	that the lower melting point reflects either oxidation or stress environmental stress cracking. Does it also capture any impurities that may have been in the sample?  A. If there were impurities in the sample, they would also tend to lower the melt point.  Q. Okay. Are you able to tell from this DSC testing the extent to which the values reflect oxidation, environmental stress cracking, as opposed to impurities?  A. No.  Q. All right. Now, what is it about Ms. Lewis's values that suggest to you that	7
2 3 4 5 6 7 8 9 10 11 12 13 14 15	Okay. We were talking about evidence that you had specific to Carolyn Lewis.  A. So the net result here is that we have oxygen in the clean looking, undegraded looking region of the fiber that's under the cracked region suggesting that it's beginning to oxidize as well, but it's not enough yet that it's actually cracked.  Q. Okay.  A. So we'll go to DSC.  Okay. So the first thing you do is look at Table 5, then look at the heat effusion.  First heat is 69.77 joules per gram.  Do you see that?  Q. No.	2 3 4 5 6 7 8 9 10 11 12 13 14 15	that the lower melting point reflects either oxidation or stress environmental stress cracking. Does it also capture any impurities that may have been in the sample?  A. If there were impurities in the sample, they would also tend to lower the melt point.  Q. Okay. Are you able to tell from this DSC testing the extent to which the values reflect oxidation, environmental stress cracking, as opposed to impurities?  A. No.  Q. All right. Now, what is it about Ms. Lewis's values that suggest to you that there's oxidation or environmental stress	7
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	Okay. We were talking about evidence that you had specific to Carolyn Lewis.  A. So the net result here is that we have oxygen in the clean looking, undegraded looking region of the fiber that's under the cracked region suggesting that it's beginning to oxidize as well, but it's not enough yet that it's actually cracked.  Q. Okay.  A. So we'll go to DSC.  Okay. So the first thing you do is look at Table 5, then look at the heat effusion.  First heat is 69.77 joules per gram.  Do you see that?  Q. No.  A. Table 5, last entry in the table,	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	that the lower melting point reflects either oxidation or stress environmental stress cracking. Does it also capture any impurities that may have been in the sample?  A. If there were impurities in the sample, they would also tend to lower the melt point.  Q. Okay. Are you able to tell from this DSC testing the extent to which the values reflect oxidation, environmental stress cracking, as opposed to impurities?  A. No.  Q. All right. Now, what is it about Ms. Lewis's values that suggest to you that there's oxidation or environmental stress cracking going on?	7
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	Okay. We were talking about evidence that you had specific to Carolyn Lewis.  A. So the net result here is that we have oxygen in the clean looking, undegraded looking region of the fiber that's under the cracked region suggesting that it's beginning to oxidize as well, but it's not enough yet that it's actually cracked.  Q. Okay.  A. So we'll go to DSC.  Okay. So the first thing you do is look at Table 5, then look at the heat effusion.  First heat is 69.77 joules per gram.  Do you see that?  Q. No.  A. Table 5, last entry in the table, under heat effusion for TM.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	that the lower melting point reflects either oxidation or stress environmental stress cracking. Does it also capture any impurities that may have been in the sample?  A. If there were impurities in the sample, they would also tend to lower the melt point.  Q. Okay. Are you able to tell from this DSC testing the extent to which the values reflect oxidation, environmental stress cracking, as opposed to impurities?  A. No.  Q. All right. Now, what is it about Ms. Lewis's values that suggest to you that there's oxidation or environmental stress cracking going on?  A. The value of her heat effusion is very	7
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	Okay. We were talking about evidence that you had specific to Carolyn Lewis.  A. So the net result here is that we have oxygen in the clean looking, undegraded looking region of the fiber that's under the cracked region suggesting that it's beginning to oxidize as well, but it's not enough yet that it's actually cracked.  Q. Okay.  A. So we'll go to DSC.  Okay. So the first thing you do is look at Table 5, then look at the heat effusion.  First heat is 69.77 joules per gram.  Do you see that?  Q. No.  A. Table 5, last entry in the table, under heat effusion for TM.  Q. What page are you on?	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	that the lower melting point reflects either oxidation or stress environmental stress cracking. Does it also capture any impurities that may have been in the sample?  A. If there were impurities in the sample, they would also tend to lower the melt point.  Q. Okay. Are you able to tell from this DSC testing the extent to which the values reflect oxidation, environmental stress cracking, as opposed to impurities?  A. No.  Q. All right. Now, what is it about Ms. Lewis's values that suggest to you that there's oxidation or environmental stress cracking going on?  A. The value of her heat effusion is very low, 69.77.	7
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	Okay. We were talking about evidence that you had specific to Carolyn Lewis.  A. So the net result here is that we have oxygen in the clean looking, undegraded looking region of the fiber that's under the cracked region suggesting that it's beginning to oxidize as well, but it's not enough yet that it's actually cracked.  Q. Okay.  A. So we'll go to DSC.  Okay. So the first thing you do is look at Table 5, then look at the heat effusion.  First heat is 69.77 joules per gram.  Do you see that?  Q. No.  A. Table 5, last entry in the table, under heat effusion for TM.  Q. What page are you on?  A. Page 63.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	that the lower melting point reflects either oxidation or stress environmental stress cracking. Does it also capture any impurities that may have been in the sample?  A. If there were impurities in the sample, they would also tend to lower the melt point.  Q. Okay. Are you able to tell from this DSC testing the extent to which the values reflect oxidation, environmental stress cracking, as opposed to impurities?  A. No.  Q. All right. Now, what is it about Ms. Lewis's values that suggest to you that there's oxidation or environmental stress cracking going on?  A. The value of her heat effusion is very low, 69.77.  Q. And you're unable to tell me the	7
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	Okay. We were talking about evidence that you had specific to Carolyn Lewis.  A. So the net result here is that we have oxygen in the clean looking, undegraded looking region of the fiber that's under the cracked region suggesting that it's beginning to oxidize as well, but it's not enough yet that it's actually cracked.  Q. Okay.  A. So we'll go to DSC.  Okay. So the first thing you do is look at Table 5, then look at the heat effusion.  First heat is 69.77 joules per gram.  Do you see that?  Q. No.  A. Table 5, last entry in the table, under heat effusion for TM.  Q. What page are you on?  A. Page 63.  Q. I'm sorry, I was on 62.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	that the lower melting point reflects either oxidation or stress environmental stress cracking. Does it also capture any impurities that may have been in the sample?  A. If there were impurities in the sample, they would also tend to lower the melt point.  Q. Okay. Are you able to tell from this DSC testing the extent to which the values reflect oxidation, environmental stress cracking, as opposed to impurities?  A. No.  Q. All right. Now, what is it about Ms. Lewis's values that suggest to you that there's oxidation or environmental stress cracking going on?  A. The value of her heat effusion is very low, 69.77.  Q. And you're unable to tell me the extent to which that is oxidation and	7
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	Okay. We were talking about evidence that you had specific to Carolyn Lewis.  A. So the net result here is that we have oxygen in the clean looking, undegraded looking region of the fiber that's under the cracked region suggesting that it's beginning to oxidize as well, but it's not enough yet that it's actually cracked.  Q. Okay.  A. So we'll go to DSC.  Okay. So the first thing you do is look at Table 5, then look at the heat effusion.  First heat is 69.77 joules per gram.  Do you see that?  Q. No.  A. Table 5, last entry in the table, under heat effusion for TM.  Q. What page are you on?  A. Page 63.  Q. I'm sorry, I was on 62.  A. Go up. First table, Table 5.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	that the lower melting point reflects either oxidation or stress environmental stress cracking. Does it also capture any impurities that may have been in the sample?  A. If there were impurities in the sample, they would also tend to lower the melt point.  Q. Okay. Are you able to tell from this DSC testing the extent to which the values reflect oxidation, environmental stress cracking, as opposed to impurities?  A. No.  Q. All right. Now, what is it about Ms. Lewis's values that suggest to you that there's oxidation or environmental stress cracking going on?  A. The value of her heat effusion is very low, 69.77.  Q. And you're unable to tell me the extent to which that is oxidation and environmental stress cracking as opposed to	7
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	Okay. We were talking about evidence that you had specific to Carolyn Lewis.  A. So the net result here is that we have oxygen in the clean looking, undegraded looking region of the fiber that's under the cracked region suggesting that it's beginning to oxidize as well, but it's not enough yet that it's actually cracked.  Q. Okay.  A. So we'll go to DSC.  Okay. So the first thing you do is look at Table 5, then look at the heat effusion.  First heat is 69.77 joules per gram.  Do you see that?  Q. No.  A. Table 5, last entry in the table, under heat effusion for TM.  Q. What page are you on?  A. Page 63.  Q. I'm sorry, I was on 62.  A. Go up. First table, Table 5.  Q. Okay.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	that the lower melting point reflects either oxidation or stress environmental stress cracking. Does it also capture any impurities that may have been in the sample?  A. If there were impurities in the sample, they would also tend to lower the melt point.  Q. Okay. Are you able to tell from this DSC testing the extent to which the values reflect oxidation, environmental stress cracking, as opposed to impurities?  A. No.  Q. All right. Now, what is it about Ms. Lewis's values that suggest to you that there's oxidation or environmental stress cracking going on?  A. The value of her heat effusion is very low, 69.77.  Q. And you're unable to tell me the extent to which that is oxidation and environmental stress cracking as opposed to impurities?	7
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	Okay. We were talking about evidence that you had specific to Carolyn Lewis.  A. So the net result here is that we have oxygen in the clean looking, undegraded looking region of the fiber that's under the cracked region suggesting that it's beginning to oxidize as well, but it's not enough yet that it's actually cracked.  Q. Okay.  A. So we'll go to DSC.  Okay. So the first thing you do is look at Table 5, then look at the heat effusion.  First heat is 69.77 joules per gram.  Do you see that?  Q. No.  A. Table 5, last entry in the table, under heat effusion for TM.  Q. What page are you on?  A. Page 63.  Q. I'm sorry, I was on 62.  A. Go up. First table, Table 5.  Q. Okay.  A. Last line of that table, and then the	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	that the lower melting point reflects either oxidation or stress environmental stress cracking. Does it also capture any impurities that may have been in the sample?  A. If there were impurities in the sample, they would also tend to lower the melt point.  Q. Okay. Are you able to tell from this DSC testing the extent to which the values reflect oxidation, environmental stress cracking, as opposed to impurities?  A. No.  Q. All right. Now, what is it about Ms. Lewis's values that suggest to you that there's oxidation or environmental stress cracking going on?  A. The value of her heat effusion is very low, 69.77.  Q. And you're unable to tell me the extent to which that is oxidation and environmental stress cracking as opposed to impurities?  A. Well, I don't think we're not	7
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	Okay. We were talking about evidence that you had specific to Carolyn Lewis.  A. So the net result here is that we have oxygen in the clean looking, undegraded looking region of the fiber that's under the cracked region suggesting that it's beginning to oxidize as well, but it's not enough yet that it's actually cracked.  Q. Okay.  A. So we'll go to DSC.  Okay. So the first thing you do is look at Table 5, then look at the heat effusion.  First heat is 69.77 joules per gram.  Do you see that?  Q. No.  A. Table 5, last entry in the table, under heat effusion for TM.  Q. What page are you on?  A. Page 63.  Q. I'm sorry, I was on 62.  A. Go up. First table, Table 5.  Q. Okay.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	that the lower melting point reflects either oxidation or stress environmental stress cracking. Does it also capture any impurities that may have been in the sample?  A. If there were impurities in the sample, they would also tend to lower the melt point.  Q. Okay. Are you able to tell from this DSC testing the extent to which the values reflect oxidation, environmental stress cracking, as opposed to impurities?  A. No.  Q. All right. Now, what is it about Ms. Lewis's values that suggest to you that there's oxidation or environmental stress cracking going on?  A. The value of her heat effusion is very low, 69.77.  Q. And you're unable to tell me the extent to which that is oxidation and environmental stress cracking as opposed to impurities?	7

50 (Pages 194 to 197)

1 2	Page 198		Page 200
	different, totally different mechanisms for	1	Table 18, Page 92. The control samples showed
	degradation of the polymer. Both are	2	anywhere from 71 million counts to 92 million
3	degradation, but one is physical mechanical	3	counts. In this case, we also ran formalin
4	degradation where the chains are forced to part	4	treated control samples which showed levels that
5	and they crack, and the other is actual literal	5	were right in the middle of the controls, some
6	oxidation. They're different.	6	were higher, some were lower, fit the normal
7	Q. Let me ask the question different,	7	range for controls, indicating formalin didn't
8	because that wasn't what I was trying to get at.	8	extract the lauryl thiodipropionate.
9	It's fair to say you don't know the	9	So the level for Ms. Lewis was 611,000
10	extent to which impurities in the test sample	10	compared to 80 million, so it's about in the 2
11	may have contributed to the low heat effusion	11	percent range left for the lauryl
12	values for Carolyn Lewis as reflected on Table 5	12	thiodipropionate antioxidant compared to the
13	on Page 63, correct?	13	controls, and the formalin controls.
14	A. Correct.	14	Q. Okay. Let's talk about Page 92 for a
15	Q. Thank you.	15	minute.
16	What else do you have for Ms. Lewis?	16	Here you have control samples again?
17	A. FTIR. Page 71, Figure 81, Figure 82.	17	A. Right.
18	We have, again, the carbonyl that are on 1760	18	Q. Why do you do a duplicate control like
19	and another one around the shoulder is about	19	you do on 3422128? Do you have do that as a
20	1740, that's under that large 1653 amide 1 band.	20	test?
21	Q. Okay. Let me stop you here for a	21	A. Yes. A test to see how reproducible
22	second.	22	the material itself might be.
23	Figure 81 says "Microscopy images	23	Q. Okay. Or how reliable your test might
24	showing particles recovered from explant sample	24	be?
25	13674 (particle 1)."	25	A. Well, I suppose that's another way to
	Page 199		Page 201
1	How many particles did you remove from	1	look at it.
2	Ms. Lewis's explant?	2	Q. And
3	A. Didn't count them. Lots. The surface	3	A. But we ran standards, and we get the
4	sluffs off.	4	same we make the injection standards twice,
5	Q. Did you analyze any others? This is	5	we get the same area, so that's not
6	noted as particle 1. That suggests to me that	6	Q. My point being is that for control
7	there are others that are identified?	7	sample 3422128, you've got 71,633,460, and then
1	A. Right.	8	you test exactly the same mesh in a different
8	No.	9	
9			place in the mesh in the duplicate control and
9 10	Q. No what? No, you don't know, or no	10	you get 96 thousand 522
9 10 11	A. No, it wasn't the only one analyzed.	11	you get 96 thousand 522 A. 96 million, yes.
9 10 11 12	<ul><li>A. No, it wasn't the only one analyzed.</li><li>Q. Do you still have the others?</li></ul>	11 12	you get 96 thousand 522 A. 96 million, yes. Q. Thank you.
9 10 11 12 13	<ul><li>A. No, it wasn't the only one analyzed.</li><li>Q. Do you still have the others?</li><li>A. I don't know. I have to check.</li></ul>	11 12 13	you get 96 thousand 522 A. 96 million, yes. Q. Thank you 96,522,909, which is about

We could be extracting regions of the mesh that have flaked off the polypropylene that we see flaked off in the IR, and what we're extracting here is a residual, call it clean mesh.  Q. You don't know why there's a  40 percent difference in the test of the same mesh?

51 (Pages 198 to 201)

because the polypropylene, the cracked polypropylene is gone in that region at that point, and we are just extracting the enriched area only. Q. Okay. A. I think that would easily account for that difference. Q. But do you have a scientific explanation for the reasons why the same piece of mesh tests differently by some 28 million DAs? MR. ANDERSON: Other than what he just testified to? MR. ANDERSON: Other than what he just Scientific explanations or reasonable degree of scientific explanations or a reasonable degree of scientific explanations or a reasonable of the - Q. Okay. A. I think I tjust gave it, my estimate of the - Q. Okay. A. I think I ljust gave it, my estimate of the - Q. Ok I shat your opinion to a reasonable degree of scientific explanations or reasonable of scientific explanations or reasonable degree of scientific explanations or reasonable of the - Q. Ok I shat your opinion to a reasonable degree of scientific explanations or reasonable of the - Q. O Is that your opinion to a reasonable degree of scientific explanations or reasonable of the - Q. O Is that your opinion to a reasonable of explanation for the reasons why the same piece of mesh tests differently by some 28 million that 12 MR. ANDERSON: Other than what he just the pages. A. Okay. Q. Okay. A. Okay. Q. Okay. A. So now that's a relatively higher level than any of the others, isn't if, for the anticividant, so what would I expect to see look degree of scientific explanation is right. So left's go look at the SEM photograph for 13411, which will be the actual degree of cracking, and just see if it correlates or not. Q. Well, if you look at 3405405, the out of the polymer - at least the formalin isn't able to extract it out of the polymer because you're right in the heart of the anything to the polymer in this case, showing the polymer because you're right in the heart of the anything to		Page 202		Page 204
polypropylene is gone in that region at that point, and we are just extracting the enriched area only.  Q. Okay. A. I think we've pretty well covered it. I think l can show you well, one other thing that might be of interest if we look at Table go back and look at that table for a minute longer, and just pick arbitrarily 13411, it has 12 million area counts for it has 1	1	because the polypropylene, the cracked	1	A True
point, and we are just extracting the enriched area only.  A. I think that would easily account for that difference.  Q. Okay.  A. I think that would easily account for that difference.  Q. But do you have a scientific explanation for the reasons why the same piece of mesh tests differently by some 28 million 10 DAs?  MR. ANDERSON: Other than what he just testified to?  MR. ANDERSON: Other than what he just testified to?  MR. ANDERSON: Other than what he just testified to?  Q. Scientific explanations or reasonable scientific explanations or reasonable to the question?  A. I think I just gave it, my estimate of the area of the area of the same with the same than the polymer of scientific certainty what happened, or are you just positing it as something you need a rey ou just positing it as something you need a rey ou just positing it as something you need a rey ou just positing it as something you need a rey ou just positing it as something you need a we didn't extract — the formalin with this one. Because of scientific certainty with this one. Because we didn't extract — the formalin isn't able to extract it out of the polymer because you're right in the heart of the average.  Q. Well, if you look at 3405405, the control is 79, and the formalin control is 10 million less, isn't it? And the same with he heart of the average.  Q. Well, if you look at 3405405, the control is 79, and the formalin control is 10 million less, isn't it? And the same with how the ratios are working out here? You're talking about a 100-fold change up above.  A. I think that wave pretty well dook at Table - go back and look at that table for a minute longer, and just part in timute longer, and just pare you on, please?  A. Okay.  A. Same page, 92.  Q. Vent page are you on, please?  A. Okay.  A. So now that's a relatively higher level than any of the others, isn't it, for the antioxidant. so what would at Papect to see? I would expect to see less cracking in that sample if I went back and my theory is right, which will be the actual degre				
4 area only.  Q. Okay.  A. I think that would easily account for that difference.  9 explanation for the reasons why the same piece of mesh tests differently by some 28 million  10 DAs?  11 DAs?  12 MR. ANDERSON: Other than what he just 13 testified to?  13 testified to?  14 BY MR. THOMAS:  Q. Scientific certainty, do you have the answer to 16 escientific certainty, do you have the answer to 17 the question?  A. I think I just gave it, my estimate of 19 the				
5 Q. Ókay. 6 A. I think that would easily account for that difference. 7 Q. But do you have a scientific explanation for the reasons why the same piece of mesh tests differently by some 28 million 20 of mesh tests differently by some 28 million 21 DAs? 2 MR. ANDERSON: Other than what he just testified to? 3 BY MR. THOMAS: 4 BY MR. THOMAS: 5 Q. Scientific explanations or reasonable scientific certainty, do you have the answer to the question? 6 A. I think I just gave it, my estimate of the question? 7 A. I think I just gave it, my estimate of to test? 8 A. I think I just gave it, my estimate of are out just positing it as something you need to test? 9 Q. Is that your opinion to a reasonable degree of scientific certainty what happened, or are you just positing it as something you need to test? 9 Q. Scientific sertainty what happened, or are you just positing it as something you need to test? 9 Q. Reasonable degree of scientific certainty what happened, or are you just positing it as something you need to test? 9 Q. Reasonable degree of scientific certainty what happened, or are you just positing it as something you need to test? 9 Q. Reasonable degree of scientific certainty what happened, or are you just positing it as something you need to test. 10 to test? 11 Evel than any of the others, isn't it, for the antioxidants, so what would I expect to see? I would expect to see elses cracking in that sample if I went back and my theory is right, my scientific opinion is right. So let's go look at the SEM photograph for 13411, which will be at the actual degree of cracking, and just see if it correlates or not. 10 Q. What page is it? 11 L think it's reasonable degree 12 Q. Page 37? 13 A. Yes. I think it's reasonable degree 13 of scientific certainty with this one. Because we didn't extract — the formalin in the heart of the average. 14 we didn't extract — the formalin didn't do anything to the polymer briefs case, showing me it's not coming out of the polymer because you're right in the heart of the average. 14 we di				
6 A. I think that would easily account for 7 that difference. 8 Q. But do you have a scientific explanation for the reasons why the same piece of mesh tests differently by some 28 million 1 DAs? 1 MR. ANDERSON: Other than what he just 1 testified to? 1 Symm. THOMAS: 1 Explanation for certainty, do you have the answer to the question? 2 A. I think I just gave it, my estimate of 1 the				•
that difference.  Q. But do you have a scientific explanation for the reasons why the same piece of mesh tests differently by some 28 million DAs?  MR. ANDERSON: Other than what he just testified to?  BY MR. THOMAS:  Q. Scientific explanations or reasonable scientific certainty, do you have the answer to the question?  A. I think I just gave it, my estimate of the Q. U. Is that your opinion to a reasonable degree of scientific certainty what happened, or are you just positing it as something you need to test?  A. I think it's reasonable, yes.  Q. Reasonable degree of scientific ertainty, is that the answer to the problem? A. Yes. I think it's reasonable degree of scientific certainty with this one. Because we didn't extract the formalin isn't able to extract it out of the polymer because you're right in the heart of the average.  Q. Well, if you look at 3405405, the control is 79, and the formalin control is 10 million less, isn't it? A. Do you have a scientific  Talking about a 20 percent change down here, and l'm talking about a 100-fold change up above.  That is a 2 million area counts for Q. What page are you on, please?  Q. I put mine away. I have to figure out the pages.  A. A. Okay.  Q. Okay.  A. So now that's a relatively higher level than any of the others, isn't it, for the antioxidants, so what would l'expect to see? I would expect to see less cracking in that sample if I went back and my theory is right, my scientific opinion is right. So let's go look at the SEM photograph for 13411, which will be the actual degree of cracking, and just see if it correlates or not.  Q. What page is it?  A. I'm looking. I'm getting close. It's  Page 205  A. I'm looking. I'm getting close. It's  A. Minimal, this is what we would call minimal cracking.  Q. Oy point to Figure 38 on Page 37 as suggesting that suggesting what?  A. A. Minimal, this is what we would call minimal cracking.  A. A. On you have the answer to the pages.  A. Okay.  Q. Okay.  A. Fin looking. I'm feet a particular to the page.  Q. What				
8 Q. But do you have a scientific explanation for the reasons why the same piece of mesh tests differently by some 28 million DAS?  12 MR. ANDERSON: Other than what he just testified to? 13 testified to? 14 BY MR. THOMAS: 15 Q. Scientific explanations or reasonable scientific certainty, do you have the answer to the question? 16 A. I think I just gave it, my estimate of the question? 17 degree of scientific certainty what happened, or are you just positing it as something you need to test? 18 A. I think it's reasonable, yes. 20 Q. Reasonable degree of scientific certainty what happened, or are you just positing it as something you need to test? 21 A. I think it's reasonable degree of scientific certainty with this one. Because we didn't extract – the formalin indin't do anything to the polymer in this case, showing me it's not coming out of the polymer - at least the formalin inst habe to extract it out of the polymer because you're right in the heart of the average. 10 Q. Well, if you look at 3405405, the control is 79, and the formalin control is 10 million less, isn't it? And the same with a was 17 million less, isn't it? 14 La No you have any idea, though, whathow the ratios are working out here? You're talking about a 100-fold change up above.  15 defined to? 16 A. I think as 21 million area counts for 20 A. Same page, 92. 21 A. Okay. 22 A. Okay. 24 A. Shaw way. I have to figure out the pages. 34 A. Os now that's a relatively higher level than any of the others, isn't it, for the antioxidants, so what would I expect to see less cracking in that sample if I would expect to see less cracking in that sample if I would expect to see less cracking in that sample if I would expect to see less cracking in that sample if I went back and my theory is right, my scientific opinion is right. So let's go look at the SEM photograph for 13411, which will be the actual degree of cracking due to the high level of antioxidant still there, and there it is. It's minimally cracked.  37 Q. Page 37? 38 Q. Page 37? 39 Q. Pa				
9 explanation for the reasons why the same piece of mesh tests differently by some 28 million 11 DAs? 12 MR. ANDERSON: Other than what he just testified to? 13 testified to? 14 BY MR. THOMAS: 15 Q. Scientific explanations or reasonable scientific certainty, do you have the answer to the question? 16 the question? 17 A. I think I just gave it, my estimate of the — 18 A. I think I just gave it, my estimate of the degree of scientific certainty what happened, or are you just positing it as something you need to test? 18 A. I think it's reasonable, yes. 20 Q. Reasonable degree of scientific certainty with this one. Because we didn't extract — the formalin dish't do anything to the polymer in this case, showing me it's not coming out of the polymer — at least of the formalin isn't able to extract it out of the polymer because you're right in the heart of the average. 10 Q. Well, if you look at 3405405, the control is 79, and the formalin control is 10 million less, isn't it? And the same with a saverage. 10 Q. Well, if you look at 3405405, the control is 79, and the formalin control is 10 was 17 million less, isn't it? And the same with a saverage. 10 A. Do you have any idea, though, what — how the ratios are working out here? You're talking about a 100-fold change up above. 11 A. Son ow that's a relatively higher the pages. 12 A. Oo kay. 14 A. So now that's a relatively higher level than any of the others, isn't it, for the antixidants, so what would 1 expect to see? I would expect to see less cracking in that sample if I went back and my thory is right, my scientific opinion is right. So let's go look at the SEM photograph for 13411, which will be the actual degree of cracking, and just see if it correlates or not. 13 37. 14 Certainty, is that the answer to the problem? 25 A. Yes. I think it's reasonable degree 26 of scientific certainty with this one. Because we didn't extract — the formalin dish't do anything to the polymer — at least of the pages. 27 A. Right. I would expect to see a low degree of cracking due				
of mesh tests differently by some 28 million DAS?  MR. ANDERSON: Other than what he just testified to?  BY MR. THOMAS:  Coscientific explanations or reasonable scientific certainty, do you have the answer to the question?  A. I think I just gave it, my estimate of the region of scientific certainty what happened, or are you just positing it as something you need to test?  A. I think it's reasonable, yes.  A. I think it's reasonable degree of scientific  Certainty, is that the answer to the problem? A. Yes. I think it's reasonable degree of scientific certainty with this one. Because we didn't extract the formalin didn't do anything to the polymer in this case, showing me it's not coming out of the polymer because you're right in the heart of the average.  Q. Well, if you look at 3405405, the control is 79, and the formalin control is 10 million less, isn't it?  A. Do you have any idea, though, what how the ratios are working out here? You're talking about a 200 percent change down here, and I must hap above.  A. Same page, 92.  Q. I put mine away. I have to figure out the tep ages.  A. Okay.  A. Okay.  A. Os now that's a relatively higher level than any of the others, isn't it, for the antioxidants, so what would 1 expect to see? I would expect to see less cracking in that sample if I went back and my theory is right, my scientific opinion is right. So let's go look at the SEM photograph for 13411, which will be the actual degree of cracking, and just see if it correlates or not.  A. I millooking. I'm getting close. It's  A. Tim looking. I'm getting close. It's  A. Right. I would expect to see a low degree of cracking due to the high level of antioxidant still there, and there it is. It's minimally cracked.  Q. Well, if you look at 3405405, the source of the polymer in the heart of the average.  Q. Well, if you look at 3405405, the source of the polymer in the heart of the average.  Q. Well, if you look at 3405405, the source of the polymer in the heart of the average.  Q. Well, if you look at 3405405, th				
DAS?  MR. ANDERSON: Other than what he just testified to?  BY MR. THOMAS:  Q. Scientific certainty, do you have the answer to the question?  A. I think I just gave it, my estimate of the —  Q. 12 MR. ANDERSON: Other than what he just testified to? 13 BY MR. THOMAS: 14 Q. Okay. 15 Q. Scientific explanations or reasonable scientific certainty, do you have the answer to the question? 18 A. I think I just gave it, my estimate of the 19 the 20 Q. Is that your opinion to a reasonable degree of scientific certainty what happened, or are you just positing it as something you need to test? 24 A. I think it's reasonable, yes. 25 Q. Reasonable degree of scientific 26 a Certainty, is that the answer to the problem? 27 A. Yes. I think it's reasonable degree of scientific certainty with this one. Because we didn't extract the formalin didn't do anything to the polymer in this case, showing me it's not coming out of the polymer at least the formalin isn't able to extract it out of the polymer because you're right in the heart of the average. 10 Q. Well, if you look at 3405405, the control is 79, and the formalin control is 10 million less, isn't it? And the same with was 17 million less, isn't it? 18 A. Okay. 19 A. So now that's a relatively higher level than any of the others, isn't it, for the antoxidants, so what would I expect to see? I would expect to see less cracking in that sample if I went back and my theory is right, my scientific opinion is right. So le's go look at the SEM photograph for 13411, which will be the actual degree of cracking, and just see if it correlates or not. 24 Q. What page is it? 25 A. I'm looking. I'm getting close. It's 26 A. Right. I would expect to see a low degree of cracking due to the high level of antioxidants still there, and there it is. It's minimally cracked.  Q. That's the one photo you have of all this mesh?  MR. ANDERSON: What?  MR. ANDERSON: What?  MR. ANDERSON: What?  MR. And it correlates with a high level of antioxidant. So it's being protected, doesn't				
testified to?  BY MR. THOMAS:  Q. Scientific explanations or reasonable scientific certainty, do you have the answer to the question?  A. I think I just gave it, my estimate of the —  Q. Is that your opinion to a reasonable degree of scientific certainty what happened, or are you just positing it as something you need to test?  A. I think it's reasonable, yes.  Q. Reasonable degree of scientific  Page 203  Page 205  1 certainty, is that the answer to the problem?  A. Yes. I think it's reasonable degree of scientific certainty with this one. Because we didn't extract — the formalin didn't do anything to the polymer in this case, showing me it's not coming out of the polymer real least the formalin isn't able to extract it out of the polymer because you're right in the heart of the average.  Q. Well, if you look at 3405405, the control is 79, and the formalin control is 10 million less, isn't it?  A. Do you have any idea, though, what—how the ratios are working out here? You're talking about a 20 percent change down here, and large in that sample level than any of the others, isn't it, for the antioxidants, so what would I expect to see? I would expect to see ess cracking in that sample if'I went back and my theory is right, my scientific opinion is right. So let's go look at the SEM photograph for 13411, which will be the actual degree of cracking, and just see if it correlates or not.  Q. What page is it?  Q. Page 37?  A. Right. I would expect to see a low degree of cracking due to the high level of antioxidants still there, and there it is. It's minimally cracked.  Q. That's the one photo you have of all this mesh?  MR. ANDERSON: What?  BY MR. THOMAS:  Q. Okay.  A. Minimal, this is what we would call minimal cracking.  Q. Okay.  A. And it correlates with a high level of antioxidant. So it's being protected, doesn't

129 Q. 1 KHOW that.   129 Teact, doesn't clack. Of it doesn't clack as	19	Q. I know that.	19	react, doesn't crack. Or it doesn't crack as
20 A. It's irrelevant. 20 much, it obviously is still cracking some, but	20	A. It's irrelevant.	20	much, it obviously is still cracking some, but
Q. Except we don't know how long these 21 it's minimal.		Q. Except we don't know how long these		
22 mesh explants were in formalin, do we? 22 Q. Anything else for Carolyn Lewis?				Q. Anything else for Carolyn Lewis?
A. We put these other ones in formalin 23 A. No.				A. No.
24 and nothing happened. 24 Q. Let's go now to the Batiste report.		and nothing happened.	24	Q. Let's go now to the Batiste report.
25 Q. For two days, right? 25 A. Okay.				

52 (Pages 202 to 205)

	Page 206		Page 208
1	Q. The Batiste report has been marked as	1	Q. (Indicating).
2	Exhibit Number 2.	2	MR. ANDERSON: 28th.
3	MR. THOMAS: Just for the record, I	3	A. Should be the 28th? I guess. We were
4	just got this late Monday night, and I've had a	4	all this was just taken out of the patient, I
5	chance to go through it a little. We'll reserve	5	believe, most recently, so we've been working on
6	on this. I know you disagree with that, but we	6	it.
7	may reserve to come back to ask more questions	7	BY MR. THOMAS:
8	about this report at a later time.	8	Q. Please understand I've got to mark
9	MR. ANDERSON: I mean I do object to	9	that one, too, just in case there's something
10	it, because there was an agreement made between	10	different.
11	Christy Jones and Rich Freese, and they agreed	11	A. I don't think you're going to be
12	that in the in order to help both sides,	12	finding any differences.
13	because everyone has a lot going on, that there	13	Q. I'm hopeful I won't.
14	was an agreement that you guys wanted to take	14	MR. ANDERSON: Not a lot I would bet
15	in fact, your attorneys from or the attorneys	15	on, but that one I will bet you there's
16	from Butler Snow I have to put this on the	16	absolutely no differences in that report other
17	record. If you're going to say you're going to	17	than that date.
18	reserve the right, I'm going to object and I'm	18	MR. THOMAS: Just for the record, I'm
19	going to put the reasons on.	19	marking as Exhibit Number 6 what Dr. Jordi had
20	Attorneys from Butler Snow reached out	20	in his file as being the final report for Linda
21	and said "any of the same experts who are going	21	Batiste dated October 30th, 2013. The one that
22	to be in both Lewis and Batiste, we'd like to	22	was produced to us that's been marked as
23	try to take their depositions at the same time	23	Exhibit 2 is October 28th.
24	so we don't have to come back and everybody fly	24	
25	around the country and do them at different	25	
	Page 207		Page 209
1	times." So we agreed to try to do that.	1	(Whereupon, Jordi Exhibit Number 6,
2	Also the agreement was that within 48	2	10/30/13 Final Report for Linda
3	hours of the depo we would get we said we'd	3	Batiste, was marked for
4	try within 48 hours of the depo, which we did,	4	identification.)
5	to send over the Batiste results.	5	BY MR. THOMAS:
6	And that was the agreement between the	6	Q. Mine is two-sided, and it's twice as
7	parties.	7	big as yours.
8	MR. THOMAS: I understand. I just	8	A. Yes, sir. No.
9	MR. ANDERSON: So I don't see how you	9	MR. ANDERSON: This is the rest of the
10	can then reserve your right after your side has	10	data.
11	already made an agreement, and we're doing it	11	A. This is the rest of it.
12	exactly the way your side wanted to.	12	BY MR. THOMAS:
13	MR. THOMAS: I'm not sure anybody	13	Q. Just for the record, I didn't realize
14	contemplated getting 278 pages, but I get it. I	14	there was a second set. So we have all of it,
15	just need to make that statement.	15	the data makes it twice as big as mine, as it
16	MR. ANDERSON: After getting a	16	should be. Thank you.
17	thousand on the others, I would think that would	17	Okay. Doctor, do you intend to rely
18	be reasonable. But go ahead with your	18	on the testing that you did in the Carolyn Lewis
19	questions.	19	case in support of your opinions in the Batiste
20	BY MR. THOMAS:	20	case?
21	Q. Doctor, when did you prepare the final	21	A. Yes. They're the same, the same
22	report of Linda Batiste? It's dated October	22	analyses, yes.
23	the 28th, 2013, would that be it?	23	Q. My question is a little different.
24	A. The final date I have is October 30th,	24	You did 22 plus, 22 or 23
25	2013. It's the same. You've got	25	A. 23.

53 (Pages 206 to 209)

1	Page 210		Page 212
	Q 23 explant analyses of other	1	same testing for Ms. Batiste as you did for the
2	patients	2	analysis in Exhibit 1?
3	A. Yes.	3	Ä. Yes.
4	Q that are not included in your	4	Q. Is it appropriate to use the strike
5	analysis in the Batiste case.	5	that.
6	Do you intend as a part of your	6	Can we rely on your analysis in
7	opinions in Batiste to rely on your work that	7	Exhibit Number 1 with respect to the various
8	you did in Carolyn Lewis?	8	tests that we've talked about all day today in
9	MR. ANDERSON: I can tell you as his	9	understanding how you conducted the test for
10	attorney that's exactly what we're going to do,	10	Linda Batiste?
11	because there is no report requirement in Texas.	11	A. It was run the same way.
12	MR. THOMAS: Just asking.	12	Q. So any discussions that we've had
13	MR. ANDERSON: Let me just finish,	13	today about your methodology, your controls,
14	because he may not understand the legal	14	your results in the Carolyn Lewis report,
15	ramifications and what's going on as between a	15	Exhibit Number 1, would apply equally to the
16	state court requirement and a Federal Court	16	Linda Batiste report, Exhibit 2?
17	requirement. And there is no reporting	17	A. Yes.
18	requirement in Texas state court.	18	Q. All right. For Linda Batiste, you
19	But we did agree, even though there is	19	have a series of fiber mesh control samples.
20	no reporting requirement, that we would provide	20	Are these new mesh control samples different
21	data to make it easier for you guys to take a	21	from the mesh control samples you analyzed in
22	deposition, even though we don't have to provide	22	Carolyn Lewis?
23	a report. So we did that, and we gave it to you	23	(Witness reviewing documents.)
24	48 hours before the depo, like you asked.	24	A. They're the same.
25	So is he going to rely on all of his	25	BY MR. THOMAS:
	Page 211		Page 213
1	opinions in this case in Texas? You bet.	1	Q. Okay. And how can you tell they're
2	MR. THOMAS: Thank you.	2	the same; by the test numbers?
3	BY MR. THOMAS:	3	A. Same numbers. Table 1 on both.
4	Q. The testing that you did in the	4	Q. All right.
5	Batiste case differs from the testing that you	5	A. Page 6 versus Page 13 in the
6	did in the Carolyn Lewis case, I think.	6	Exhibit 1.
	A. In what way?	_	
7		7	Q. Not that this makes any difference to
7 8	Q. I don't think you did as much.	8	the ultimate test, do you know whether they were

THOMAS: Thank you.  BY MR. THOMAS:  Q. I'm looking at the "Summary of Results."  A. Page, please?  Q. Page 3. It says "A series of mesh

54 (Pages 210 to 213)

	Page 214		Page 216
1	established that the mesh control samples are	1	scanning calorimetry analysis showed no change
2	the same control samples that you used for your	2	in crystallinity for the cracked explant sample
3	comparisons with Carolyn Lewis in Exhibit 1,	3	compared with the control samples."
4	correct?	4	What does that mean?
5	A. Correct.	5	A. That means that the crystallinity
6	Q. And the explant sample is for Linda	6	didn't change, and the sample won't be more
7	Batiste who is the Plaintiff in the Texas	7	likely to be subjected to environmental stress
8		8	
9	action, right?	9	cracking. Q. Okay.
10	A. Correct.	10	•
	Q. "Upon handling, it was observed that		A. Any damage we see would have to be
11	the explant sample showed some decreased	11  12	oxidative type damage.
12	elasticity as compared to the control fiber mesh		Q. So can we eliminate from the Linda
13	samples."	13	Batiste analysis any environmental stress
14	Again, this represents the same	14	cracking?
15	reporting that you made in the Carolyn Lewis	15	A. Yes, you can eliminate the DSC data if
16	case about your handling of the mesh explant as	16	you want, because it's going to say there's no
17	compared to the control?	17	change.
18	A. That's right.	18	Q. Okay. So you have no molecular weight
19	Q. And do you have any recollection in	19	change and no DSC change?
20	the Batiste matter for comparing the explant to	20	A. That's correct. In this one sample.
21	the formalin control samples?	21	Q. I understand.
22	A. Formalin control sample, no, I don't.	22	Do you know when Ms. Batiste had her
23	I felt the explanted material was rigid, and the	23	surgery to remove her explant?
24	pristine felt very friable.	24	A. I don't know the exact date, no. It
25	Q. Okay. Next paragraph, "Cracking in	25	was recent, within the last couple weeks,
	_ 01=

2 3 4 5 6 7 8 9	the explant sample was observed to propagate in a direction perpendicular to the fiber draw direction. It was noted to be primarily on the fiber surface."  That's the same finding that you made for Carolyn Lewis?  A. Yes, that will be reflected in the photos, SEM graphs.  Q. "Analysis" I'm down in next	2 3 4 5 6 7 8	something like that.  Q. Last sentence of the last paragraph before you get to the table of contents, "It was found that the explant sample showed significantly less signal for the antioxidants as compared to the control sample, under 2 percent for Santonox R and dilauryl thiodipropionate."  A. That's right.
2 3 4 5 6 7 8 9	the explant sample was observed to propagate in a direction perpendicular to the fiber draw direction. It was noted to be primarily on the fiber surface."  That's the same finding that you made for Carolyn Lewis?  A. Yes, that will be reflected in the photos, SEM graphs.  Q. "Analysis" I'm down in next paragraph now "analysis of the explanted	2 3 4 5 6 7 8 9	something like that.  Q. Last sentence of the last paragraph before you get to the table of contents, "It was found that the explant sample showed significantly less signal for the antioxidants as compared to the control sample, under 2 percent for Santonox R and dilauryl thiodipropionate."  A. That's right.  Q. What does that mean?
2 3 4 5 6 7 8 9 10 11	the explant sample was observed to propagate in a direction perpendicular to the fiber draw direction. It was noted to be primarily on the fiber surface."  That's the same finding that you made for Carolyn Lewis?  A. Yes, that will be reflected in the photos, SEM graphs.  Q. "Analysis" I'm down in next paragraph now "analysis of the explanted fiber mesh by GPC-HT indicated that large scale	2 3 4 5 6 7 8 9 10	something like that.  Q. Last sentence of the last paragraph before you get to the table of contents, "It was found that the explant sample showed significantly less signal for the antioxidants as compared to the control sample, under 2 percent for Santonox R and dilauryl thiodipropionate."  A. That's right.  Q. What does that mean?  A. That means that 98 percent of it was
2 3 4 5 6 7 8 9 10 11 12	the explant sample was observed to propagate in a direction perpendicular to the fiber draw direction. It was noted to be primarily on the fiber surface."  That's the same finding that you made for Carolyn Lewis?  A. Yes, that will be reflected in the photos, SEM graphs.  Q. "Analysis" I'm down in next paragraph now "analysis of the explanted fiber mesh by GPC-HT indicated that large scale molecular weight degradation had not occurred in	2 3 4 5 6 7 8 9 10 11 12	something like that.  Q. Last sentence of the last paragraph before you get to the table of contents, "It was found that the explant sample showed significantly less signal for the antioxidants as compared to the control sample, under 2 percent for Santonox R and dilauryl thiodipropionate."  A. That's right.  Q. What does that mean?  A. That means that 98 percent of it was gone.
2 3 4 5 6 7 8 9 10 11 12 13	the explant sample was observed to propagate in a direction perpendicular to the fiber draw direction. It was noted to be primarily on the fiber surface."  That's the same finding that you made for Carolyn Lewis?  A. Yes, that will be reflected in the photos, SEM graphs.  Q. "Analysis" I'm down in next paragraph now "analysis of the explanted fiber mesh by GPC-HT indicated that large scale molecular weight degradation had not occurred in the samples."	2 3 4 5 6 7 8 9 10 11 12 13	something like that.  Q. Last sentence of the last paragraph before you get to the table of contents, "It was found that the explant sample showed significantly less signal for the antioxidants as compared to the control sample, under 2 percent for Santonox R and dilauryl thiodipropionate."  A. That's right.  Q. What does that mean?  A. That means that 98 percent of it was gone.  Q. Got it.
2 3 4 5 6 7 8 9 10 11 12 13 14	the explant sample was observed to propagate in a direction perpendicular to the fiber draw direction. It was noted to be primarily on the fiber surface."  That's the same finding that you made for Carolyn Lewis?  A. Yes, that will be reflected in the photos, SEM graphs.  Q. "Analysis" I'm down in next paragraph now "analysis of the explanted fiber mesh by GPC-HT indicated that large scale molecular weight degradation had not occurred in the samples."  The same finding that you had in	2 3 4 5 6 7 8 9 10 11 12 13	something like that.  Q. Last sentence of the last paragraph before you get to the table of contents, "It was found that the explant sample showed significantly less signal for the antioxidants as compared to the control sample, under 2 percent for Santonox R and dilauryl thiodipropionate."  A. That's right. Q. What does that mean? A. That means that 98 percent of it was gone. Q. Got it. A. This time we know for a fact, because
2 3 4 5 6 7 8 9 10 11 12 13 14 15	the explant sample was observed to propagate in a direction perpendicular to the fiber draw direction. It was noted to be primarily on the fiber surface."  That's the same finding that you made for Carolyn Lewis?  A. Yes, that will be reflected in the photos, SEM graphs.  Q. "Analysis" I'm down in next paragraph now "analysis of the explanted fiber mesh by GPC-HT indicated that large scale molecular weight degradation had not occurred in the samples."  The same finding that you had in Carolyn Lewis?	2 3 4 5 6 7 8 9 10 11 12 13 14 15	something like that.  Q. Last sentence of the last paragraph before you get to the table of contents, "It was found that the explant sample showed significantly less signal for the antioxidants as compared to the control sample, under 2 percent for Santonox R and dilauryl thiodipropionate."  A. That's right.  Q. What does that mean?  A. That means that 98 percent of it was gone.  Q. Got it.  A. This time we know for a fact, because the surgery was just performed, that it wasn't
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	the explant sample was observed to propagate in a direction perpendicular to the fiber draw direction. It was noted to be primarily on the fiber surface."  That's the same finding that you made for Carolyn Lewis?  A. Yes, that will be reflected in the photos, SEM graphs.  Q. "Analysis" I'm down in next paragraph now "analysis of the explanted fiber mesh by GPC-HT indicated that large scale molecular weight degradation had not occurred in the samples."  The same finding that you had in Carolyn Lewis?  A. Absolutely.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	something like that.  Q. Last sentence of the last paragraph before you get to the table of contents, "It was found that the explant sample showed significantly less signal for the antioxidants as compared to the control sample, under 2 percent for Santonox R and dilauryl thiodipropionate."  A. That's right. Q. What does that mean? A. That means that 98 percent of it was gone. Q. Got it. A. This time we know for a fact, because the surgery was just performed, that it wasn't sitting in Steelgate for months.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	the explant sample was observed to propagate in a direction perpendicular to the fiber draw direction. It was noted to be primarily on the fiber surface."  That's the same finding that you made for Carolyn Lewis?  A. Yes, that will be reflected in the photos, SEM graphs.  Q. "Analysis" I'm down in next paragraph now "analysis of the explanted fiber mesh by GPC-HT indicated that large scale molecular weight degradation had not occurred in the samples."  The same finding that you had in Carolyn Lewis?  A. Absolutely.  Q. And when you say "large scale," the	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	something like that.  Q. Last sentence of the last paragraph before you get to the table of contents, "It was found that the explant sample showed significantly less signal for the antioxidants as compared to the control sample, under 2 percent for Santonox R and dilauryl thiodipropionate."  A. That's right. Q. What does that mean? A. That means that 98 percent of it was gone. Q. Got it. A. This time we know for a fact, because the surgery was just performed, that it wasn't sitting in Steelgate for months. Q. Okay.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	the explant sample was observed to propagate in a direction perpendicular to the fiber draw direction. It was noted to be primarily on the fiber surface."  That's the same finding that you made for Carolyn Lewis?  A. Yes, that will be reflected in the photos, SEM graphs.  Q. "Analysis" I'm down in next paragraph now "analysis of the explanted fiber mesh by GPC-HT indicated that large scale molecular weight degradation had not occurred in the samples."  The same finding that you had in Carolyn Lewis?  A. Absolutely.  Q. And when you say "large scale," the fact of the matter is you found no significant	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	something like that.  Q. Last sentence of the last paragraph before you get to the table of contents, "It was found that the explant sample showed significantly less signal for the antioxidants as compared to the control sample, under 2 percent for Santonox R and dilauryl thiodipropionate."  A. That's right.  Q. What does that mean?  A. That means that 98 percent of it was gone.  Q. Got it.  A. This time we know for a fact, because the surgery was just performed, that it wasn't sitting in Steelgate for months.  Q. Okay.  A. Because it was the surgery was
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	the explant sample was observed to propagate in a direction perpendicular to the fiber draw direction. It was noted to be primarily on the fiber surface."  That's the same finding that you made for Carolyn Lewis?  A. Yes, that will be reflected in the photos, SEM graphs.  Q. "Analysis" I'm down in next paragraph now "analysis of the explanted fiber mesh by GPC-HT indicated that large scale molecular weight degradation had not occurred in the samples."  The same finding that you had in Carolyn Lewis?  A. Absolutely.  Q. And when you say "large scale," the fact of the matter is you found no significant change in molecular weight; true?	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	something like that.  Q. Last sentence of the last paragraph before you get to the table of contents, "It was found that the explant sample showed significantly less signal for the antioxidants as compared to the control sample, under 2 percent for Santonox R and dilauryl thiodipropionate."  A. That's right. Q. What does that mean? A. That means that 98 percent of it was gone. Q. Got it. A. This time we know for a fact, because the surgery was just performed, that it wasn't sitting in Steelgate for months. Q. Okay. A. Because it was the surgery was performed, and it was immediately forwarded to
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	the explant sample was observed to propagate in a direction perpendicular to the fiber draw direction. It was noted to be primarily on the fiber surface."  That's the same finding that you made for Carolyn Lewis?  A. Yes, that will be reflected in the photos, SEM graphs.  Q. "Analysis" I'm down in next paragraph now "analysis of the explanted fiber mesh by GPC-HT indicated that large scale molecular weight degradation had not occurred in the samples."  The same finding that you had in Carolyn Lewis?  A. Absolutely.  Q. And when you say "large scale," the fact of the matter is you found no significant change in molecular weight; true?  A. In this sample we didn't see a change	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	something like that.  Q. Last sentence of the last paragraph before you get to the table of contents, "It was found that the explant sample showed significantly less signal for the antioxidants as compared to the control sample, under 2 percent for Santonox R and dilauryl thiodipropionate."  A. That's right. Q. What does that mean? A. That means that 98 percent of it was gone. Q. Got it. A. This time we know for a fact, because the surgery was just performed, that it wasn't sitting in Steelgate for months. Q. Okay. A. Because it was the surgery was performed, and it was immediately forwarded to us as rapidly as possible. So it would have
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	the explant sample was observed to propagate in a direction perpendicular to the fiber draw direction. It was noted to be primarily on the fiber surface."  That's the same finding that you made for Carolyn Lewis?  A. Yes, that will be reflected in the photos, SEM graphs.  Q. "Analysis" I'm down in next paragraph now "analysis of the explanted fiber mesh by GPC-HT indicated that large scale molecular weight degradation had not occurred in the samples."  The same finding that you had in Carolyn Lewis?  A. Absolutely.  Q. And when you say "large scale," the fact of the matter is you found no significant change in molecular weight; true?  A. In this sample we didn't see a change in the oh, molecular weight you're saying?	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	something like that.  Q. Last sentence of the last paragraph before you get to the table of contents, "It was found that the explant sample showed significantly less signal for the antioxidants as compared to the control sample, under 2 percent for Santonox R and dilauryl thiodipropionate."  A. That's right. Q. What does that mean? A. That means that 98 percent of it was gone. Q. Got it. A. This time we know for a fact, because the surgery was just performed, that it wasn't sitting in Steelgate for months. Q. Okay. A. Because it was the surgery was performed, and it was immediately forwarded to us as rapidly as possible. So it would have just been a matter of days at room temperature
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	the explant sample was observed to propagate in a direction perpendicular to the fiber draw direction. It was noted to be primarily on the fiber surface."  That's the same finding that you made for Carolyn Lewis?  A. Yes, that will be reflected in the photos, SEM graphs.  Q. "Analysis" I'm down in next paragraph now "analysis of the explanted fiber mesh by GPC-HT indicated that large scale molecular weight degradation had not occurred in the samples."  The same finding that you had in Carolyn Lewis?  A. Absolutely.  Q. And when you say "large scale," the fact of the matter is you found no significant change in molecular weight; true?  A. In this sample we didn't see a change in the oh, molecular weight you're saying?  Q. Yes.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	something like that.  Q. Last sentence of the last paragraph before you get to the table of contents, "It was found that the explant sample showed significantly less signal for the antioxidants as compared to the control sample, under 2 percent for Santonox R and dilauryl thiodipropionate."  A. That's right.  Q. What does that mean?  A. That means that 98 percent of it was gone.  Q. Got it.  A. This time we know for a fact, because the surgery was just performed, that it wasn't sitting in Steelgate for months.  Q. Okay.  A. Because it was the surgery was performed, and it was immediately forwarded to us as rapidly as possible. So it would have just been a matter of days at room temperature before we got it and could start our work, as
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	the explant sample was observed to propagate in a direction perpendicular to the fiber draw direction. It was noted to be primarily on the fiber surface."  That's the same finding that you made for Carolyn Lewis?  A. Yes, that will be reflected in the photos, SEM graphs.  Q. "Analysis" I'm down in next paragraph now "analysis of the explanted fiber mesh by GPC-HT indicated that large scale molecular weight degradation had not occurred in the samples."  The same finding that you had in Carolyn Lewis?  A. Absolutely.  Q. And when you say "large scale," the fact of the matter is you found no significant change in molecular weight; true?  A. In this sample we didn't see a change in the oh, molecular weight you're saying?  Q. Yes.  A. No, no change in molecular weight.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	something like that.  Q. Last sentence of the last paragraph before you get to the table of contents, "It was found that the explant sample showed significantly less signal for the antioxidants as compared to the control sample, under 2 percent for Santonox R and dilauryl thiodipropionate."  A. That's right.  Q. What does that mean?  A. That means that 98 percent of it was gone.  Q. Got it.  A. This time we know for a fact, because the surgery was just performed, that it wasn't sitting in Steelgate for months.  Q. Okay.  A. Because it was the surgery was performed, and it was immediately forwarded to us as rapidly as possible. So it would have just been a matter of days at room temperature before we got it and could start our work, as opposed to I really didn't know how long the
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	the explant sample was observed to propagate in a direction perpendicular to the fiber draw direction. It was noted to be primarily on the fiber surface."  That's the same finding that you made for Carolyn Lewis?  A. Yes, that will be reflected in the photos, SEM graphs.  Q. 2	Q. Do you know the percentage of	2	the lab notebooks?
3	formaldehyde in which the material was stored?	3	A. Lab notebooks.
4	A. I do not.	4	Q. And billings?
5	Q. Did you follow the same sample	5	A. Billings.
6	preparation methods we've described?	6	Q. Do you know the answer to the question
7	A. Yes, in terms of removal of tissue and	7	about why Page 6 shows in Table 1 the control
8	using forceps and disposable	8	sample analysis chart is different than it is in
9	Q. Why did you choose the control samples	9	Carolyn Lewis which appears on Page 13?
10	that you did in Table 1 on Page 6? Is that the	10	A. I'd have to refer to the lab
11		11	
12	same ones that you chose before?	12	notebooks. Maybe it's in the lab notebooks. Do
13	A. Same ones, yes.	13	you want me to do that?
	Q. The reason why I asked is because		Q. Well, to the extent that there's other
14	Table 1 on Page 13 shows a number of additional	14	testing well, strike that. We'll come back
15	tests being conducted on the other controls.	15	to that.
16	A. On page what?	16	Look at your lab notebooks and see if
17	Q. Right here. Compare this chart to	17	you did new testing.
18	this chart. They should be the same, shouldn't	18	A. Let's see. That would have had to
19	they?	19	have been
20	MR. ANDERSON: Yes, they are.	20	MR. ANDERSON: That's the old ones.
21	MR. THOMAS: Right here. All this	21	(Witness reviewing documents.)
22	data is not on this chart.	22	A. 10/29.
23	MR. ANDERSON: Oh, the data, I thought	23	MR. ANDERSON: Here you go. This is
24	you said the tests that were run.	24	Batiste.
25	A. They weren't. That means that these	25	A. Scalpel yeah, that's Batiste.
	Page 219		Page 221
1	were run again. And the rest of these were not	1	MR. ANDERSON: You're looking to see
2	run again.	2	about the OM and SEM, I think.
3	BY MR. THOMAS:	3	MR. THOMAS: The reason why the
4	Q. So	4	difference of charts.
5	A. We did another FTIR micro, we did	5	MR. ANDERSON: Yes.
6	another DSC, another GPCT.	6	(Witness reviewing documents.)
7	Q. Does this mean you repeated the test	7	A. So this is all Batiste. There's no
8	for the first two categories, the OM and the	8	indication of any reruns of those standards, of
9	SEM?	9	the controls in here, so
10	A. I need to see the billing.	10	BY MR. THOMAS:
11	Q. How much of this testing did you do	11	Q. Is it just an omission?
12	yourself; any of it?	12	A. I think it may just be an omission.
13	A. I don't these days I don't do much	13	Q. Okay.
14	myself. I just supervise the lab personnel.	14	A. 3422128.
15	Q. Is it fair to understand that for both	15	Yeah, I think X is up here, that's
16	Linda Batiste and Carolyn Lewis that others did	16	correct. I think it's an omission. We'll have
17	the work for you and reported to you and	17	to correct the table.
18	prepared your report, and you're testifying	18	Q. Okay.
19	based on other	19	A. It would have been the same data.
20	A. I prepared the report. They gave me	20	Q. Do you remember, given that this
21	their individual results.	21	report is dated today
22	Q. Okay. And you are preparing the	22	A. I'll tell you what we can do. We can
23	report and testifying based on the work of	23	pick a control sample here and just see if the
24 25	others?	24	picture is identical.
	A. Correct.	25	Q. Okay.

56 (Pages 218 to 221)

	Page 222		Page 224
1	A. That will be a good indication.	1	now any findings different for Linda Batiste
2	I'm sorry, can we go off the record a	2	about your observations of the mesh?
3	second?	3	A. Anything different?
4	MR. ANDERSON: We don't have to go off	4	Q. From what you found with Carolyn
5	the record. Just don't talk while you're	5	Lewis.
6	looking.	6	A. Oh, sure, we've already specified one
7	(Witness reviewing document.)	7	difference. The DSC didn't show
8	A. That picture looks identical, Figure 4	8	Q. That was a bad question.
9	looks identical to Figure 5 here, which is the	9	A the decreased Delta H.
10	same control.	10	Q. Let me start over again. Strike that.
11	BY MR. THOMAS:	11	I better do it the right way.
12	Q. Just for the record, you're referring	12	Let's go to Page 8 excuse me. I'm
13	to Exhibit Number 1, Page 20, Figure 4, to	13	sorry. Page 14, Figure 8.
14	Exhibit Number 2, Page 12, Figure 5?	14	In a number of places in Exhibits 1
15	A. Right.	15	and 2 there will be figures with numbers that
16	Q. So it's your best judgment, based upon	16	are shown on there. Here on Figure 8 there's
17	your review of those documents, that you're	17	Figures 1, 2, 3 and 4 in red on the mesh.
18	using the same control information for both	18	Do these represent places where, what,
19	studies?	19	scanning electron microscopy was conducted, or
20	A. Here would be a more definitive	20	do you know?
21	picture.	21	A. I don't know.
22	MR. ANDERSON: Just answer his	22	Q. So like on the next page, on Page 15,
23	question.	23	Figure 10, there are red numbers 1, 2, 3, 4. Do
24	A. I'm sorry.	24	you know what those represent?
25	BY MR. THOMAS:	25	A. Well, I can look at the EDX and see if
	Page 223		Page 225
1	Q. So it's your best judgment, based upon	1	the numbers if we have four sites on EDX,
2	your review of those documents, you're using the	2	that would be the likely if there's going to
3	same control information for both studies?	3	be any correlation, that's what it would be, go
4	A. It looks that way. 159, you see	4	find this sample number.
5	MR. ANDERSON: Do you feel like you've	5	Q. When you say "EDX," the data that you
6	answered his question that you're using the same	6	have in your EDX analysis?
7	controls?	7	A. Yeah. But I don't know, with a
8	THE WITNESS: Yes.	8	control like this, I don't know why that would
9	MR. ANDERSON: Okay. Then we'll move	9	it would make no sense, so I doubt it. But
10	on to the next one.	10	we can check one sample.
11	BY MR. THOMAS:	11	Q. Check to make sure.
12	Q. Now if you go to Page 9, Page 9,	12	A. 13161.
13	Figure 3, does this depict the Batiste mesh as	13	It's not here. I don't know what it
14	first received by you and then separated into	14	means.
15	tissue and mesh as you did with the mesh in	15	Q. Okay. And just so we're clear, if you
16	Carolyn Lewis?	16	go back to Carolyn Lewis, let's go to Page 24 of
17 18	A. It does.	17	Carolyn Lewis. Figure 11, again samples 13162,
	Q. And did you follow the same	18	and there are numbers in red, 1, 2, 3, 4, do you know what those represent?
	procedures?		
19	procedures?	19	*
19 20	A. We did.	20	A. No, I do not.
19 20 21	A. We did. Q. And did Mr	20 21	<ul><li>A. No, I do not.</li><li>Q. Okay. If you go to Page 18, please,</li></ul>
19 20 21 22	<ul><li>A. We did.</li><li>Q. And did Mr</li><li>A. Adi Kulcarni. Yes, I watched him do</li></ul>	20 21 22	A. No, I do not. Q. Okay. If you go to Page 18, please, of Batiste, Exhibit 2, Figure 16. Is this the
19 20 21 22 23	A. We did. Q. And did Mr A. Adi Kulcarni. Yes, I watched him do it.	20 21 22 23	A. No, I do not. Q. Okay. If you go to Page 18, please, of Batiste, Exhibit 2, Figure 16. Is this the photograph strike that.
19 20 21 22	<ul><li>A. We did.</li><li>Q. And did Mr</li><li>A. Adi Kulcarni. Yes, I watched him do</li></ul>	20 21 22	A. No, I do not. Q. Okay. If you go to Page 18, please, of Batiste, Exhibit 2, Figure 16. Is this the

57 (Pages 222 to 225)

1 Exhibit Number 1 as not cracked, moderately 2 cracked, or cracked, where does this fit? 3 A. These photos here I would call 4 severely cracked. 4 severely cracked. 5 Q. Considerably cracked? 6 A. Considerably or severely, you could 7 use either word. 8 Q. Okay. Let me ask this question. 9 You've used a number of different ways 10 today to characterize the cracking that you've 11 seen, and you've broken them down into 12 categories in different places in your report. 13 What categories of cracking do you 14 deem to be relevant to your analysis on a 15 comparative basis across these mesh? 16 MR. ANDERSON: Objection. Asked and 17 answered way long ago. 18 But answer the question again. 19 A. Minimally, not cracked, minimally, 10 Is cracked more than the 411 sample. 2 Q. So on Page 38, sample 13412, you describe as being moderately cracked. 4 What is it about Exhibit 40 on Page 38 of Exhibit Number I that qualifies that as moderately cracked? 7 A. Particularly on the right side of the picture, the cracks are somewhat weak looking, they're not deep into the sample. Now, there are a couple of places there, this is what makes this so difficult, there are a couple of places on the left side where I would call it certainly more severe 14 deem to be relevant to your analysis on a 15 comparative basis across these mesh? 15 represent a large portion of the surface. Q. So the cracks that you're referring to are less than a micron in width? A. Scale is 100-micron, yes, in that order.		Page 226		Page 228
2 A. Photograph of not the SEM, but just a regular optical microscope of the fiber mesh with tissue imbedded in it.  Q. And with tissue imbedded in it. Q. And was mphification SEM. Q. Of the same thing that's depicted in Figure -	1	O What is that?	1	show you that one a while ago in the other set
regular optical microscope of the fiber mesh with tissue imbedded in it.  Q. And what is Figure 17? A. That's a low amplification SEM. Figure Q. Of the same thing that's depicted in Figure 17 the Is what's depicted in Figure 17 the Is what's depicted in Figure 16, just by different medium?  A. Ry different methods. C. Methods. A. SEM versus optical. C. A. SEM versus optical. C. A. Al looks like greatly cracked material where some of the material has actually flaked me. C. In your description that you used in Fagure 22 on In your description that you used in C. Considerably cracked, or cracked, where does this fit? C. Considerably or severely, you could use either word. C. Considerably or severely, you could use either word. C. Okay. Let me ask this question. You've used a number of different ways today to characterize the cracking that you've seem to be relevant to your analysis on a comparative basis across these mesh? Comparative basis across these mesh? A. Minimally, not cracked, minimally, A. Seale is 100-micron, yes, in that order.  J. A. That's in Exhibit 1. A. I think it was 411. Yes, 411. That's minimally, A. It link it was 411. Yes, 411. That's minimally, A. It link it was 411. Yes, 411. That's minimally, A. It link it was 411. Yes, 411. That's minimally, A. It link it was 411. Yes, 411. That's minimally, A. It link it was 411. Yes, 411. That's minimally, A. A. That's in Exhibit 1. A. It link it was 411. Yes, 411. That's minimally, A. A. That's in Exhibit 1. A. That's in Exhibit 1. A. It link it was 411. Yes, 411. That's minimally, A. A. That's in Exhibit 1. A. That's in Exhibit 1. A. It link it was 411. Yes, 411. That's minimally, A. A. That minimally. A. It link it was 411. Yes, 411. That's minimally. A. A. That minimally. A. That's in Exhibit 1. A. It link it was 411. Yes,				
with tissue imbedded in it. Q. And what is Figure 17? A. Thar's a low amplification SEM. Q. Of the same thing that's depicted in Figure 17 the same thing that's depicted in Figure 16, just by different medium? A. By different methods. Q. Methods. A. By different methods. Q. And a you look at Figure 22 on Page 21, and Figure 23, how would you describe what you see in Figure 22? A. It looks like greatly cracked material where some of the material has actually flaked off, getting clear under regions underneath. Q. In your cast of characters — excuse me. In your description that you used in  Page 217  Exhibit Number 1 as not cracked, moderately cracked, or cracked, where does this fit? A. Considerably cracked? A. Considerably cracked or cracked, where does this fit? A. Considerably cracked? A. Think it was 411. Yes, 411. That's minimally. A. It link it was 411. Yes, 411. That's minimally. A. It link it was 411. Yes, 411. That's minimally. A. It link it was 411. Yes, 411. That's minimally. A. It link it was 411. Yes, 411. That's minimally. A. That's in Exhibit 1. And that's your visual observations, you conclude that the cracking shown on Page 37 fair? A. Fair. A. Fair. A. That might be moderately cracked? A. These are arbitrary categories, of course, that's why it's very difficult to put absolute numbers on these. But that certainly describe as being moderately cracked? A. Particularly on the right side of the picture				
5 Q. And what is Figure 17? A. That's a low amplification SEM. O. Of the same thing that's depicted in Figure Figure A. Right. O. Excuse me. Is what's depicted in Figure 16, just by different medium? A. By different methods. A. SEM versus optical. O. And as you look at Figure 22 on Page 21, and Figure 23, how would you describe what you see in Figure 22? A. It looks like greatly cracked material where some of the material has actually flaked off, getting clear under regions underneath. Description that you used in  Page 227  Exhibit Number 1 as not cracked, moderately cracked, or cracked, where does this fit? A. Considerably cracked? A. Considerably or severely, you could use either word. O. Okay. Let me ask this question. You've used a number of different ways today to characterize the cracking thay ou've seen to day to characterize the cracking do you deem to be relevant to your analysis on a comparative basis across these mesh? A. Minimally, not cracked, minimally, A. Minimally, not cracked, minimally,  Seen and what is Figure 2 in A. A. A. It hink it was 411. Yes, 411. That's minimally. A. It hink it was 411. Yes, 411. That's minimally. A. It hink it was 411. Yes, 411. That's minimally. A. A. That's in Exhibit 1. And that's your visual observations, you conclude that the cracking shown on Page 37 in Figure 38, sample 13411, is minimal cracking; fair? A. Fair. Q. All right. What is in was 411. Yes, 411. That's minimally. A. That's exactly right. A. That's exactly right. A. That's mactly your voucled that the cracking shown on Page 37 in Figure 38, sample 13411, is minimal cracking; fair? A. Fair. Q. All right. What is in was 411. Yes, 411. That's minimally. A. That's exactly right. A. That's mathat's pour veraked on the fair of the functions, you conclude that the cracking shown on Page 37 in Figure 38, sample 13411, is minimally and indicating. A. That might be moderate right th				
6 Å. That's a low amplification SEM. 7 Q. Of the same thing that's depicted in Figure - 8 9 Figure - 8 10 Q. Excuse me. 10 11 Is what's depicted in Figure 17 the same thing that's depicted in Figure 16, just by different medium? 13 12 different medium? 13 13 different medium? 14 14 A. By different methods. 15 15 Q. Methods. 16 16 A. SEM versus optical. 16 17 Q. And as you look at Figure 22 on 19 18 Page 21, and Figure 23, how would you describe what you see in Figure 22? 19 20 A. It looks like greatly cracked material where some of the material has actually flaked 21 23 where some of the material has actually flaked 22 off, getting clear under regions underneath. 23 24 me. 24 me. 24 25 In your cast of characters - excuse 24 me. 24 25 Exhibit Number 1 as not cracked, moderately 27 26 A. That's in Exhibit 1. And that's your visual observations, you conclude that the cracking shown on Page 37 in Figure 38, sample 13411, is minimal cracking; fair?  A. Fair. Q. All right. What is moderately cracked?  A. That might was 41. Yes, 411. That's minimally. 20 Q. That's in Exhibit 1.  And that's your visual observations, you conclude that the cracking shown on Page 37 in Figure 38, sample 13411, is minimal cracking; fair?  A. Fair. Q. All right. What is moderately cracked?  A. That might was 41. Yes, 411. That's minimally.  A off that's your visual observations, you conclude that the cracking shown on Page 37 in Figure 38, sample 13411, is minimal cracking; fair?  A. Fair. Q. All right. What is moderately cracked?  A. That might was 41. Yes, 411. That's minimally.				
7			l .	
Figure				
A. Right.  Q. Excuse me.  Is what's depicted in Figure 17 the same thing that's depicted in Figure 16, just by different medium?  A. By different methods.  Q. Methods.  Q. Methods.  Q. And as you look at Figure 22 on Page 21, and Figure 23, how would you describe what you see in Figure 22?  A. It looks like greatly cracked material where some of the material has actually flaked off, getting clear under regions underneath.  Q. In your cast of characters — excuse me.  In your description that you used in  Page 227  Exhibit Number 1 as not cracked, moderately cracked, or cracked, where does this fit?  A. These photos here I would call severely cracked.  Q. Considerably cracked?  A. Considerably cracked.  Q. Okay. Let me ask this question.  You've used a number of different ways today to characterize the cracking that you've seen, and you've broken them down into categories in different places in your report.  What categories of cracking do you describe answered way long ago.  But answer the question again.  A. Minimally, not cracked, minimally,  A. Minimally, not cracked, minimally,  Q. So on Page 38, sample 13411, is minimal cracking; fair?  A. Fair.  A. That is in Exhibit 1.  And that's your visual observations, you conclude that the cracking shown on Page 37 in Figure 38, sample 13411, is minimal cracking; fair?  A. Fair.  A. That might be moderately cracked?  A. That might be moderate right there (indicating).  Q. What page?  A. These are arbitrary categories, of course, that's why it's very difficult to put absolute numbers on these. But that certainly on the right side of the picture, the cracks are somewhat weak looking, they re not deep into the sample.  Now, there are a couple of places on the left side where I would call it certainly more severe cracking, what they're not — they don't represent a large portion of the surface.  Q. So the cracks that you're referring to are less than a micron in width?  A. Scale is 100-micron, yes, in that order.				
10   Q. Excuse me.   10   Q. That's in Exhibit 1.			l .	- 1
Is what's depicted in Figure 16, just by different medium? A. By different methods. Q. Methods. A. SEM versus optical. Q. And as you look at Figure 22 on Page 21, and Figure 23, how would you describe what you see in Figure 22? A. It looks like greatly cracked material where some of the material has actually flaked off, getting clear under regions underneath. Q. In your description that you used in  Page 227  Exhibit Number 1 as not cracked, moderately cracked, or cracked, or cracked, where does this fit? A. These photos here I would call severely cracked. A. Considerably cracked? A. Considerably or severely, you could use either word. Q. Okay. Let me ask this question. You've used a number of different ways today to characterize the cracking that you've seen, and you've broken them down into categories in different places in your report. What categories of cracking do you deem to be relevant to your analysis on a comparative basis across these mesh? MR. ANDERSON: Objection. Asked and answered way long ago.  But answer the question again. A. Miniminally, not cracked, minimally,				
same thing that's depicted in Figure 16, just by different medium?  A. By different methods.  Q. Methods.  A. SEM versus optical. Q. And as you look at Figure 22 on lawhay ou see in Figure 23, how would you describe what you see in Figure 23, how would you describe what you see in Figure 22, how would you describe what you see in Figure 23, how would you describe what you see in Figure 23, how would you describe what you see in Figure 23, how would you describe what you see in Figure 22, how would you describe what you see in Figure 22, how would you describe what you see in Figure 22, how would you describe what you see in Figure 22, how would you describe what you see in Figure 23, how would you describe what you see in Figure 22 on lawhay you see in Figure 23, how would you describe what you see in Figure 22 on lawhay sould figure 23, how would you describe what you see in Figure 22 on lawhay ou see in Figure 23, how would you describe what you see in Figure 23, how would you describe what you see in Figure 23, how would you describe what you see in Figure 23, how would you describe lawhay ou see in Figure 23, how would you describe lawhay ou see in Figure 23, how would you describe lawhay ou see in Figure 23, how would you describe lawhay ou see in Figure 23, how hat is importance (indicating).  Q. What page? A. These are arbitrary categories, of course, that's why it's very difficult to put absolute numbers on these. But that certainly labelly there lawhay it's very difficult to put absolute numbers on these. But that certainly labelly there lawhay it's very difficult to put absolute numbers on these. But that certainly labelly there lawhay it's very difficult to put absolute numbers on these. But that certainly labelly there lawhay it's very difficult to put absolute numbers on these. But that certainly labelly there lawhay it is regure 22. A. These are arbitrary categories, of course, that's why it's very difficult to put absolute numbers on these. But that deal of lawhay it is cracked more than the 411			l .	
different medium?  A. By different methods.  A. By different methods.  A. SEM versus optical.  Q. And as you look at Figure 22 on Page 21, and Figure 23, how would you describe what you see in Figure 22?  A. It looks like greatly cracked material where some of the material has actually flaked off, getting clear under regions underneath. Q. In your cast of characters excuse me.  Difficult to put begin absolute numbers on these. But that certainly  Page 227  Exhibit Number 1 as not cracked, moderately cracked, or cracked, where does this fit? A. These photos here I would call severely cracked.  A. These photos here I would call severely cracked.  Q. Considerably cracked? A. Considerably or severely, you could use either word.  Q. Okay. Let me ask this question. You've used a number of different ways today to characterize the cracking that you've seen, and you've broken them down into categories in different places in your report. What categories of cracking do you deem to be relevant to your analysis on a comparative basis across these mesh? MR. ANDERSON: Objection. Asked and answered way long ago.  In gu fair? A. Fair. A. Fair. A. That might be moderately cracked. A. That might be moderately cracked. A. That might be moderate right there (indicating).  Q. What page? A. These are arbitrary categories, of course, that's why it's very difficult to put absolute numbers on these. But that certainly  Page 227  Page 227  Page 24  is cracked more than the 411 sample. Q. So on Page 38, sample 13412, you describe as being moderately cracked. What is it about Exhibit 40 on Page 38 of Exhibit Number 1 that qualifies that as moderately cracked? A. Particularly on the right side of the picture, the cracks are somewhat weak looking, they're not deep into the sample.  Now, there are a couple of places on the left side where I would call it certainly more severe cracking, what they're not deep into the sample.  Now, there are a couple of places on the left side where I would call it certainly more severe cracking that they're				
14 A. By different methods. 15 Q. Methods. 16 A. SEM versus optical. 17 Q. And as you look at Figure 22 on 18 Page 21, and Figure 22? 19 what you see in Figure 22? 20 A. It looks like greatly cracked material 21 where some of the material has actually flaked 22 off, getting clear under regions underneath. 23 Q. In your cast of characters excuse 24 me. 25 In your description that you used in  Page 227  Exhibit Number 1 as not cracked, moderately 21 cracked, or cracked, where does this fit? 22 cracked, or cracked, where does this fit? 23 A. These photos here I would call 24 seeverly cracked. 25 Q. Considerably cracked? 26 A. Considerably or severely, you could 27 use either word. 28 Q. Okay. Let me ask this question. 29 You've used a number of different ways 20 today to characterize the cracking that you've 21 seen, and you've broken them down into categories in different places in your report. 29 MR. ANDERSON: Objection. Asked and answered way long ago. 20 Mat page? 21 A. 38. 22 Q. Page 38. Are we in Exhibit 1? 23 A. These are arbitrary categories, of course, that's why it's very difficult to put absolute numbers on these. But that certainly 29 Page 227 20 So on Page 38, sample 13412, you describe as being moderately cracked. 30 G. Stabilit Number 1 that qualifies that as moderately cracked? 41 Mat is it about Exhibit 40 on Page 38 of Exhibit Number 1 that qualifies that as moderately cracked? 42 National page 20 Considerably cracked? 43 D. Considerably cracked? 44 Stability Number 1 that qualifies that as moderately cracked? 55 D. Okay. Let me ask this question. 56 Page 227 57 Page 227 58 Page 227 69 Page 38. Are we in Exhibit 1? 60 Page 38 A. These are arbitrary categories, of course, that's why it's very difficult to put absolute numbers on these. But that certainly be described as being moderately cracked. 60 Page 38 Of Exhibit Number 1 that qualifies that as moderately cracked? 61 Page 227 61 Exhibit Number 1 that qualifies that as moderately cracked? 62 Page 38 Page 29 Page 38 Page 20 Page 38 Page 20 Pa				
15 Q. Methods. 16 A. SEM versus optical. 17 Q. And as you look at Figure 22 on 18 Page 21, and Figure 23, how would you describe 19 what you see in Figure 22? 20 A. It looks like greatly cracked material 21 where some of the material has actually flaked 22 off, getting clear under regions underneath. 23 Q. In your cast of characters excuse 24 me. 25 In your description that you used in  Page 227  1 Exhibit Number 1 as not cracked, moderately 2 cracked, or cracked, where does this fit? 3 A. These photos here I would call 4 severely cracked. 4 Severely cracked. 5 Q. Considerably or severely, you could 6 A. Considerably or severely, you could 7 use either word. 9 Q. Okay. Let me ask this question. 9 You've used a number of different ways 10 today to characterize the cracking that you've 11 seen, and you've broken them down into 12 categories in different places in your report. 13 What categories of cracking do you 14 deem to be relevant to your analysis on a 15 Comparative basis across these mesh? 16 MR. ANDERSON: Objection. Asked and answered way long ago.  But answer the question again. 19 A. Minimally, not cracked, minimally, 19 A. Minimally, not cracked, material 20 Q. A. That might. What is moderately cracked? A. That might be moderate right there (indicating). A. That might be moderate right there (indicating). A. These are arbitrary categories, of course, that's why it's very difficult to put absolute numbers on these. But that certainly  Page 227  1 is cracked more than the 411 sample. 2 Q. So on Page 38, sample 13412, you describe as being moderately cracked. 4 What is it about Exhibit 40 on Page 38 of Exhibit Number 1 that qualifies that as moderately cracked? A. Particularly on the right side of the picture, the cracks are somewhat weak looking, they're not deep into the sample. Now, there are a couple of places on the left side where I would call it certainly more severe cracking, what they're not they don't represent a large portion of the surface. Q. So the cracks that you're referring to are l				
16				
17 Q. And as you look at Figure 22 on 18 Page 21, and Figure 23, how would you describe 19 what you see in Figure 22? 20 A. It looks like greatly cracked material 21 where some of the material has actually flaked 22 off, getting clear under regions underneath. 23 Q. In your cast of characters excuse 24 me. 25 In your description that you used in  Page 227  1 Exhibit Number 1 as not cracked, moderately 2 cracked, or cracked, where does this fit? 3 A. These photos here I would call 4 severely cracked. 4 severely cracked. 5 Q. Considerably cracked? 6 A. Considerably or severely, you could 1 use either word. 8 Q. Okay. Let me ask this question. 9 You've used a number of different ways 10 today to characterize the cracking that you've 11 seen, and you've broken them down into 12 categories in different places in your report. 13 What categories of cracking do you 14 deem to be relevant to your analysis on a 15 comparative basis across these mesh? 16 MR. ANDERSON: Objection. Asked and 17 answered way long ago. 18 But answer the question again. 19 A. Minimally, not cracked, minimally, 10 cracked? A. That might be moderate right there (indicating). A. That might be moderate right there (indicating). A. That might be moderate right there (indicating). A. Thase are arbitrary categories, of course, that's why it's very difficult to put absolute numbers on these. But that certainly 2 by a course, that's why it's very difficult to put absolute numbers on these. But that certainly 2 course, that's why it's very difficult to put absolute numbers on these. But that certainly 3 describe are are birary categories, of course, that's why it's very difficult to put absolute numbers on these. But that certainly 4 is cracked more than the 411 sample.  Q. So on Page 38, sample 13412, you describe as being moderately cracked.  What is it about Exhibit 40 on Page 38 of Exhibit Number 1 that qualifies that as moderately cracked?  A. Particularly on the right side of the picture, the cracks are somewhat weak looking, they're not deep in				
18 Page 21, and Figure 23, how would you describe what you see in Figure 22? 20 A. It looks like greatly cracked material where some of the material has actually flaked 21 where some of the material has actually flaked 22 off, getting clear under regions underneath. 23 Q. In your cast of characters excuse 24 me. 25 In your description that you used in 25 In your description that you used in 26 In your description that you used in 27 In your description that you used in 28 In your description that you used in 29 In you				
what you see in Figure 22?  A. It looks like greatly cracked material where some of the material has actually flaked off, getting clear under regions underneath.  Q. In your cast of characters excuse me.  In your description that you used in  Page 227  Exhibit Number 1 as not cracked, moderately cracked, or cracked, where does this fit? A. These photos here I would call severely cracked.  A. Considerably cracked? A. Considerably cracked? A. Considerably or severely, you could see either word.  Q. Okay. Let me ask this question. You've used a number of different ways today to characterize the cracking that you've today to characterize the cracking that you've today to characterize the cracking do you deem to be relevant to your analysis on a comparative basis across these mesh?  MR. ANDERSON: Objection. Asked and answered way long ago.  What is it obout Exhibit 1?  A. Minimally, not cracked, material has actually flaked 21. A. 38.  Q. What page? A. 38. A. These are arbitrary categories, of course, that's why it's very difficult to put absolute numbers on these. But that certainly  Page 227  Page 32  A. These are arbitrary categories, of course, that's why it's very difficult to put absolute numbers on these. But that certainly  Page 27  Lexhibit Number 1 as not cracked, moderately cracked more than the 411 sample.  Q. So on Page 38, sample 13412, you describe as being moderately cracked.  What is it about Exhibit 40 on Page 38 of Exhibit Number 1 that qualifies that as moderately cracked?  A. Particularly on the right side of the picture, the cracks are somewhat weak looking, they're not deep into the sample.  Now, there are a couple of places on the left side where I would call it certainly more severe cracking, what they're not they don't represent a large portion of the surface.  Q. So the cracks that you're referring to are less than a micron in width?  A. Scale is 100-micron, yes, in that order.				
A. It looks like greatly cracked material where some of the material has actually flaked off, getting clear under regions underneath.  Q. In your cast of characters — excuse me.  1				
where some of the material has actually flaked off, getting clear under regions underneath.  Q. In your cast of characters excuse me.  In your description that you used in  Page 227  Exhibit Number 1 as not cracked, moderately cracked, or cracked, where does this fit?  A. These photos here I would call severely cracked.  A. Considerably cracked?  A. Considerably or severely, you could use either word.  Q. Okay. Let me ask this question.  You've used a number of different ways today to characterize the cracking that you've seen, and you've broken them down into categories of cracking do you deem to be relevant to your analysis on a comparative basis across these mesh?  MR. ANDERSON: Objection. Asked and answered way long ago.  What is in about Exhibit 1?  A. 38.  Q. Page 38. Are we in Exhibit 1?  A. These are arbitrary categories, of course, that's why it's very difficult to put absolute numbers on these. But that certainly  Page 227  Page 227  Page 227  Page 38. Are we in Exhibit 1?  A. These are arbitrary categories, of course, that's why it's very difficult to put absolute numbers on these. But that certainly what is it about Exhibit 40 on Page 38 of Exhibit Number I that qualifies that as moderately cracked.  What is it about Exhibit 40 on Page 38 of Exhibit Number I that qualifies that as moderately cracked?  A. Particularly on the right side of the picture, the cracks are somewhat weak looking, they're not deep into the sample.  Now, there are a couple of places on the left side where I would call it certainly more severe deem to be relevant to your analysis on a comparative basis across these mesh?  MR. ANDERSON: Objection. Asked and answered way long ago.  But answer the question again.  A. Minimally, not cracked, minimally,  Page 227  A. 2	an average.	2	Q. And that's for severe cracking?
3	Q. Okay.	3	A. Well, it's severe. If I just saw one
4	A. If I look at if I look at Page 20,	4	of those cracks and nothing else and it was
5	I might call it moderate. But if I look at	5	clean everywhere else, like if all I saw was
6	Page 21, these are different regions of the same	6	this
7	sample, I'm going to call that severe, because	7	Q. What you're doing now is you're
8	of flaking.	8	A. I'm covering up the cracks. But I'm
9	Q. Is it the flaking that makes it	9	showing you the rest of the fiber. In this case
10	severe?	10	the whole fiber isn't damaged, just the left
11		11	side.
12	A. Flaking, yeah, because the actual	12	
13	polymer is degraded so badly it's coming off the surface.	13	Q. That's Figure 26?
14		14	A. 22 Figure 25, sorry.
15	Q. All right.	15	Q. Figure 25 on Page 22 of Exhibit 2?
16	A. It's also the depth. If you want to	16	A. Correct.
17	see the depth, Page 23 shows you the deep	17	Q. Okay. Figure 25 on Page 22 of
	cracking that hasn't yet flaked, but you can see		Exhibit 2, the cracks that you see on the left
18	it's just dying to flake off on Page 23.	18	side, again are 1 to 3 microns wide. That's 600
19	Q. Just so the record is clear, that's a	19 20	times magnification, that's even higher?
20	higher magnification than the early ones? It's		A. But you've got the scale here of
21	450 times, right? Page 23 is 400 times, is that	21	Q. You changed the page again on me.
22	right?	22	Which one are you looking at now?
23	A. Yeah. So I would call this moderate	23	A. Page 23, 26.
24 25	to severe. Q. And is it the number of cracks?	24 25	Q. Okay. Figure A. 450X.
23	Page 231	23	A. 450A.  Page 233
1		1	
1	A. Number of cracks, the depth of the	1	Q. Page 23, 450X, Figure 26.
2	cracks, and whether or not it's flaked all enter	2	A. So that crack there on the the big
3	into the flaking tends to	3	crack in the middle of the left side of that
4	Q. How are you able to measure the depth	4	picture looking at the scale has got to be on
5	of the cracks? Or is this just by total	5	the order of
6	eyeballing it?	6	Q. 5 microns?
7	A. It's total eyeballing at this point,	7	A 5-micron, something like that.
8	because you can't really until you see the	8	Q. No way to tell from this how deep it
9	pieces come off, and then they look like they're	9	is?
10	several microns.	10	A. You can tell from the now you can
11	Q. As a practical matter, isn't it	11	tell because it's bent upwards. The actual
12	impossible to measure the depths of these cracks	12	thickness of the polypropylene piece that's
13	because they're so small?	13	about to break off looks like it's 1 to
14	A. Well, to get an accurate measurement,	14	2 microns.
15	right, looking at this photograph I can't tell	15	Q. Okay. But the depth there is not
16	you exactly how many. But the depth is at least	16	going to be any more than five microns?
17	as great, it would appear here, as the width.	17	A. No.
18	Q. So a little less than a micron?	18	Q. Probably less?
19	A. Well, I would say that's more like 2	19	A. On that order, yes.
20	microns, that crack.	20	Q. Okay. So that's severe cracking?
21	Q. Okay.	21	A. Yes, because it runs, covers the
22	A. Some of this one might be 2 to 3,	22	entire
23	some of them are 1. They're variable.	23	Q. Okay. Let's go to Page 29, Figure 33.
24	Q. Okay. And you would expect a similar	24	You're conducting the SEM-EDX analysis
25	depth to that 1 to 3 microns?	25	here, correct?

59 (Pages 230 to 233)

	Page 234		Page 236
1	A. Yes. Correct.	1	this peak here, that's in the region that isn't
2	Q. And how would you describe the	2	cracked.
3	cracking that you see in Figure 33?	3	Q. My question is not what the proof of
4	A. Moderate in that particular piece.	4	it is. My question is what caused it.
5	Q. All right. And Spectrum 2 and	5	What caused the oxidation?
6	Spectrum 3 are shown.	6	A. What caused the oxidation. Well, that
7	Is there a Spectrum 1?	7	would probably be due to the inflammation, among
8	A. No. Usually just shows two pieces, I	8	other things, that's in the human body. If the
9	don't know why we had three on here.	9	material isn't protected by antioxidants and
10	Q. Do you usually start numbering at 2?	10	it's exposed to macrophages and hydrogen
11	A. I don't know why that was done. It's	11	peroxide and so on, if there was inflammation,
12	2, he may have had a 1 somewhere else, or just	12	and shards were coming off the particle and
13	didn't renumber them.	13	inflammation is caused to increase that
14	Q. If there's a 1, it doesn't show up on	14	Q. Are you guessing, or is that your
15	the data that appears here, correct?	15	opinion?
16	A. Right. The box and the number	16	A. That's published literature.
17	correlates with the spectrum you see below.	17	Q. It's your opinion that published
18	Q. Right.	18	literature stands for the proposition that in
19	What's the difference between 34 and	19	the face of inflammation, that polypropylene
20	35?	20	mesh without antioxidants will degrade?
21	A. Just a scale-up.	21	A. Yes.
22	Q. Okay.	22	Q. And what literature is that?
23	A. So we can see the minor elements	23	A. Well, it goes back to
24	better.	24	Q. Is that the Liebert article?
25	Q. I see.	25	A. Liebert article, it goes back to
	Page 235		Page 237
1	DSC, we decided there was no change,	1	Oswald and Turi article, as early as '65.
2	so there's no evidence of environmental stress	2	Q. Okay.
3	cracking?	3	A. Williams talks about it in a number of
4	A. Let me just look at the numbers, but I	4	articles.
5	believe that's correct.	5	Q. It's ultimately premised on the
6	(Witness reviewing document.)	6	suggestion that the antioxidants in the Ethicon
7	A. That's correct.	7	mesh have leached out and are gone, correct?
8	BY MR. THOMAS:	8	A. Correct.
9	Q. So any oxidation that's occurring	9	Q. Right.
10	strike that.	10	And it's only if the antioxidants are
11	So any of the cracks that we see in	11	leached out and gone that your theory is
12	Linda Batiste is going to be due to straight	12	correct?
13	oxidation?	13	A. I don't know that it would mean you
14	A. I believe that's correct.	14	couldn't oxidize polypropylene even in the
15	Q. And do you know what caused the	15	presence of antioxidants. You certainly can. But it retards it.
16 17	oxidation in Linda Batiste's mesh?	16	
18	A. Well, one cause would be the lack of	17	Q. But you've not studied that question.
19	antioxidant in the fiber, if we find that, which	18 19	Your theory and opinion is that the antioxidants
20	we have to go look at the LCMS analysis	20	have leached out, therefore the mesh is
21	primarily.  The other would be the IR results for	21	degraded? That's your opinion to a reasonable degree of certainty?
22	carbonyls to see if we had oxidation there.	22	A. It would be a fact in my mind, because
23	Those are the two primary well, and	23	we're looking at the actual lack thereof.
24	the third is the one I just showed you was EDX.	24	Q. Okay.
	Because that oxygen in the clean regions by EDX,	25	A. Not assuming lack of, I'm looking to
25			

60 (Pages 234 to 237)

Page 238 Page 240 see if we see a lack of. 1 1 paragraph, "After you don't find a difference in 2 2 Q. I understand. molecular weight, the environmental stress 3 3 cracking mechanism does not require a decrease But that's your opinion to a 4 4 reasonable degree of scientific certainty how in molecular weight." 5 this degradation occurred; that is, that the 5 I think we've already decided that the 6 antioxidants leached out leaving the mesh 6 mesh -- any mesh degradation for Ms. Batiste is 7 7 not due to environmental stress cracking; fair? defenseless, and that is the reason why the mesh 8 degraded? 8 A. Right. 9 9 Q. Okay. A. Yes. 10 Q. Page 34 --10 A. So that's why I state we observed 11 A. Yes, sir. cracking in the explant samples due to oxidation 11 12 Q. -- on Exhibit 2. 12 in the fiber surface, in this particular sample. 13 13 This same value is in Exhibit 1, the Q. In the PYMS analysis on Page 34. 14 A. Page 34? 14 typical value for the melt point of 15 polypropylene? 15 Q. I'm sorry, 44. Thank you. 16 16 A. Where are you? A. Okav. 17 Q. I'm right in the middle of the page on 17 Q. Am I correct that there's no analysis 18 18 Page 34. of the Santonox antioxidant? 19 A. 34. Okay. Right. 19 A. Right. 20 Q. Is it your opinion that the typical 20 Q. Why not? value for polypropylene melting is 175 degrees 21 21 A. As I mentioned this morning, in PYMS 22 22 when you -- if you'll look at Page 45, Figure C? 23 23 46, the antioxidants, you'll see a large --A. Again, that comes out of the book we 24 looked at earlier this morning, Turi. 24 you'll see the control is the blue, and you'll 25 Q. Do you know whether that is the 25 see a large red peak righter blue is eluting. Page 239 Page 241 1 typical melt point for the polypropylene mesh 1 What that is mostly is polypropylene fragment 2 that Ethicon manufactured and sold? 2 ions, and it was overwhelming the signal for 3 A. No. We measured, we measured that as 3 Santonox R, so we really couldn't get an 4 well. That's the controls. It's 165-ish. 4 accurate reading. 5 Q. Okay. My point is; you're not 5 Q. Tell me what that means. I don't know 6 how that works. I don't understand. б suggesting because it's 165 instead of 175 from 7 7 the literature that it's more susceptible to A. Well, in LCMS you extract the environmental stress cracking or degradation, 8 8 additives, and then you shoot a solution of the 9 are you? 9 extract, so you don't have the polymer to worry A. I'm suggesting it's less crystalline. 10 about at all. 10 11 Q. Okay. Are you suggesting it's more 11 In PYMS you put the entire sample in, 12 the solid polypropylene piece, or a bit of 12 susceptible to environmental stress cracking 13 because --13 actual fiber, and then you burn it basically, 14 14 A. Than the native pellet polypropylene pyrolize it, and then the pieces go into the GC 15 from which the fiber was manufactured, yes, I 15 system column and get separated. But there are 16 sometimes hundreds of thousands of pieces, and 16 am. 17 sometimes for materials you want to analyze they 17 Q. And are you suggesting that it's more 18 susceptible to oxidation because its melting 18 just get overwhelmed, the material I want to 19 19 point is 165 as opposed to 175 and 80 analyze for is overwhelmed by the background is 20 polypropylene pellets? 20 what it's called. 21 21 A. Yes. So any estimate we would have made Q. Page 43 in your molecular weight 22 22 here, we would have got a large peak, it doesn't 23 analysis. 23 mean anything because it's got all these other 24 ions in it, which just is flooding the system in 24 A. Okay. 25 25 Q. It says in the middle of the that particular time point.

61 (Pages 238 to 241)

1	Page 242		Page 244
	Now, for the other antioxidate, the	1	Q. All right. At this time for the LCMS
2	lauryl thiodipropionate	2	test beginning on Page 46, there's no formalin
3	Q. Let me just interrupt for a minute.	3	control data, is there?
4	Could you have changed your test or	4	A. No.
5	changed your materials to test again for	5	Q. So the tests that you conducted in
6	Santonox in an effort to capture the	6	LCMS would not show the extent to which formalin
7	concentration of Santonox?	7	may have confounded your findings?
8	A. You can run single ion, extracted ion	8	A. For the Santonox R, that would be
9	chromatography, we call it, that helps. In this	9	true. But for the lauryl thiodipropionate, the
10	case it didn't help enough.	10	standards we've already run clearly were not
11	Q. Why does it work in the Carolyn Lewis	11	extracted by the formalin.
12	case for all the samples that you've tested	12	Q. You didn't do a formalin control test
13	there, but doesn't for Linda Batiste?	13	for Linda Batiste to determine the extent to
14	A. Don't have an answer for that. I just	14	which formalin would impact your LCMS findings;
15	know this is characteristic of PYMS. LCMS gives	15	true?
16	in this case because we don't have the	16	A. Well, we did it, but it's in reference
17	background, we don't have the degree of	17	one. Remember we're going to use these data
18	problems.	18	together. Because we already have two formalin
19	Q. Just so I understand	19	controls in the what do you call the
20	A. It doesn't always not work either,	20	Exhibit 1.
21	it's a matter of a judgment call.	21	Q. Okay.
22	Q. But you got PYMS testing and results	22	A. So yes, we have controls of formalin.
23	in all but four of the samples you tested in	23	Q. So whatever
24	Exhibit 1, correct? That's on Page 15 and 16.	24	A. Page 92
25	A. Oh, Exhibit 1?	25	Q whatever conclusions might be drawn
	Page 243		Page 245
1	Q. Yes.	1	from the formalin control samples and their
2	A. Well, I know that one thing that's	2	impact on the antioxidants that may have been
3	happened since this work was done was a column	3	present in the mesh apply equally to your
4	had to be changed out.	4	findings for Linda Batiste?
5	Q. What does that mean?	5	A That's as we at
	A. Well, the column eventually goes, and		A. That's correct.
6		6	Q. Now, the control sample that you
6 7	we have to cycle it out. So another column	6 7	
	is this is not the same column that was run	l .	Q. Now, the control sample that you
7		7	Q. Now, the control sample that you choose here on Page 50 is 3422128, and that will
7 8	is this is not the same column that was run	7 8	Q. Now, the control sample that you choose here on Page 50 is 3422128, and that will be, again, from the controls on Page 96 of
7 8 9	is this is not the same column that was run for the prior samples. So the selectivity is	7 8 9	Q. Now, the control sample that you choose here on Page 50 is 3422128, and that will be, again, from the controls on Page 96 of Exhibit 1, correct?
7 8 9 10	is this is not the same column that was run for the prior samples. So the selectivity is slightly different. And I'm telling you that	7 8 9 10	Q. Now, the control sample that you choose here on Page 50 is 3422128, and that will be, again, from the controls on Page 96 of Exhibit 1, correct?  A. Okay. What am I on Page 50?
7 8 9 10 11 12 13	is this is not the same column that was run for the prior samples. So the selectivity is slightly different. And I'm telling you that the I'm sure of this, that it's being buried under polypropylene fragments.  Q. So are you telling me that the results	7 8 9 10 11 12 13	Q. Now, the control sample that you choose here on Page 50 is 3422128, and that will be, again, from the controls on Page 96 of Exhibit 1, correct?  A. Okay. What am I on Page 50? Q. On Page 50, Table 12. A. Okay. 3422128. Q. You show that Santonox quantitation,
7 8 9 10 11 12 13	is this is not the same column that was run for the prior samples. So the selectivity is slightly different. And I'm telling you that the I'm sure of this, that it's being buried under polypropylene fragments.  Q. So are you telling me that the results that you've obtained in Exhibit Number 1 for the	7 8 9 10 11 12 13	Q. Now, the control sample that you choose here on Page 50 is 3422128, and that will be, again, from the controls on Page 96 of Exhibit 1, correct?  A. Okay. What am I on Page 50? Q. On Page 50, Table 12. A. Okay. 3422128. Q. You show that Santonox quantitation, correct?
7 8 9 10 11 12 13 14	is this is not the same column that was run for the prior samples. So the selectivity is slightly different. And I'm telling you that the I'm sure of this, that it's being buried under polypropylene fragments.  Q. So are you telling me that the results	7 8 9 10 11 12 13	Q. Now, the control sample that you choose here on Page 50 is 3422128, and that will be, again, from the controls on Page 96 of Exhibit 1, correct?  A. Okay. What am I on Page 50? Q. On Page 50, Table 12. A. Okay. 3422128. Q. You show that Santonox quantitation, correct? A. In that table.
7 8 9 10 11 12 13 14 15	is this is not the same column that was run for the prior samples. So the selectivity is slightly different. And I'm telling you that the I'm sure of this, that it's being buried under polypropylene fragments.  Q. So are you telling me that the results that you've obtained in Exhibit Number 1 for the PYMS data are different from the results that you obtained for the Linda Batiste sample in	7 8 9 10 11 12 13 14 15	Q. Now, the control sample that you choose here on Page 50 is 3422128, and that will be, again, from the controls on Page 96 of Exhibit 1, correct?  A. Okay. What am I on Page 50? Q. On Page 50, Table 12. A. Okay. 3422128. Q. You show that Santonox quantitation, correct?  A. In that table. Q. Why did you choose the 4,430,284
7 8 9 10 11 12 13 14 15 16 17	is this is not the same column that was run for the prior samples. So the selectivity is slightly different. And I'm telling you that the I'm sure of this, that it's being buried under polypropylene fragments.  Q. So are you telling me that the results that you've obtained in Exhibit Number 1 for the PYMS data are different from the results that you obtained for the Linda Batiste sample in Exhibit 2?	7 8 9 10 11 12 13 14 15 16 17	Q. Now, the control sample that you choose here on Page 50 is 3422128, and that will be, again, from the controls on Page 96 of Exhibit 1, correct?  A. Okay. What am I on Page 50? Q. On Page 50, Table 12. A. Okay. 3422128. Q. You show that Santonox quantitation, correct?  A. In that table. Q. Why did you choose the 4,430,284 figure as the control against which you compare
7 8 9 10 11 12 13 14 15 16 17	is this is not the same column that was run for the prior samples. So the selectivity is slightly different. And I'm telling you that the I'm sure of this, that it's being buried under polypropylene fragments.  Q. So are you telling me that the results that you've obtained in Exhibit Number 1 for the PYMS data are different from the results that you obtained for the Linda Batiste sample in Exhibit 2?  A. It's a different column, so the	7 8 9 10 11 12 13 14 15 16 17	Q. Now, the control sample that you choose here on Page 50 is 3422128, and that will be, again, from the controls on Page 96 of Exhibit 1, correct?  A. Okay. What am I on Page 50? Q. On Page 50, Table 12. A. Okay. 3422128. Q. You show that Santonox quantitation, correct?  A. In that table. Q. Why did you choose the 4,430,284 figure as the control against which you compare Santonox?
7 8 9 10 11 12 13 14 15 16 17 18	is this is not the same column that was run for the prior samples. So the selectivity is slightly different. And I'm telling you that the I'm sure of this, that it's being buried under polypropylene fragments.  Q. So are you telling me that the results that you've obtained in Exhibit Number 1 for the PYMS data are different from the results that you obtained for the Linda Batiste sample in Exhibit 2?  A. It's a different column, so the selectivity is a little bit different.	7 8 9 10 11 12 13 14 15 16 17 18	Q. Now, the control sample that you choose here on Page 50 is 3422128, and that will be, again, from the controls on Page 96 of Exhibit 1, correct?  A. Okay. What am I on Page 50? Q. On Page 50, Table 12. A. Okay. 3422128. Q. You show that Santonox quantitation, correct?  A. In that table. Q. Why did you choose the 4,430,284 figure as the control against which you compare Santonox?  A. It's in the middle. Hang on, let me
7 8 9 10 11 12 13 14 15 16 17 18 19 20	is this is not the same column that was run for the prior samples. So the selectivity is slightly different. And I'm telling you that the I'm sure of this, that it's being buried under polypropylene fragments.  Q. So are you telling me that the results that you've obtained in Exhibit Number 1 for the PYMS data are different from the results that you obtained for the Linda Batiste sample in Exhibit 2?  A. It's a different column, so the selectivity is a little bit different.  Quantitation of additives is much more difficult	7 8 9 10 11 12 13 14 15 16 17 18 19 20	Q. Now, the control sample that you choose here on Page 50 is 3422128, and that will be, again, from the controls on Page 96 of Exhibit 1, correct?  A. Okay. What am I on Page 50? Q. On Page 50, Table 12. A. Okay. 3422128. Q. You show that Santonox quantitation, correct?  A. In that table. Q. Why did you choose the 4,430,284 figure as the control against which you compare Santonox?  A. It's in the middle. Hang on, let me check this again.
7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	is this is not the same column that was run for the prior samples. So the selectivity is slightly different. And I'm telling you that the I'm sure of this, that it's being buried under polypropylene fragments.  Q. So are you telling me that the results that you've obtained in Exhibit Number 1 for the PYMS data are different from the results that you obtained for the Linda Batiste sample in Exhibit 2?  A. It's a different column, so the selectivity is a little bit different.  Quantitation of additives is much more difficult than PYMS than it is it's good for detection	7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	Q. Now, the control sample that you choose here on Page 50 is 3422128, and that will be, again, from the controls on Page 96 of Exhibit 1, correct?  A. Okay. What am I on Page 50? Q. On Page 50, Table 12. A. Okay. 3422128. Q. You show that Santonox quantitation, correct? A. In that table. Q. Why did you choose the 4,430,284 figure as the control against which you compare Santonox? A. It's in the middle. Hang on, let me check this again. Q. I don't see that value in the controls
7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	is this is not the same column that was run for the prior samples. So the selectivity is slightly different. And I'm telling you that the I'm sure of this, that it's being buried under polypropylene fragments.  Q. So are you telling me that the results that you've obtained in Exhibit Number 1 for the PYMS data are different from the results that you obtained for the Linda Batiste sample in Exhibit 2?  A. It's a different column, so the selectivity is a little bit different.  Quantitation of additives is much more difficult than PYMS than it is it's good for detection and confirming the presence of things, it's not	7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	Q. Now, the control sample that you choose here on Page 50 is 3422128, and that will be, again, from the controls on Page 96 of Exhibit 1, correct?  A. Okay. What am I on Page 50? Q. On Page 50, Table 12. A. Okay. 3422128. Q. You show that Santonox quantitation, correct?  A. In that table. Q. Why did you choose the 4,430,284 figure as the control against which you compare Santonox?  A. It's in the middle. Hang on, let me check this again. Q. I don't see that value in the controls on Page 96. It should be there, shouldn't it?
7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	is this is not the same column that was run for the prior samples. So the selectivity is slightly different. And I'm telling you that the I'm sure of this, that it's being buried under polypropylene fragments.  Q. So are you telling me that the results that you've obtained in Exhibit Number 1 for the PYMS data are different from the results that you obtained for the Linda Batiste sample in Exhibit 2?  A. It's a different column, so the selectivity is a little bit different.  Quantitation of additives is much more difficult than PYMS than it is it's good for detection and confirming the presence of things, it's not good for quantitating anything.	7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	Q. Now, the control sample that you choose here on Page 50 is 3422128, and that will be, again, from the controls on Page 96 of Exhibit 1, correct?  A. Okay. What am I on Page 50? Q. On Page 50, Table 12. A. Okay. 3422128. Q. You show that Santonox quantitation, correct? A. In that table. Q. Why did you choose the 4,430,284 figure as the control against which you compare Santonox? A. It's in the middle. Hang on, let me check this again. Q. I don't see that value in the controls on Page 96. It should be there, shouldn't it? A. 3422128.
7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	is this is not the same column that was run for the prior samples. So the selectivity is slightly different. Now, the control sample that you choose here on Page 50 is 3422128, and that will be, again, from the controls on Page 96 of Exhibit 1, correct?  A. Okay. What am I on Page 50? Q. On Page 50, Table 12. A. Okay. 3422128. Q. You show that Santonox quantitation, correct? A. In that table. Q. Why did you choose the 4,430,284 figure as the control against which you compare Santonox? A. It's in the middle. Hang on, let me check this again. Q. I don't see that value in the controls on Page 96. It should be there, shouldn't it?

62 (Pages 242 to 245)

	Page 246		Page 248
1	Q. Do you know why that is?	1	Q. Would it be do you know why this
2	A. That would indicate to me that he	2	new control testing was conducted for Linda
3	reran the control. We extracted it.	3	Batiste?
4	Q. I thought we decided a moment ago they	4	A. Well, the response of the detectors,
5	didn't.	5	the HPLC type, LCMS detectors can change over
6	A. Most of the tests they didn't. I can	6	time, so it would just be good lab practice,
7	check that.	7	since this was run at a different time from the
8	Q. Okay. So what this says is that we	8	other samples, to rule out any change that way.
9	have yet a third value for this	9	Whereas an SEM photograph is an SEM photograph,
10	A. Standard.	10	it wouldn't matter, so there would be no need to
11	Q control	11	rerun those.
12	A. Control.	12	Q. Tell me again what it means to change
13	Q test.	13	the column.
14	Not standard, it's a control?	14	A. Well, when you're doing
15	A. Control.	15	chromatography, columns wear out, and you have
16	Q. So the value here of 4430284, you	16	to periodically change them. The peaks get
17	think is a new test of mesh tested with Carolyn	17	broad, they get narrower, materials start to
18	Lewis?	18	bleed into peaks start to bleed into one
19	A. Correct.	19	another, and it's just time to change the
20	Q. As you sit here today, do you know any	20	column. It's just normal what we call normal
21	other new tests that were conducted for Linda	21	maintenance, like changing the oil in a car.
22	Batiste in order to do on the controls that	22	Q. How do you determine when it's
23	were used to compare the Linda Batiste mesh	23	appropriate to change the column?
24	samples?	24	A. You have standards that you run, and
25	A. Let's check the control in Table 11	25	you look for resolution standards. And when the
	Page 247		Page 249
1	just to see. All right. Let's go back.	1	resolution no longer meets the minimum standard,
$\sim$	34221228.		it's time to change it. It's part of the SOD
2		2	it's time to change it. It's part of the SOP.
3	Q. What page are you on, please?	3	Q. How often do you change the column?
3 4	<ul><li>Q. What page are you on, please?</li><li>A. 92 and 49. It's the number of it's</li></ul>	3 4	<ul><li>Q. How often do you change the column?</li><li>A. When? I don't know how to answer</li></ul>
3 4 5	Q. What page are you on, please? A. 92 and 49. It's the number of it's the same standard run for the lauryl	3 4 5	Q. How often do you change the column? A. When? I don't know how to answer that.
3 4 5 6	Q. What page are you on, please? A. 92 and 49. It's the number of it's the same standard run for the lauryl thiodipropionate, but the number is different	3 4 5 6	Q. How often do you change the column? A. When? I don't know how to answer that. Q. Every 2,000 miles?

And that's a value you have two of those values from the first one on Page 92, and on Page 92 of Exhibit Number 1 you obtained a value of 71,633,460? A. Mm-hmm. Q. And a duplicate result of 96,522,909, and this is a third value for the same piece of mesh at 82,091,505. A. Right, between the other two.	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	Q. How often do you change the column? A. When? I don't know how to answer that. Q. Every 2,000 miles? A. It's when it fails, when it fails a test. Q. Okay. A. It's checked every time we run samples to see that the minimum resolution is there, or it's changed. Q. Before you sat down to give your deposition today, did you realize that the controls had had additional testing conducted on them? A. These controls here? Q. In Exhibit 2 for Linda Batiste. A. No. In all honesty, no. Q. Okay. Fair to understand that a doctor would have to give any opinion about the extent to which any degradation in the mesh that

1	actual physical type damage, it's not it's	1	BY MR. THOMAS:
2	beyond, out of my field.	2	Q. Do you know whether all of the samples
3	MR. THOMAS: I'm going to want copies	3	were tested?
4	of everything but the Burkley deposition. The	4	A. No. Some of the samples weren't
5	lab notebooks, the articles, and the SOPs.	5	tested.
6	MR. ANDERSON: Just leave them all	6	Q. Do you know why some weren't tested?
7	there for right now.	7	A. There were several that weren't, two
8	MR. THOMAS: What's the best way to do	8	or three maybe that weren't tested because they
9	that, Ben?	9	were mixtures of multiple products, and we
10	MR. ANDERSON: Good question. The lab	10	didn't want to run those.
11	notebooks obviously can't leave, so we would	11	Q. Okay. Is there any way to tell from
12	just have to run copies of those for you. All	12	the entries in the lab notebook, to your
13	the other things we can run copies for you. Or	13	knowledge, about the reasons why certain ones
14	we can give them to madame court reporter and	14	weren't tested?
15	have her run some copies.	15	A. Here's one that wasn't run and it
16	MR. THOMAS: I don't care just as long	16	wasn't run because I'm assuming it wasn't run
17	as I get them. Whatever makes sense. I think	17	because sample received with no formalin. We
18	you and I can figure this out.	18	didn't run it. We didn't know what would happen
19	MR. ANDERSON: Okay.	19	to the sample in the absence of preservatives so
20	BY MR. THOMAS:	20	we just didn't run it.
21	Q. Doctor, you brought a number of things	21	Q. And who was that?
22	with you to the deposition today including a	22	A. We have several here. Cynthia
23	number of books, a copy of the deposition of Dan	23	Simpson, and Alma Sarcia.
24	Burkley.	24	MR. ANDERSON: Garcia.
25	I have here three laboratory	25	A. Garcia. Sorry. JPG240-241,

65 (Pages 254 to 257)

	Page 258		Page 260
1	Q. Who are they?	1	Q. Do you specifically know how that
2	A. My son and his business partner.	2	happened?
3	Q. You no longer are an owner of Jordi	3	A. Not exactly, I don't.
4	Labs?	4	Q. Okay. That's fine.
5	A. No. My son. I wanted to get out in	5	And what did you do to assure that
6	time from the ownership situation.	6	Evans Analytical Group and what's the other
7	Q. Okay. And when did that happen?	7	company?
8	A. I don't remember exactly. It's four	8	MR. ANDERSON: They're both Evans.
9	or five years.	9	A. They're both Evans, different
10	Q. How many employees does Jordi Labs	10	divisions.
11	have now?	11	BY MR. THOMAS:
12	A. Again, I don't know exactly. It	12	Q. Sorry. Strike that.
13	changes every day. I'd say 25, 26, around	13	What did you do to assure that the
14	there.	14	Evans Analytical Group was capable of performing
15	Q. Do you know what percentage of the	15	the work that you asked them to do?
16	Jordi Labs work is legal consulting on legal	16	A. We've been working with a gentleman at
17	cases?	17	Chemir, and we've been referring jobs back and
18	A. Well, generally it's a small	18	forth for years at various times, and he is
19	percentage. As I say, right now it's a bigger	19	he's really our contact with Evans. We've had
20	percentage because of the nature of this case,	20	tremendous results for a number of years working
21	but it's an unusual situation.	21	with both ways, he sends a lot of work here,
22	Q. In this stack of documents are a	22	we send some we send a lot of work his way.
23	number of reports from an Evans Analytical	23	Q. So the FTIR strike that.
24	Group.	24	So all of the data done by Evans was
25	A. Right.	25	added to your report without change or input
	Page 259		Page 261
1	Q. Tell me what those are, please.	1	from you?
2	A. The FTIR microscope work was done by	2	A. Yes. Basically you have those
3	Evans in California, and the SEM, SEM-EDX was	3	results. Any changes you can see there. I'm
4	done by Evans Group in Minnesota.	4	sure there were a few verbal changes, but
5	Q. Is that because you don't have the	5	essentially it's the IR spectra, the IR spectra.
6	A. We don't have those instruments.	6	We certainly wouldn't have we wouldn't even
7	Q. How did you happen to choose the Evans	7	have the capability of changing those spectra.
8	Analytical Group to perform this testing?	8	Q. Okay. Has Jordi Labs ever had an
9	A. We've worked with a company called	9	electron microscope?
10	Chemir in the past, they were bought out by	10	A. No.
11	Evans, and they're, I think, about a \$7 billion	11	Q. Has Jordi Labs ever had the capability
12	company, and they're a very well respected lab,	12	to do the FTIR analysis?
13	so we utilize their technique that we don't	13	A. Yes.
14	have.	14	Q. When did you have that?
15	Q. Is it the FTIR data	15	A. Oh, probably well, we've had it
16	A. FTIR microscope.	16	since basically day one of the company at
17	Q. Okay. So for the FTIR and the	17	various units. Classical FTIR. Now we have the
18	scanning electron microscope work, you ship that	18	Diamond ATR system.
19	out?	19	Q. You still have it?
20	A. That's correct.	20	A. Absolutely.
21	Q. And how did you transport the samples?	21	Q. Why do you ship this out to Evans?
22	A. They were sent by our office staff	22	MR. ANDERSON: Micro.
22 23	A. They were sent by our office staff following the regulations that we procedures	23	A. Micro.
22	A. They were sent by our office staff		

66 (Pages 258 to 261)

1	Page 262		Page 264
	Has Jordi ever had the capability to	1	how to conduct the tests that you did?
2	do the kind of work that Evans did on the FTIR?	2	A. That's right.
3	A. No, we have never had an FTIR	3	Q. Diamond Shamrock Corporation, is this
4	microscope system.	4	a standard for polypropylene, or can you tell by
5	Q. Who is Scott Bowman?	5	looking at it?
6	A. He's the gentlemen that transfers jobs	6	A. Let me take a look. I can't read it
7	back and between us and Evans, or he sends us	7	from there.
8	work, we send him work.	8	Q. (Handing).
9	Q. Does he work for Jordi or work for	9	A. Yes, that's the polypropylene standard
10	Evans?	10	spectrum. Isotactic.
11	A. He works for himself.	11	Q. When we talked before, I thought we
12	Q. Pretty good gig.	12	decided you didn't use a standard against which
13	A. It's worked out extremely well for us	13	to compare your results, that you used your own
14	and extremely well for him. We love his	14	training, education, literature.
15	expertise and his ability to get us in touch	15	A. There's no way for me to keep track of
16	with the best people.	16	everything these people are doing out here now.
17	Q. He's not a is he a technical guy?	17	I'm telling you the polystyrene is the one
18	A. Absolutely is.	18	that's used.
19	Q. Does he do any technical work?	19	Q. Do you know the extent to which the
20	A. No, he just basically is	20	people in the lab used that Diamond Shamrock
21	Q. He's a broker?	21	standard for polypropylene in connection with
22	A. He's a broker, a very good one.	22	their work on the opinions in Exhibit 1 or 2?
23	Q. So on these SEM analysis reports here	23	Do you know?
24	that you got apparently from Evans	24	A. No, because these this isn't an SOP
25	A. He may	25	anyway. This is just a bunch of spectra. I'm
	Page 263		Page 265
1	MR. ANDERSON: Hold on.	1	not sure why that's even in there, it's not SOP.
2	BY MR. THOMAS:	2	Q. Okay. Just for the record, it's a
3	Q the numbers appear that I asked you	3	multi-page document copyrighted 1980, 1981, 1993
	about, you didn't know where they came from?		
4		4	for Sadtler, and it's Diamond Shamrock
4 5	A. Right.	4 5	for Sadtler, and it's Diamond Shamrock Polypropylene.
5 6	<ul><li>A. Right.</li><li>Q. Is it likely that the numbers that I</li></ul>	5 6	for Sadtler, and it's Diamond Shamrock Polypropylene. What's the document I just gave you
5 6 7	A. Right. Q. Is it likely that the numbers that I asked you about in both reports on the SEM	5 6 7	for Sadtler, and it's Diamond Shamrock Polypropylene. What's the document I just gave you there, do you know? Do you recognize that?
5 6 7 8	A. Right. Q. Is it likely that the numbers that I asked you about in both reports on the SEM images, likely those were put on there by Evans,	5 6 7 8	for Sadtler, and it's Diamond Shamrock Polypropylene. What's the document I just gave you there, do you know? Do you recognize that? A. It's another polypropylene spectrum,
5 6 7 8 9	A. Right. Q. Is it likely that the numbers that I asked you about in both reports on the SEM images, likely those were put on there by Evans, or do you know?	5 6 7 8 9	for Sadtler, and it's Diamond Shamrock Polypropylene. What's the document I just gave you there, do you know? Do you recognize that? A. It's another polypropylene spectrum, J7904.
5 6 7 8 9 10	A. Right. Q. Is it likely that the numbers that I asked you about in both reports on the SEM images, likely those were put on there by Evans, or do you know? A. They would have had to have been put	5 6 7 8 9 10	for Sadtler, and it's Diamond Shamrock Polypropylene. What's the document I just gave you there, do you know? Do you recognize that? A. It's another polypropylene spectrum, J7904. Oh, let me see the other one again,
5 6 7 8 9 10 11	A. Right. Q. Is it likely that the numbers that I asked you about in both reports on the SEM images, likely those were put on there by Evans, or do you know? A. They would have had to have been put on by Evans because we couldn't have done it.	5 6 7 8 9 10 11	for Sadtler, and it's Diamond Shamrock Polypropylene. What's the document I just gave you there, do you know? Do you recognize that? A. It's another polypropylene spectrum, J7904. Oh, let me see the other one again, please.
5 6 7 8 9 10 11	A. Right. Q. Is it likely that the numbers that I asked you about in both reports on the SEM images, likely those were put on there by Evans, or do you know? A. They would have had to have been put on by Evans because we couldn't have done it. Q. Okay.	5 6 7 8 9 10 11 12	for Sadtler, and it's Diamond Shamrock Polypropylene. What's the document I just gave you there, do you know? Do you recognize that? A. It's another polypropylene spectrum, J7904. Oh, let me see the other one again, please. Q. (Handing).
5 6 7 8 9 10 11 12 13	A. Right. Q. Is it likely that the numbers that I asked you about in both reports on the SEM images, likely those were put on there by Evans, or do you know? A. They would have had to have been put on by Evans because we couldn't have done it. Q. Okay. A. It's their pictures.	5 6 7 8 9 10 11 12	for Sadtler, and it's Diamond Shamrock Polypropylene. What's the document I just gave you there, do you know? Do you recognize that? A. It's another polypropylene spectrum, J7904. Oh, let me see the other one again, please. Q. (Handing). (Witness reviewing document.)
5 6 7 8 9 10 11 12 13	A. Right. Q. Is it likely that the numbers that I asked you about in both reports on the SEM images, likely those were put on there by Evans, or do you know? A. They would have had to have been put on by Evans because we couldn't have done it. Q. Okay. A. It's their pictures. Q. Do you have these in an electronic	5 6 7 8 9 10 11 12 13 14	for Sadtler, and it's Diamond Shamrock Polypropylene. What's the document I just gave you there, do you know? Do you recognize that? A. It's another polypropylene spectrum, J7904. Oh, let me see the other one again, please. Q. (Handing). (Witness reviewing document.) A. These appear to be spectra of the
5 6 7 8 9 10 11 12 13 14 15	A. Right. Q. Is it likely that the numbers that I asked you about in both reports on the SEM images, likely those were put on there by Evans, or do you know? A. They would have had to have been put on by Evans because we couldn't have done it. Q. Okay. A. It's their pictures. Q. Do you have these in an electronic format? I'm sure you do. Digital format?	5 6 7 8 9 10 11 12 13 14 15	for Sadtler, and it's Diamond Shamrock Polypropylene.  What's the document I just gave you there, do you know? Do you recognize that?  A. It's another polypropylene spectrum, J7904.  Oh, let me see the other one again, please.  Q. (Handing).  (Witness reviewing document.)  A. These appear to be spectra of the explants done on our instrument which were
5 6 7 8 9 10 11 12 13 14 15	A. Right. Q. Is it likely that the numbers that I asked you about in both reports on the SEM images, likely those were put on there by Evans, or do you know? A. They would have had to have been put on by Evans because we couldn't have done it. Q. Okay. A. It's their pictures. Q. Do you have these in an electronic format? I'm sure you do. Digital format? A. I'm sure we can get them. Adi, again,	5 6 7 8 9 10 11 12 13 14 15 16	for Sadtler, and it's Diamond Shamrock Polypropylene.  What's the document I just gave you there, do you know? Do you recognize that?  A. It's another polypropylene spectrum, J7904.  Oh, let me see the other one again, please.  Q. (Handing).  (Witness reviewing document.)  A. These appear to be spectra of the explants done on our instrument which were polypropylene. We saw lots of noise. This is
5 6 7 8 9 10 11 12 13 14 15 16 17	A. Right. Q. Is it likely that the numbers that I asked you about in both reports on the SEM images, likely those were put on there by Evans, or do you know? A. They would have had to have been put on by Evans because we couldn't have done it. Q. Okay. A. It's their pictures. Q. Do you have these in an electronic format? I'm sure you do. Digital format? A. I'm sure we can get them. Adi, again, would know, handles that kind of thing for me.	5 6 7 8 9 10 11 12 13 14 15 16 17	for Sadtler, and it's Diamond Shamrock Polypropylene. What's the document I just gave you there, do you know? Do you recognize that? A. It's another polypropylene spectrum, J7904. Oh, let me see the other one again, please. Q. (Handing). (Witness reviewing document.) A. These appear to be spectra of the explants done on our instrument which were polypropylene. We saw lots of noise. This is why we chose to go with the FTIR microscope
5 6 7 8 9 10 11 12 13 14 15 16 17 18	A. Right. Q. Is it likely that the numbers that I asked you about in both reports on the SEM images, likely those were put on there by Evans, or do you know? A. They would have had to have been put on by Evans because we couldn't have done it. Q. Okay. A. It's their pictures. Q. Do you have these in an electronic format? I'm sure you do. Digital format? A. I'm sure we can get them. Adi, again, would know, handles that kind of thing for me. Q. Did you do all the other testing	5 6 7 8 9 10 11 12 13 14 15 16 17	for Sadtler, and it's Diamond Shamrock Polypropylene.  What's the document I just gave you there, do you know? Do you recognize that?  A. It's another polypropylene spectrum, J7904.  Oh, let me see the other one again, please.  Q. (Handing).  (Witness reviewing document.)  A. These appear to be spectra of the explants done on our instrument which were polypropylene. We saw lots of noise. This is why we chose to go with the FTIR microscope route. We had to look at the total samples,
5 6 7 8 9 10 11 12 13 14 15 16 17 18	A. Right. Q. Is it likely that the numbers that I asked you about in both reports on the SEM images, likely those were put on there by Evans, or do you know? A. They would have had to have been put on by Evans because we couldn't have done it. Q. Okay. A. It's their pictures. Q. Do you have these in an electronic format? I'm sure you do. Digital format? A. I'm sure we can get them. Adi, again, would know, handles that kind of thing for me. Q. Did you do all the other testing in-house?	5 6 7 8 9 10 11 12 13 14 15 16 17 18	for Sadtler, and it's Diamond Shamrock Polypropylene.  What's the document I just gave you there, do you know? Do you recognize that?  A. It's another polypropylene spectrum, J7904.  Oh, let me see the other one again, please.  Q. (Handing).  (Witness reviewing document.)  A. These appear to be spectra of the explants done on our instrument which were polypropylene. We saw lots of noise. This is why we chose to go with the FTIR microscope route. We had to look at the total samples, number one.
5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	A. Right. Q. Is it likely that the numbers that I asked you about in both reports on the SEM images, likely those were put on there by Evans, or do you know? A. They would have had to have been put on by Evans because we couldn't have done it. Q. Okay. A. It's their pictures. Q. Do you have these in an electronic format? I'm sure you do. Digital format? A. I'm sure we can get them. Adi, again, would know, handles that kind of thing for me. Q. Did you do all the other testing in-house? A. Yes, we did.	5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	for Sadtler, and it's Diamond Shamrock Polypropylene.  What's the document I just gave you there, do you know? Do you recognize that?  A. It's another polypropylene spectrum, J7904.  Oh, let me see the other one again, please.  Q. (Handing).  (Witness reviewing document.)  A. These appear to be spectra of the explants done on our instrument which were polypropylene. We saw lots of noise. This is why we chose to go with the FTIR microscope route. We had to look at the total samples, number one.  Number two, the samples wouldn't lay
5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	A. Right. Q. Is it likely that the numbers that I asked you about in both reports on the SEM images, likely those were put on there by Evans, or do you know? A. They would have had to have been put on by Evans because we couldn't have done it. Q. Okay. A. It's their pictures. Q. Do you have these in an electronic format? I'm sure you do. Digital format? A. I'm sure we can get them. Adi, again, would know, handles that kind of thing for me. Q. Did you do all the other testing in-house? A. Yes, we did. Q. The documents that I'm going through	5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	for Sadtler, and it's Diamond Shamrock Polypropylene.  What's the document I just gave you there, do you know? Do you recognize that?  A. It's another polypropylene spectrum, J7904.  Oh, let me see the other one again, please.  Q. (Handing).  (Witness reviewing document.)  A. These appear to be spectra of the explants done on our instrument which were polypropylene. We saw lots of noise. This is why we chose to go with the FTIR microscope route. We had to look at the total samples, number one.  Number two, the samples wouldn't lay flat on our Diamond, and they tended to want to
5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	A. Right. Q. 1	Q. I will mark as Exhibit Number 7 the	1	MR. THOMAS: Digital is my first
2	documents you've just been looking at.	2	choice, I'll print my own copy. The hard copy
3	(Whereupon, Jordi Exhibit Number 7,	3	allows me to know I have everything. Not
4	Group of films, was marked for	4	because I'm suggesting you're going to do
5	identification.)	5	anything with it.
6	BY MR. THOMAS:	6	MR. ANDERSON: No, it's easier. I'm a
7	Q. And the first page is the Diamond	7	hard copy guy, too. Why don't we figure that
8	Shamrock standard from Sadtler, S-A-D-T-L-E-R,	8	out after the depo.
9	and then attached to that are FTIR spectra that	9	BY MR. THOMAS:
10	you all ran in-house with your own capability,	10	Q. I'd also like a color copy of your
11	at which point you determined that you weren't	11	studies that you have.
12	generating the specificity of the data you	12	A. You'd like a what, sir?
13	needed to make your analysis so you contracted	13	Q. Color copy so I can capture the
14	it out for microscopic FTIR?	14	highlighting in your studies. Because you
15	A. That's correct.	15	brought with you today a notebook of studies
16	Q. Is that fair?	16	upon which you rely for your opinions in the
17	A. That's fair.	17	case.
18	Q. Mark that as Exhibit Number 7.	18	A. Articles, yes.
19	MR. THOMAS: I won't mark the lab	19	Q. And you have highlighting and writing
20	notebooks.	20	on them, correct?
21	The rest of what I have here are	21	A. Mostly highlighting, yes.
	1 II COD A E		( )
22	miscellaneous SOPs, the Evans reports, and the	22	Q. I want versions of those that capture
23	Evans reports. Do you want the court reporter	23	the highlighting.

68 (Pages 266 to 269)

Page 270 Page 272 MR. ANDERSON: We need to take a 1 1 Q. And your job as an analytical chemist 2 2 break. Let's take a break. was to do the lab work associated with any 3 3 issues that might arise? (Whereupon, a recess was taken from 4 4 4:39 p.m. to 4:56 p.m.) A. Whatever came up. Whatever projects 5 5 BY MR. THOMAS: they wanted support for. 6 6 Q. Doctor, attached to Exhibit 1 is a Q. All right. And the extent to which 7 7 any of these products may be appropriate for use part of -- oh, right after your primary report, 8 is your CV. I'm just going to ask you some 8 in humans would be something beyond what you 9 9 questions about your career. You can look at were doing in the lab on the bench? 10 the CV if you want to. I imagine you know it 10 A. Yes. 11 Q. Okay. What did you do -- you were 11 pretty well. 12 12 A. Where is it here? What page? next employed for six months at Waters 13 Q. It's after Page 102. I bet you it's 13 Associates. What were you have doing there; 14 14 more of the same analytic chemist group? in the back of that. 15 A. Appendix. Conclusion. 15 A. Basically Waters at that time was, 16 16 MR. ANDERSON: After Page 102? still is a great company, but by my standards, 17 MR. THOMAS: That's where I have it. 17 my personality, I like a company that's 18 personable with their customers. They had a 18 It will be in that copy right there. 19 A. All right. That's fine. 19 philosophy at that time that they would work to 20 MR. THOMAS: We've got it here, Ben. 20 solve the customer's separation need and earn 21 21 the sale of the HPLC instrument through A. Okay. 22 22 BY MR. THOMAS: providing the solution of their separations 23 23 Q. All right. Tell me about your problem, and so my job was to develop those education after college, Dr. Jordi. I mean 24 24 methods. The sales rep would come in and say 25 after high school. 25 "this guy wants to separate such and such, and Page 271 Page 273 1 A. I went to Northern Illinois University 1 get me a method so we can sell the instrument." 2 in DeKalb, Illinois, worked on my bachelor's 2 Q. Okay. 3 degree in chemistry, graduated in the summer of 3 A. At that time liquid chromatography was 4 1967. 4 nowhere near as advanced as it is now, so if a 5 Was offered a graduate position there, 5 guy wanted to separate something, likely there 6 б an NIH fellowship, so I stayed there and worked was no published methods available many times, 7 7 on my doctorate degree. I finished that in so then we would get involved. 8 8 1973, and actually officially graduated in Q. So were your years -- or your time at 9 January of '74, but I'd already left and was 9 Waters dealing primarily with liquid 10 already in the US Army at Walter Reed by that 10 chromatography? A. Yes, or columns. 11 point. 11 Q. You worked at Walter Reed for how many 12 12 O. Or columns. Does that include your entire time at 13 years? 13 14 14 A. A little over three years. Waters up until February, 1980? 15 Q. What did you do at Walter Reed? 15 A. Yes. Developed amino acid, worked on A. It was a lab tech chemist position. I 16 developing an amino acid analyzer, first 16 worked with, as I mentioned, the biodegradable 17 generation amino acid analyzer. And then they 17 18 implants, polylactic and glycolic acid 18 sent me places to install amino acid analyzers, copolymers. We had an another project for 19 19 like they sent me to Germany, they sent me to 20 purification of eugenol, which is used by 20 Chicago. 21 21 dentists. I worked on developing methods of Q. Continuing in the analytical chemistry 22 purifying eugenol. 22 area? 23 Q. You were employed at this time as an 23 A. Yeah, it was amino acid analysis at 24 analytical chemist? 24 this point, that was the specialty at that point 25 25 A. Basically. in time. It always kept changing depending on

69 (Pages 270 to 273)

Page 274 Page 276 1 Q. How would you describe the business of 1 the needs of the company, of course. 2 2 Q. Then you went for a short time to LC Jordi Labs today? 3 3 Laboratories? A. We're an analytical testing lab, 4 4 A. I'm looking at the order of these material science, some expert witness testimony, 5 5 it's not the major thrust by any stretch, pages here. 6 6 Q. You go back to front, I think. product development. Because the other side of 7 A. There's Army. The pages aren't 7 the business that I developed during my time is 8 listed. 8 several dozen products, fluorinated gel that I 9 9 MR. ANDERSON: Is this it here? patented that's selling. 10 A. Where are we here? 10 Q. What does a fluorinated gel do? 11 A. Well, in chromatography, as you run 11 BY MR. THOMAS: Q. Hopefully February, 1980 to September, 12 12 fast -- liquid chromatography, or any 13 13 1980, it looks like you were employed by LC chromatography, as you run faster you'll tend to Laboratories as a senior chemist? 14 get less efficient plates. Plates is a 14 15 A. That's right. 15 narrowness of the peaks coming off, and the 16 16 Q. You managed the complete polymer GPC narrower they are the better, the more things 17 17 separated the narrower they are. program? 18 So with the fluorinated gel, solvents, 18 A. Right. I was working at the time with 19 a Waters 150C, which is a high temperature GPC 19 it's like Teflon surface chemistry, solvents 20 system running high temperature samples, among 20 tend not to wet it. Since solvents don't wet 21 21 other things, and I was responsible for surface, they don't create drag, and that's what 22 22 maintaining that instrument. broadens the peaks. And so now I can run 23 23 And we also were a contract lab, so we something at 10 mils a minute instead of one mil 24 got all kinds of projects. Whatever the 24 a minute, I can run at one-tenth the time on 25 customers sent in they wanted us to do, we did, 25 that kind of column. Page 275 Page 277 1 iust like we have here now. 1 I developed a polyamide type column, 2 Q. Same kind of internal analytical work? 2 we call it Extreme. It's a column that runs 3 A. Yes. 3 things in water, polar solvents, so today our 4 Q. Okay. 4 polyamides, nylons, proteins, can be run on the 5 5 A. It might be prep, it might be Extreme material. 6 б developing analytical method, it might be I have a standard line of DVD resins 7 7 polymer formulation, whatever, whatever it was. that I've developed. Those are selling well. 8 8 Q. And then from October of 1980 until And basically there's a whole product 9 July, 2008 you ran your own show? 9 line. There's SFE product, solid face 10 A. That's right. Remember I told you 10 extraction cartridges. four or five years, that's where it is. 2008 we 11 11 Q. Is it fair to describe your business 12 as a lab that offers analytical chemistry 12 turned it over to Mark. 13 Q. Has the business of Jordi Labs largely 13 services to those who might need it? 14 been the same over the time frame it's operated? 14 A. Yes. 15 A. Yes. But we're continuing to add 15 Q. And whatever other products you all 16 instrumentation. So some of the instruments we 16 might develop on your own? 17 don't have now, if you come back in a few years, A. The products we developed are no 17 18 lord willing, we will have. Like we're thinking 18 like -- I would say we probably have a million 19 19 dollar column inventory here, if we had to go about an FTIR microscope system, we're thinking 20 about an SEM system. We just invested in a QTOF 20 out and buy them all, but we save a good portion 21 21 GC system which should be in within the next few of that money by making them ourselves. And as 22 a side bonus, we sell them on the side and make 22 months to match the LCMS QTOF system, which 23 gives you more accurate mass and better ability 23 money from the sale of them, too, as products. to get more accurate mass and more accurate 24 That was my business model. 24 25 25 identification of unknowns. And when I successfully developed

70 (Pages 274 to 277)

	Page 278		Page 280
1	methods for clients, then they would say they	1	A. The same type of thing, molecular
2	might say "okay, now you run \$100,000 worth or	2	weight, additives.
3	\$200,000 worth of samples, I want to take that	3	Q. How long ago did you do the hip
4	in-house, sell me the column, turn-key method."	4	implant work?
5	They've already seen my methods here, they've	5	A. The same thing.
6	seen the results, they just take the column and	6	Q. 20 years ago?
7	start running. But now I don't use the total	7	A. 20 years ago-ish.
8	business, I have a column customer instead of a	8	Q. Have you done anything in the last ten
9	sample customer.	9	years in hip implants?
10	Q. So when you talk about the methods,	10	A. No, I haven't seen it recently.
11	you're talking about methods of analytical	11	Q. Do you remember who you worked with on
12	chemistry that you come up with for your	12	hip implants?
13	customers?	13	A. No.
14	A. Yes.	14	Q. Did you give any depositions in hip
15	Q. Prior to your deposition today, have	15	implant litigation?
16	you ever testified or consulted in a medical	16	A. I don't think so.
17	device case?	17	Q. Do you know whether Jordi Labs works
18	A. I have testified. I don't think, I	18	on any current hip implant litigation?
19	don't recall well, I have been involved with	19	A. No. No, I shouldn't say I have to
20	polypropylene implants, artificial hips,	20	say I don't know because I really don't know
21	artificial knees, polyethylene, I believe. I've	21	what the current workflow is. I don't talk to
22	been involved with contact lenses. I don't	22	the customers anymore directly. I used to know
23	I've been involved in the legal cases, many	23	that intimately, but I don't now.
24	times they don't go to court, they settle, so	24	Q. Contact lenses, have you done any work
25	you say testify, testifying has been less, of	25	on contact lenses in the last 15 years?
	Page 279		Page 281
1	course, than the work for because people will	1	A. I couldn't name the customers. I
2	come to me and not even tell me it's a legal	2	suspect we have because we've worked on
3	case, then they'll see the results and then tell	3	methacrylate type gels, and hematype gels which
4	me they want to do more and now they'll tell me	4	are used in that kind of product.
5	it's a legal case.	5	Q. In a litigation context?
6	Q. What did you do in connection with	6	A. No, just analysis.
7	knee implants?	7	Q. For the knees, hips, and contact
8	A. I just ran GPC, additives.	8	lenses that you just identified, do you recall
9	Q. Analytical testing?	9	giving any deposition testimony in any of those
10	A. Just to see if the polymer was	10	cases?
11	degraded over periods of time, if the additives	11	A NIC
			A. No.
12	were still there, just like we're doing now.	12	Q. Have you ever testified as an expert
12 13	were still there, just like we're doing now.  Q. Did you give any deposition testimony	12 13	Q. Have you ever testified as an expert in a medical device case before today?
12 13 14	were still there, just like we're doing now.  Q. Did you give any deposition testimony in any cases involving knee implants?	12 13 14	Q. Have you ever testified as an expert in a medical device case before today?  A. I don't believe so.

	Page 282		Page 284
1	A. I have a recollection, but I couldn't	1	Q for this work?
2	even tell you what we did.	2	A. What's Greg's last name? I can look
3	Q. Are you familiar with a company known	3	it up.
4	as Ethicon?	4	MR. ANDERSON: Elsdon.
5	A. Yes.	5	A. Elsdon.
6	Q. Do you have any recollection of ever	6	BY MR. THOMAS:
7	working with Ethicon?	7	Q. And what kind of file materials would
8	A. The name sure sounds familiar.	8	the company typically keep that would govern the
9	Q. Do you know the business of Ethicon?	9	relationship that it has with a customer, an
10	A. Well, I do, I mean I know one part of	10	engagement or purchase order or a contract of
11	it at least now, these meshes. I don't know, I	11	some sort outlining the work you're going to do?
12	don't know what else they might be involved in.	12	A. There has to be some kind of
13	Q. Do you know any business interests	13	paperwork, otherwise we wouldn't begin work.
14	that Ethicon has beyond the mesh that's involved	14	Q. Anything else?
15	in the litigation about which you're testifying	15	A. Not very formal, other than that.
16	today?	16	Q. On the invoices we talked about
17	A. Other than the mesh?	17	earlier that I marked as an exhibit, there were
18 19	Q. Right. A. No.	18 19	a number of surcharges for rush work. Are you
20		20	familiar with those? A. Yes.
21	Q. And the only reason you know about the mesh and its relationship to Ethicon is because	21	Q. What happened? Why were the
22	you're involved in this case, is that fair?	22	surcharges made?
23	A. That's right.	23	A. Well, like in the Batiste case, the
24	Q. We talked earlier about work that	24	sample was explanted recently, and we had to be
25	Jordi Labs may be doing in litigation involving	25	ready for the deposition today, so in order to
	Page 283		Page 285
1		1	
1 2	Bard. Do you know whether Jordi Labs is doing	1 2	do that it had to be done on a rush basis or it
3	work involving the meshes of any other manufacturer?	3	wouldn't be ready. Normal turnaround is ten
4	A. I don't have any idea.	4	days.  Q. Do you have a pricing policy that
5	Q. Do you have an engagement letter with	5	determines the extent to which you markup work
6	the Plaintiffs in this case?	6	for surcharges?
7	A. No.	7	A. Yeah, they do. It's maybe double. I
8	Q. Do you know whether Jordi Labs has an	8	don't again, I don't control that. But I'm
9	engagement letter with the Plaintiffs in the	9	familiar with it.
10	case?	10	Q. For example, on invoice 7881, there's
11	A. Well, we have we send out	11	a surcharge for rush analytical surfaces of
12	quotations, and those have to be signed.	12	\$35,000.
13	Q. Okay.	13	Would that be a charge in addition to
14	A. Somehow.	14	what it ordinarily costs?
15	Q. For work that's been done in this	15	A. Yes.
16	case, you should have on your file a contract or	16	Q. And again on 7883, 9/11/2013, there's
17	agreement?	17	another surcharge for \$67,813?
18	A. That would be the way the work is	18	A. Yes.
19	handled is it goes through a project manager,	19	We're basically set up
20	and the project manager would have that quote.	20	MR. ANDERSON: There's no question.
21	He generates the quotes, and then it's approved	21	THE WITNESS: Sorry.
22	by Mark and others.	22	MR. ANDERSON: No question pending.
22 23	by Mark and others.  Q. Do you know who the project manager	23	MR. THOMAS: I'm finished. Thank you.
22	by Mark and others.		

72 (Pages 282 to 285)

	Page 286		Page 288
1	talk, and we'll be back on here as soon as we	1	Jordi Labs, and they brought results back to
2	can.	2	you, and you interpreted those results?
3	(Whereupon, a recess was taken from	3	A. That's right.
4	5:16 p.m. to 5:49 p.m.)	4	Q. Is that also standard in your
5	CROSS EXAMINATION	5	industry?
6	BY MR. ANDERSON:	6	A. Absolutely.
7	Q. Dr. Jordi, I'm just going to ask you a	7	Q. In talking about your opinions
	few questions. I know it's been a long day, but	8	regarding the degradation of the meshes from
	I just have a few follow-up questions to some of	9	Ms. Batiste, Ms. Lewis, and the other women
	the things Mr. Thomas asked you. Okay?	10	whose explant samples you reviewed today, do you
11	A. Okay.	11	have an opinion as to whether or not those
12	Q. Doctor, all of the testing that we've	12	meshes would degrade even if there were
	been discussing all day long that was performed	13	antioxidants present in the polypropylene?
	by Jordi Labs, are all those tests industry	14	MR. THOMAS: Object to the form of the
15	standard?	15	question.
16	A. Yes. Routine.	16	A. It's possible that they could if the
17	Q. In performing these tests, the ones	17	amount of peroxide, superoxide, other oxidants,
	that were done at Jordi Labs, were standard	18	the irritation, the inflammation was great
	operating procedures here at Jordi Labs	19	enough in a given patient.
	followed?	20	BY MR. ANDERSON:
21	A. Yes.	21	Q. You said "possible," so we have to
22	Q. Were lab notebooks carefully collected	22	correct that.
23	and each step written down by	23	Do you have an opinion to a reasonable
24	A. Yes.	24	degree of medical certainty as to whether or not
25	Q. Let me finish.	25	the meshes in Ms. Batiste, Ms. Lewis, and others
	Page 287		Page 289
1	by Jordi Labs?	1	could still degrade showing the cracking on SEM
2	A. Yes.	2	and showing SEM-EDX analysis of the particles to
3	Q. And was all of the testing that we've	3	be polypropylene even if there was antioxidants
4	described today done at your direction?	4	present in the mesh?
5	A. Yes, I requested these tests.	5	MR. THOMAS: Object to the form of the
6	Q. Is it standard or non-standard in your	6	question.
7	industry for someone to assign work or to send	7	MR. ESTEE: Object to form.
8	work of this nature, this type of testing, to	8	A. It's certainly the antioxidants can
9	someone else to perform the testing?	9	be overcome if you throw enough oxidant at the
10	A. It's standard procedure because	10	polymer.
	nobody, almost nobody has enough, except the	11	BY MR. ANDERSON:
12	giants, has enough money to have all the	12	Q. Is the sole basis for stating that
	instruments.	13	antioxidants can leach from polypropylene just
14	Q. So when Mr. Thomas was questioning you	14	your work done in this case, or are there other
15	about some of the jobs you sent to Evans, and	15	bases for that opinion?
	you said sometimes Evans sends jobs to you, is	16	MR. THOMAS: Object to the form of the
	that standard in your industry?	17	question.
18	A. Absolutely.	18	A. Certainly additives bloom at varying
19	Q. Therefore, was it standard for you to	19	rates depending on their compatibility with the
20	send some of the FTIR microscopy and other tests	20	polymer system they're put in. So Santonox R
	out to Evans to have them send you the results?	21	can bloom, most any additive can bloom at some
22	A. Yes.	22	rate, and the less compatible it is with the
2 2	Q. In preparing your report in this case	23	polymer the faster it will bloom, and hence the
23			
24	and providing your opinions, is it fair to say that you assigned these projects to folks at	24 25	faster it will be lost. So polymers can lose their antioxidants even if they're stabilized

73 (Pages 286 to 289)

1 initially. In fact, they all do at some rate. 2 BY MR. ANDERSON: 3 Q. And is that knowledge that you just 4 expressed based only upon the studies that you 5 did here, or is that something that you brought 6 with you before this litigation?		Page 290		Page 292
2 BY MR. ANDERSON: 4 expressed based only upon the studies that you did here, or is that something that you brought with you before this liftigation? 5 MR. THOMAS: Object to the form of the question. 6 A. No, the over 30 years of experience and articles I've read, books I've read, other and the study. But that certainly isn't the only in the study. But that certainly isn't the only in the study. But that certainly isn't the only questioning there was some - Mr. Thomas asked with you charge a rush charges on the fible. 6 Do you remember those? Do you remember those questions? 7 A. Yes, sir. 9 A. A bsolutely is. 9 Q. Is it standard in your industry if some casks you to do a quick turnaround on testing that you charge a rush charge?  Page 291  A. A bsolutely. 9 Q. Does your dry cleaners do it, too? 9 Withdraw the question. 11 And why is it that your company would charge a rush fellow. 12 A. Weyes. Absolutely. 13 A. We have to turn away other work, we have to pur other projects on hold, potentially if work of the same thing? 14 A. Absolutely. 15 A. We have to turn away other work, we have to pur other projects on hold, potentially if we get enough of this type of thing, agering some chems, so if's a difficult management decision no how to handle it. 18 Q. Does your employees? 20 A. A bsolutely. 21 Q. Does in turn away other work, we labely on the same thing? 22 A. We have to turn away other work, we labely on the same thing? 23 A. We have to turn away other work, we labely on the same thing? 24 A. We have to turn away other work, we labely on the same thing? 25 A. We have to turn away other work, we labely on the same thing? 26 A. We have to turn away other work, we labely on the same thing? 27 A. We have to turn away other work, we labely on the same thing? 28 A. Absolutely. 29 Q. Does your dry cleaners do it, too? 29 Window the question of the questioning. 29 A. We have to firm a decision on how to handle it. 29 A. We have to furn away other work we labely on the same thing? 29 A. We have to furn away other	1	initially. In fact, they all do at some rate	1	questioning?
Q. And is that knowledge that you just expressed based only upon the studies that you did here, or is that something that you brought with you before this litigation? MR. THOMAS: Object to the form of the question. A. No, the over 30 years of experience and articles I've read, books I've read, other camples I've analyzed, it can be they can lose their antioxidants, as well as we showed it in the study. But that certainly isn't the only reason I believe they're lost. BY MR. ANDERSON: Thomas as to whether or not you should have used sodium hybochlorite in order to clean the materials. Do you remember that part of the questioning? A. Yes. Thomas we showed it in the study. But that certainly isn't the only reason I believe they're lost. BY MR. ANDERSON: Thomas asked you some questions about some rush charges on the bills. Do you remember those? Do you  remember those questions? A. Yes, sir. Do you remember those? Do you  remember those questions? A. Yes, sir. C. Sit standard in your industry if someone asks you to do a quick turnaround on esting that you charge a rush charge?  A. A We have to urn away other work, we same thing? A. A basolutely. C. Do ober your dy cleaners do it, too? Withdraw the question. And why is it that your company would the time? A. A basolutely. C. Do Does your dy cleaners do it, too? Withdraw the question And why is it that your company would charge a rush fee? A. We have to turn away other work, we and thing? A. A basolutely. A. We have to turn away other work, we and thing? A. A basolutely. A. We have to turn away other work, we and thing? A. We have to turn away other work, we are an increase on your workload of your empthen the surface of the meshes that were explanted the single and the first properties.  A. We have to turn away other work, we are an increase on your workload of your empthen the surface of the meshes that were explanted the time? A. Absolutely. A. Absolutely. A. Absolutely. C. Does jou that increase on your workload for your empthen that part of the questioning.			l .	1 0

So they're both still there, both of which indicate oxidation.  Q. You were shown by Mr. Thomas Jordi Exhibit 3, that was this Renaud de Tayrac and Letouzey article.  Do you recall that?  A. Yes, I do.  Q. Were the meshes that were  A. I got it.  Q. Were the meshes that were explanted

74 (Pages 290 to 293)

Page 294 Page 296 1 1 coming from Wistar rats. There's no proof there by any chemical testing. 2 2 Q. From rats, is that what you said? Q. Do you recall during part of your --3 A. Yes. Wistar rats. 3 during part of the questioning by Mr. Thomas, he 4 4 Q. And when animal studies are used in a was asking you whether or not you or someone at 5 preclinical model, do they typically use healthy 5 Jordi Labs performed any analysis on hydrogen 6 6 peroxide or any other products of inflammation rats? 7 7 that may have occurred in the women's tissue 8 Q. Was the explanted tissue coming from 8 before these meshes were explanted? Do you 9 9 these women coming from healthy tissue? remember that part of your testimony? 10 MR. THOMAS: Object to the form of the 10 A. I do. 11 11 auestion. Q. Are you aware of any test out there 12 A. From here, from this figure? 12 that would allow you to look at the products of BY MR. ANDERSON: 13 13 inflammation in and around mesh fibers that have 14 been explanted and put into formalin and shipped 14 Q. From the women whose explanted meshes 15 you looked at. I'll withdraw -- that's okay, 15 to you for analysis? 16 A. Absolutely not, because it's been 16 I'll withdraw the question. 17 washed away. 17 He used D -- well, these authors used 18 18 DMSO as well as ultrasonic treatment in order to Q. Would it matter to your opinions 19 remove what they claim to be just the proteins 19 regarding the degradation of these meshes in 20 from the fibers. 20 this case whether or not hydrogen peroxide was 21 21 Do you recall that? present in the body at that time? 22 22 A. I do. A. No, it would not, because the damage 2.3 23 was observed in SEM and other techniques, like Q. Do you believe that's a scientifically 24 valid method in which to determine what is 24 25 flaking off of the meshes? 25 Q. Do you, to a reasonable degree of Page 295 Page 297 1 A. I do not. medical -- to a reasonable degree of medical 2 2 certainty --Q. And why is that? A. If you use sonication you're using a 3 3 MR. THOMAS: Scientific certainty. 4 battering ram to knock the cracked material off, 4 BY MR. ANDERSON: 5 and so if you knock the material off you're 5 Q. What did I say? Medical? It's been a 6 б removing the very thing that you want to look long day. 7 7 at. They did not -- now, if they had run Doctor, do you have an opinion to a 8 8 infrared or some other technique to look at the reasonable degree of scientific certainty as to 9 structure of the material coming off chemically, 9 whether or not you need to know whether hydrogen 10 it would have been helpful, but none of that was 10 peroxide, superoxides, or any other mediators or 11 done. So it was just blasted clean, and say it 11 inflammatory products that would have been 12 produced in the body were present on the meshes 12 never was polypropylene, but we know it was 13 polypropylene because we looked at it in our 13 by the time you analyzed them in order to 14 particles, and we saw that it was polypropylene. 14 determine whether or not these meshes degraded? 15 Of course it did have some protein in it, but it 15 A. I don't see why we'd need to determine was mostly polypropylene. 16 16 that. 17 Q. So do you find this article to be 17 Q. And why is that? 18 scientifically reliable with regard to whether 18 A. It wouldn't matter. We see the 19 19 or not TVT mesh degrades in women? Do you find degradation, the oxidation has already occurred, 20 this article to be scientifically valid with 20 we don't need to say hydrogen peroxide or 21 21 regard to whether or not the TVT meshes degrade hydroxide radicals at this point, we need to see the chemical damage that's been done to the 22 in women? 22 23 A. I do not. I think -- I'm surprised it 23 material. It either has or has not occurred. 24 was published without some requirement to do 24 Q. Do you recall some questioning by 25 25 structural analysis to prove their claim. Mr. Thomas where you were looking at the FTIR

1	going to cause inflammation, and it's going to	1	to whether or not you found anything in the
2	be a problem.	2	FTIR, evidence of oxidation at band 1730 to
3	MR. THOMAS: Move to strike.	3	1680.
4	BY MR. ANDERSON:	4	Do you recall that?
5	Q. Had these meshes continued to be in	5	A. Yes.
6	these women's bodies, would you strike that.	6	Q. Does it matter to you whether or not
7	Is degradation of polymer, like you've	7	you can find evidence of oxidation in the FTIR
8	seen in this testing, progressive?	8	at 1730 to 1680 in order to hold the opinion
9	MR. THOMAS: Object to form of the	9	that this mesh degraded in this woman's body?
10	question.	10	A. Not really, because the fact is it did
11	A. Yes. It definitely is. It starts on	11	degrade and we saw it in the SEM. That's just
12	the surface and apparently works its way in, as	12	simply a fact.
13	we've seen by SEM-EDX presence of oxygen in the	13	Q. Is all of the testing that was done
14	second underlying layer.	14	for Carolyn Lewis and Linda Batiste contained in
15	BY MR. ANDERSON:	15	the reports that you've provided?
16	Q. So do you have an opinion to a	16	A. Was all of the testing?
17	reasonable degree of scientific certainty as to	17	Q. Is all of the testing that was done at
18	whether or not the longer these mesh fibers are	18	your direction provided in the reports that
19	in the body the more degradation will occur? Do	19	you've given today for both Linda Batiste and
20	you have an opinion on that?	20	Carolyn Lewis?
21	A. I think the data shows that it's going	21	A. Well, with the possible exception of
22	to degrade like the layers of an onion, layer	22	the
23	after layer.	23	Q. Let me see if I can withdraw that.
24	Q. You were asked some questions about	24	Is all the testing that forms the
25	from Mr. Thomas as to whether or not you used a	25	basis of your opinions that the mesh degraded in
	Page 303		Page 305
1	standard over here for polypropylene, for FTIR,	1	Linda Batiste and Carolyn Lewis available in the
2	or a standard over here. Do you remember that	2	reports that you've provided today?
3	part of your questioning?	3	A. Yes.
4	A. Right.	4	MR. THOMAS: Object to the form of the
5	Q. Do you need an FTIR for polypropylene	5	question.
6	sorry. Strike that.	6	BY MR. ANDERSON:
7	Do you need an FTIR standard for	7	Q. In other words, if you wanted to speak
8	polypropylene in order to determine whether or	8	to the results for all of the testing that was
9	not the polypropylene in these meshes oxidized	9	done showing degradation as you've described
10	and degraded?	10	previously here for the jury for Carolyn Lewis
11	A. Absolutely not.	11	and Linda Batiste, you'd be able to point us to
12	Q. Please explain that.	12	each one of those testing as Mr. Thomas went
13	A. Because we have the carbonyl is	13	through with you today, correct?
14	going to show up at 1740, 1730, 17 whatever, 15,	14	MR. THOMAS: Object to form.
15	or 1700 depending on the form, or a mix of all	15	MR. ESTEE: Form.
16	of those, and that's going to be there in a	16	MR. ANDERSON: Form.
17	polypropylene. So if the carbonyl shows up,	17	A. That's correct.
18	it's going to be separate from the bands of the	18	BY MR. ANDERSON:
19	polypropylene. Polypropylene doesn't have any	19	Q. Based on your knowledge, training,
20	bands there.	20	background, experience, your work history with
21	Q. Do you recall, if you could just turn	21	polymers as you described it here today, your
22	to Pages 67 and 69 of your report, you were	22	work as a biochemist and a polymer chemist, and
23	looking at some FTIR micro with Mr. Thomas?	23	all of the materials that you reviewed in this
24	A. Yes.	24	case, including the testing that was done at your direction, do you have an opinion to a
25	Q. And you were asked some questions as	25	voir direction do voirnave an opinion to a
